ABSTRACT

Hollowell, Tom, Lynn J. Gillespie, V.A. Funk, and Carol L. Kelloff. Smithsonian Plant Collections, Guyana: 1989 - 1991, Lynn J. Gillespie. *Contributions from the United States National Herbarium*, volume 44: 104 pages (including 8 plates).- Part I provides the collector's notes on trips in chronological order. Part II lists collection localities, with collection number ranges, habitat descriptions, geographic coordinates, and assisting collectors. Part III consists of maps of Guyana showing collecting localities. Part IV lists collections in numerical order with identifications and authors. Part V lists collections ordered by determined name. The appendix is a personal account by the collector describing some of her experiences while collecting plants in Guyana.

KEY WORDS: Guyana, Botanical Collecting, Nomenclature

DATE OF PUBLICATION: January 2003

Cover Design and Illustrations by Alice Tangerini. Front: *Tragia tabulaemontana* L.J. Gillespie (Euphorbiaceae), from Gillespie, L.J. 1994. Novon 4: 330-338; back: *Phakenetia supraglandulosa* L.J. Gillespie (Euphorbiaceae), from Gillespie, L.J. 1993. Systematic Botany 18: 575-592. Both illustrations also appeared in Gillespie, L.J. & W.S. Armbruster. 1997. Smithsonian Contributions to Botany: 86.

POSTMASTER: Send address changes to Contributions U.S. National Herbarium, Department of Systematic Biology - Botany MRC 166, National Museum of Natural History, Smithsonian Institution, Washington, DC, 20013-7012, USA.

The paper used in this publication meets the minimum requirements of the American National Standard for Permanence of Paper for Printed Library Materials Z39.48--1984.

Contributions from the U.S. National Herbarium was first published in 1890 by The United States Department of Agriculture. From July 1, 1902 forward it was published as a Bulletin of the United States National Museum. The series was discontinued after volume 38, 1974, and has been revived with volume 39, as a venue for publishing longer taxonomic papers, checklists, floras, and monographs, produced by staff and associates at the U.S. National Herbarium. It is externally peer reviewed, and published at irregular intervals. Subscriptions and other correspondence should be addressed to CUSNH, Department of Systematic Biology - Botany MRC 166, National Museum of Natural History, Smithsonian Institution, Washington, DC, 20013-7012, USA e-mail CUSNH@nmnh.si.edu. The present issue is available for free while supplies last.

INTRODUCTION

The Biological Diversity of the Guianas Program

The "Biological Diversity of the Guianas" (BDG) is a field-oriented program of the Smithsonian Institution's (SI) National Museum of Natural History. The goal of the BDG is to study, document and preserve the biological diversity of the Guianas (Guyana, Surinam, and French Guiana). The program has been operating since 1983. It was originally confined to botany within Guyana, which was at that time the least known of the three Guianas. It has since been expanded to include faunal studies, but field work in countries other than Guyana has been minimal to date. In Guyana the BDG operates under the auspices of the University of Guyana (UG) with whom it has a Memorandum of Understanding.

The Guianas are a biologically diverse area, and unlike many other tropical countries, approximately 70% of the natural habitat of the Guianas remains pristine. Most of the land is owned by national governments, most of the people live along the coast, and until recently the destructive development of the interior was kept to a minimum. As a result there is a real possibility that large tracts of extremely interesting forest and their accompanying biota can be conserved. These natural areas are now seriously threatened by resource extraction activities such as practised by Asian logging companies and Brazilian gold miners. It is important that we gain an understanding of the

flora and fauna so that decisions can be made concerning critical areas that have high priority for conservation and so that data can be collected from areas that will ultimately be degraded. In addition, because this region has been long neglected by biologists, it is often an area of "insufficient information" for many biological studies. For many years most collectors bypassed Guyana in particular. The program was designed to provide specimens and data to address biodiversity questions about many groups of organisms for research and conservation projects. This new information is now being used to produce checklists, vegetation maps, and floristic and faunistic studies. In addition, the BDG program is exploring uses of these data that will lead to a synthesis of information addressing broader biodiversity issues and understanding (Funk and Richardson, 2002).

Prior to the BDG's work, Guyana was little known biologically, with sparse documentation of its biota. In 15 years of collecting the BDG Program has produced works important to the understanding of Guyana's biological diversity and in assisting Guyana with conservation efforts. The BDG Program has published a vegetation map of Guyana (Huber et al., 1995), as well as plant checklists for the Guianas (Boggan et al., 1997), the Guyana Shield (Hollowell et al., 2001), the Iwokrama area (Clarke et al., 2001), and Kaieteur National Park (Kelloff and Funk, 1998). It has also published a Checklist of the Birds of Guyana (Braun et al., 2000). Data from the BDG program have been used in many publications; a complete list of

1: Biological Diversity of the Guianas Program, MRC 166, National Museum of Natural History, Smithsonian Institution, Washington DC 20013-7012, USA. 2: Research Division, Canadian Museum of Nature, P.O. Box 3443, Station D, Ottawa, Ontario K1P 6P4, Canada.

these can be found on the program's website at <http://www.mnh.si.edu/biodiversity/bdg/bdgpub.html>.

In addition to these lists, checklists of the herpetofauna and mammals of Guyana can be found on the BDG website, and they will be published by the contributors in the near future.

The BDG fulfills the goals of the Smithsonian Institution by gathering new information and distributing it to encourage production of floras and faunas of poorly known areas; participating in training students and professionals from the host country, supplying data for the identification and preservation of biologically diverse areas; and providing specimens for systematic studies both within the Institution and throughout the world. Although the program operates out of the Smithsonian, we depend on extensive collaborations throughout the world to accomplish our goals. Currently we have over 100 scientists with whom we interact (see our website for a full list of collaborators and other information about the BDG).

From 1986 until 1998 the BDG maintained a resident plant collector in Guyana. More recently the program has had resident butterfly and bird collectors, and there are plans underway to base an ant collector in Guyana. Botanical specimens collected through the program have been distributed to a network of experts for identification and a set of specimens is deposited at UG, the US National Herbarium in Washington DC, and many other botanical institutions. At the time of this publication the BDG program has collected approximately 44,200 numbers, representing over 225,000 individual specimens.

Lynn J. Gillespie

Lynn Gillespie was the third Resident Plant Collector to participate in the BDG Program. Over a nearly 19 month period, she spent 12 months in Guyana and approximately 135 days in the field. She collected 2510 numbers, which were processed by the U.S. National Herbarium at the Smithsonian Institution. This processing included distribution to specialists for determination and to other botanical institutions as part of specimen exchange programs. Currently just over 85% of these plants have

been identified to species. These determinations show that Lynn Gillespie collected over 1200 taxa in 610 genera. Copies of her field notebooks and mounted vouchers for her collections are now in the herbarium housed at the "Centre for the Study of Biological Diversity" at the University of Guyana.

Figure 1. Lynn J. Gillespie cooling off while travelling on the Canje River. Photo C. Kelloff.

Several Guyanese accompanied Gillespie on her collecting trips. Those who assisted with collecting, as recorded on the specimen labels, include: D. Gopaul, L. Kelly with the University of Guyana Forestry Class, H. Lall (Figure 2; name changed to H. Persaud, March 1989), and S. Tiwari. The Guyanese who assisted in Georgetown include M. Ameer and G. Bacchus. Other participants in collecting trips include V. Funk, M.E. Gillespie, R.J. Gillespie, C. Kelloff, T. McDowell, P. Peterson, and D.R. Smart.

The assistance of Dr. George Walcott, Vice-Chancellor of UG, Dr. Indarjit Ramdass, head of the UG Biology department, and the staff at the U.S. Embassy in Georgetown, Guyana was invaluable. Dr. Walcott made the entire operation possible by proving to be the crucial person in developing the project. Dr. Ramdass helped considerably in facilitating field trips and providing logistical support, and the U.S. Embassy helped with handling and shipping of supplies and specimens collected by Gillespie. Without all of their help, the program would not have succeeded.

Dr. Gillespie is an expert in the plant family Euphorbiaceae and is currently a Research Scientist at the Canadian Museum of Nature in Ottawa. Her publications include work on the Euphorbiaceae of Guyana (Gillespie, 1993a;

1993b; 1994; Gillespie and Armbuster, 1997). She continues to collaborate with the BDG program by providing determinations of collections in that family.

Format of Collection Information

These data summarize identification of plants collected by Lynn Gillespie and identified by hundreds of taxonomic specialists. One purpose of this publication is to make the results of this field work widely available to the botanical and conservation community now that over 85% of these collections have been identified and distributed. This publication will also serve as a resource for many herbaria that received sheets of these collections. As is always the case with such endeavors, specialists may revise their determinations of specimens, and data errors are corrected over time. In addition to this publication, the BDG website (see below) with these data will be periodically

updated. This publication is divided into four parts.

Part I presents notes by the collector on the localities, habitats, and events of the collecting trips. The Canje River (Trip 12) section was contributed by Carol Kelloff.

Part II is a detailed account of the localities at which Gillespie made her collections for the BDG program, organized chronologically by trip. The range of numbers for each trip is indicated, as are the dates of the trip. Within each trip, specific localities, as provided by the collector, are listed with their dates for those collections, latitude and longitude coordinates, elevation ranges in meters, habitat descriptions, collection number ranges, and co-collectors. Latitude and longitude are given in degree (°), minute ('), and second (") format. These collections were made before affordable Global Positioning Systems (GPS) were available; coordinates were usually recorded only to the nearest minute and, accuracy varies as locality determinations were made in the field using maps of varying quality.

Part III is a set of maps indicating the localities for each of Gillespie's collecting trips outside of Georgetown. As stated above, the accuracy of these positions is subject to the tools that were available to collectors at the time.

Part IV is a listing of the collections in numerical order. Each number is followed by the determined plant family, plant name including any infraspecific names that are available, and authors of the name. The BDG generally maintains plant name information as submitted by specialists, and these may be checked against the synonymy provided in the *Checklist of the Plants of the Guianas, 2nd Edition* (Boggan et al., 1997), or in the *Preliminary Checklist of the Plants of the Guyana Shield, Volume 1: Acanthaceae - Lythraceae* (Hollowell et al., 2001), both of which are available in hard copy from BDG or online at <http://www.mnh.si.edu/biodiversity/bdg>. In many cases commonly accepted names are listed following the recorded name. The authors of plant names follow standardized abbreviations (Brummitt and Powell, 1992).

Part V is a listing of collections by determined name, sorted by division, family, genus and specific epithets followed by the collection numbers for each name. Specimens not determined to genus are the first listed for each family, and specimens not determined to species are the first listed for each genus. This section is provided to facilitate the location of specimens of interest to specialists.

The Appendix, "Botanical Collecting in Guyana," is a personal account by Lynn Gillespie of the plant collecting experience in Guyana, written to provide the lay reader with a feel for the challenges and satisfactions of field work in Guyana. It also serves as an introduction to the purpose and procedures of collecting botanical specimens and adding them to herbaria.

In general, the first sheet of determined specimens have been distributed to the Centre for the Study of Biological Diversity at the University of Guyana (BRG) with a second sheet deposited at Smithsonian's U.S. National Herbarium (US). Anyone requiring additional information about the distribution of duplicate specimens to other herbaria or about the specialists who participated in the determination of specimens can contact the BDG Program at the US National Herbarium, MRC 166, Smithsonian Institution, Washington DC, 20013-7012 USA.

This is the second publication by the BDG detailing the collections of the program's plant collectors. The first publication covered the collections of John J. Pipoly from 1987 to 1988 (Hollowell et al., 2000). As identification of collections by other BDG field botanists becomes at least 80% complete, additional publications will be issued in this series. This is publication number 63 in the Smithsonian's Biological Diversity of the Guianas Program publication series.

Acknowledgments

The compilation of this collection summary would not have been possible without the work of many people who have assisted the BDG Program over the years, both at the Smithsonian and in Guyana. Among these people are John Boggan, Larry Skog, H. David Clarke, Susan Grose, Marilyn Hansel, Karen Redden, Harry Lall (Persaud), Dyantie Naraine, Naseem Nasir, and George Walcott. We also thank Paul Berry of the University of Wisconsin for his especially constructive suggestions on the manuscript. The multitude of specialists, both past and present, that have helped in the determination of Lynn Gillespie's specimens from Guyana, are listed below.

Contributing Specialists

Bryophytes

Bartramiaceae: A.E. Newton
Bryaceae: A.E. Newton
Dicranaceae: A.E. Newton
Fissidentaceae: R.G. Pursell
Helicophyllaceae: A.E. Newton
Leucobryaceae: A.E. Newton
Orthotrichaceae: B. Allen
Pottiaceae: R. Zander
Pterobryaceae: A.E. Newton
Sematophyllaceae: A.E. Newton

Lycophtyes

Lycopodiaceae: D.B. Lellinger, L.J. Gillespie
Selaginellaceae: D.B. Lellinger, G. McKee

Pteridophytes

Adiantaceae: D.B. Lellinger, J. Prado

PART I: NOTES ON TRIPS

Trips 1-3: Georgetown Vicinity, 19 February to 2 March 1989

These were day trips from Georgetown. The first trip was to the Mahaica area, along the coast east of Georgetown, where collections were made on a beach and in a highly disturbed scrubby area bordering a water conservancy canal. The second two trips were to white sand savanna and evergreen sclerophyllous forest south of Georgetown along the Linden Highway.

Trip 4: Kato - Kaieteur, 17 March to 1 April 1989

The Kato section of the trip was organized and led by BDG collector William J. Hahn. The team included Gillespie, Harry Persaud from the UG Herbarium, Mike Tamessar, the zoologist from the UG Museum, SI mammalogist Don Wilson, and SI herpetologist Bob Reynolds. All arrived in Kato by helicopter on March 10 and were comfortably housed in a temporary medical camp run jointly by the Guyana Defense Force, Ministry of Health and the U.S. Army. Collections were made in the vicinity of Kato and Paramakatoi, both Patamona Amerindian villages, and along the trail connecting the two villages. Following the return from Paramakatoi by helicopter (accompanied by a live Bushmaster in a carry-on bag) and the departure of the medical camp, the team had ample time to explore Kato and its surroundings during the nine-day wait for an expected plane. The rolling, mid-elevation countryside around the village is primarily savanna with scattered small trees (e.g. *Plumeria*), shrubs (e.g. *Bysonima*), and palm stands (*Mauritia flexuosa*). The lower slopes are mostly covered in a low to medium height semi-evergreen forest. The picturesque Chiung River, in a valley just west of Kato, was the favorite bathing spot, and in addition it had a botanically interesting riparian zone with colourful *Norantea* (plate 1) and *Marcgravia* vines. One interesting plant collected here was *Passiflora quelchii* (plate 2), unusual in this genus as a shrub and the first collection record for the Guianas. Plant collections from the Kato-Paramakatoi section of the trip (March 10-28) were made under Hahn's collection number series (5556-5808), with the exception

of those made by Gillespie March 17-19 (such as in figure 3) during Hahn's absence on an organizational trip to Georgetown.

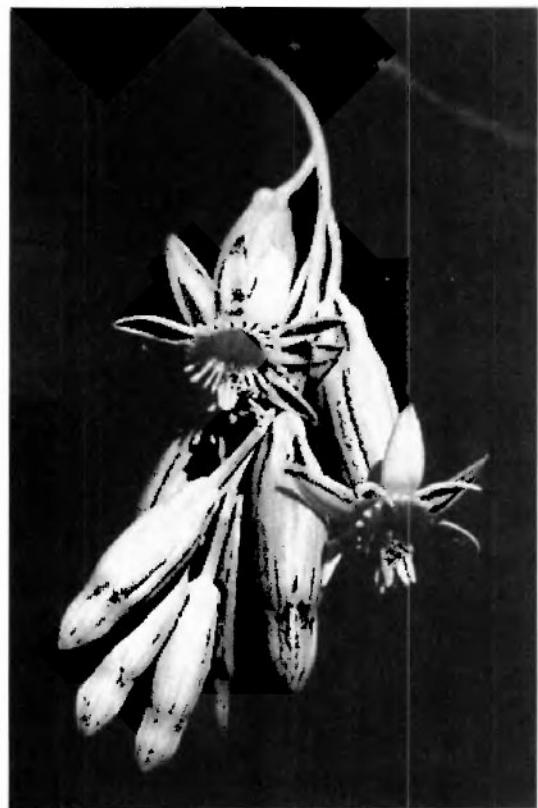

Figure 3. The type specimen of *Passiflora ascidia* Feuillet, collected near Kato Village. Gillespie & Persaud 831.

The team departed Kato by small plane on March 29, sharing the flight with two female traders returning with their hoard of Brazilian toilet paper, soap, and spades. Hahn returned to Georgetown, while the rest of the team was dropped off in Kaieteur National Park. Gillespie took over as leader for the Kaieteur section of the trip (March 29-April 1). The team settled in for a three-night stay at the Resthouse overlooking spectacular Kaieteur Falls (figure 4). The surroundings were a botanist's paradise, with giant mauve bladderworts (*Utricularia humboldtii*, plate 4) emerging from huge terrestrial bromeliads (*Brocchinia micrantha*),

numerous orchids and Rapateaceae (plate 3), to mention just a tiny part of the Park's incredible diversity of plants.

Figure 4. Kaieteur Falls

Trips 5 and 7: Georgetown Vicinity, 14 April and 30 April 1989

These were day trips from Georgetown to the mouth of the Essequibo River, in the region called West Coast Demerara. Collections were made in disturbed forest and scrub near the coast.

Trip 6: Mainstay - Pomeroon River, 20 to 26 April 1989

Gillespie and Harry Persaud departed Georgetown on April 19 for a weeklong trip to Mainstay and the Pomeroon River. They traveled by ferry across the Essequibo Delta to Adventure, and then by taxi north along the coast to Anna Regina, the Administrative Centre of Region 2 (Pomeroon-Supenaam). After obtaining all the necessary permits, they continued on to Mainstay, an Arawak Amerindian village, which was their base for the

next three days. Collections were made in the surrounding white sand forest and by boat in and along the shores of a series of lakes: Mainstay, Capoey and Tapakuma. They returned to Anna Regina where they were based for the next couple of days. One long, enjoyable day was spent collecting from a small speedboat along the margins of a riparian swamp forest on the Pomeroon River, running from Charity 14 miles upriver to the Arapiako River.

Trip 8: Kaieteur, 5 to 8 May 1989

After almost missing a chartered plane, the team departed Georgetown on May 4 for a scenic flight to Kaieteur under clear skies. The team included S. Tiwari (Herbarium, University of Guyana), Ron and Madge Gillespie (the collector's parents from Canada). Soon after arriving, Lynn Gillespie collapsed in the Resthouse with the flu, leaving Tiwari and Ron Gillespie to tackle the plant collecting for the first few days. The numerous bags of plants they hauled in kept Madge and Lynn Gillespie busy pressing and numbering on the Resthouse veranda, with one of the best views in the world. Once recovered, Lynn Gillespie and Tiwari joined the Guesthouse caretakers for a boat trip on the Potaro River and some excellent collecting in the riparian forest. Paddling within sight of the top of Kaieteur Falls, much too close for the collectors' comfort, the water was amazingly calm and peaceful, with the roar of the waterfall and the rising mist not far away. One of the most common riparian shrubs was "whitey" (*Inga serrulifera*, Fabaceae, Mimosoideae), a favorite local edible. The shrubs were laden with plump yellow pods, which have a tasty white flesh around the seeds.

On May 9, the day of departure, the team waited hours beside the tarmac runway surrounded by endemic savanna plants. The plane finally arrived at the far end of the runway, unloaded a huge pile of beer, and almost took off without the team but with a full load of other passengers, until the pilot realized who had actually chartered the plane. After the plane was unloaded for a second time the team piled in for a stormy, rough ride back to the city.

Trip 9: Omaj - Essequibo River, 27 May to 6 June 1989

This 10-day trip (May 26 to June 5) to Omai was organized courtesy of Placer Dome, a gold mining company. Gillespie and Harry Persaud joined geologist Randy Singh for the 4-hour drive south on roads of exponentially decreasing quality. A very narrow, waterlogged track through dense forest finally led to Yaya Landing on the Essequibo River. After waiting out a downpour, the team traveled by boat upstream and across the river to Omai Camp. At the time of the visit Omai was a small mining exploration and survey camp sitting on a rich gold deposit (the gold apparently found in quartz veins of a diorite intrusion). The rolling terrain was explored using the numerous rough tracks and paths that criss-crossed the 36 km² area. Although mostly covered in forest on red lateritic soils, there had been many disturbances by previous small mining activities and selective logging.

Figure 5. The Essequibo River at Omai

There was excellent collecting by boat along the mostly densely forested banks of the Essequibo River. The water level was high, inundating much of the shoreline vegetation. Although few trees or shrubs were flowering, fruits were abundant. The team explored a tributary creek through the inundated forest, where most shrubs and trees grew in over a meter of water and each appeared to harbour a major ant nest. The team members had never seen such a high density of ants on vegetation! Cut branches had to be dunked in the creek to get rid of hundreds of ants, while all had to brush hundreds off of themselves. The seemingly perpetual newspaper shortage once again curtailed collecting for the last couple of days. By the time of departure, Yaya Landing was

underwater. The pickup truck backed into the river, the boat pulled alongside and all jumped aboard for the bumpy ride back to town.

Trip 10: Kanuku Mountains - Rupununi Savanna, 17 June to 7 July 1989

The team included D. Gopaul (Herbarium, University of Guyana), Paul Peterson (Botanist, Poaceae specialist, SI) and Laureen Pierre (Amerindian Research Unit, University of Guyana). After a two-day delay the team finally departed on June 16 in an Islander airplane for a three-week trip in the Rupununi savannas. The destination was Dadanawa, a cattle ranch in the southern Rupununi savannas, but reports of rain and a wet, muddy landing strip forced the plane to land instead at Lethem, administrative centre of Region 9 and the major town of Southern Guyana. Thinking that they would have to stay in Lethem for several days, they were very pleasantly surprised at the unexpected arrival of Sandy deFreitas, co-owner of Dadanawa, who had come to town to shop and meet the team. All squished into the small pickup truck for the 5-hour ride to Dadanawa on a dirt track, crossing numerous creeks on rickety log bridges and through many deep puddles. This was the rainy season in the Rupununi Savannas, the one area of Guyana with very distinct wet and dry seasons.

Comfortably settled into the Dadanawa guesthouse and well fed on beef three times a day, the team explored the surrounding savanna and the riparian zone along the adjacent Rupununi River. Collections were also made in a "bush island", an area of forest on drier, somewhat elevated land, surrounded by savanna. To reach the next destination, Sand Creek Village, Gillespie traveled with the supplies by boat down the Rupununi River, while the others hiked and botanized. The team was based in a small house kindly provided by the village, from where they explored the adjacent, partly flooded savannas. Two schoolboys led the team up Baboon Hill, a granitic rock outcrop with a completely different flora, including cacti, gesneriads (*Sinningia*, plate 5), bromeliads and Gentianaceae. That night, the eve of June 24, the team joined the entire village in their St. John the Baptist celebrations, which involved a large bonfire, running over the bed of glowing coals at the stroke of midnight, all followed by a party

with Brazilian music and salsa dancing. The next day the team set off on a 4-day trip into the southeastern part of the Kanuku Mountains with guides Alcidio, Stanislaus, Christy and Cashmire. They hiked over partly flooded, very muddy savanna, through forest with scattered bush farms, and up densely forested slopes, finally emerging onto an extensive upland savanna. Base camp was established on this dry rolling savanna near a creek bordered by a low gallery forest. One long day was spent exploring nearby Mt. Ishtaban, climbing through mesic forest on the lower slopes to granitic cliffs and an almost impenetrable thicket near the summit.

Figure 6. Plant collecting on the Rupununi Savanna.

On the day of return to Sand Creek, the guides rose very early to return to a patch of *Ischnosiphon* (Marantaceae) seen previously, returning at breakfast time with two new backpack frames (warishis) with which to carry the heavy loads of pressed and preserved plants. For the last part of the trip Gillespie returned to Dadanawa and collected on the surrounding, botanically rich savanna, bush islands and rocky outcrops, while Peterson and Gopaul ventured further south in search of new grasses. Note that grasses collected on this trip are included in Peterson's number series (7495-7646).

Trip 11: Aurora - Cuyuni River, 3 to 20 October 1989

The seventeen day trip to Aurora was organized courtesy of the mining company, Dennison Mines. Departing October 3, at the start of an early rainy season, Gillespie and Tiwari traveled by the large GDF helicopter over the Essequibo River and up the winding, milky brown Cuyuni River for about 110 miles. They

landed at Aurora, an abandoned gold mine that had operated during the 1940's. Dennison had recently established an exploration camp here, the base camp consisting of six large wood frames covered with tarps in a small clearing on the banks of the Cuyuni River. Comfortably settled in, the team explored the surrounding area, a patchwork of mature and disturbed, non-flooded rainforest and seasonally flooded riparian forest (including *Brownea*, plate 8). Each day they ventured further afield on several recently cleared tracks and new survey lines through the forest, usually making it back to camp before the frequent afternoon thunderstorms and heavy downpours. Canopy trees swayed and groaned in the strong winds, with several falling quite close to the team, providing excellent canopy collecting. The team collected extensively by boat in the riparian forests (*Mora*, *Inga*, and *Triplaris*) along the banks of the Cuyuni River and its maze of islands, channels and tributaries.

Departure was delayed several days since the helicopter was not available. Instead, Dennison made arrangements with a local boat captain for the trip back to Georgetown. Early in the morning under cool, gray skies, several Dennison staff members and team departed in a large, open wooden boat for the long trip downriver. Passing numerous gold dredges while sheltering from torrential downpours under tarps, the first part of the trip went smoothly. Then after passing over a series of small rapids, the boat arrived at Kamaria Falls, a long set of rapids. With three large outboard engines at full speed, the laden boat flew off each wave crest, crashing into the next wave, with the spray drenching all aboard. The boat and crew arrived safely in Bartica in the early evening and continued on to Georgetown the following morning.

Trip 12: Canje River, 27 to 31 October 1989

Lynn Gillespie and George Bacchus organized the trip up the Canje River. The team included Gillespie, Carol Kelloff (BDG Program Coordinator), Bacchus (retired surveyor and experienced boatman) and S. Tiwari. Arrangements were made in New Amsterdam for the rental of a boat and engine. After leaving the New Amsterdam vicinity with its sawmills and houses, the team began collecting plants along

the river's edge in what Bacchus called the "new forest area". In order to make the Ikawaru "stelling bon," or boat house, by dark, collecting had to be cut short for the day and the team just watched the river flow by. The next morning they continued up the Canje River. Talking was almost impossible over the roar of the motor, so Bacchus was signaled by hand when the team wanted to stop to collect. Collecting continued along the river until reaching the Digitima Savanna, also locally called the "cow savanna," several miles south of Mora.

Figure 7. *Palicourea rigida* Kunth, on the Canje savannas. Gillespie, Kelloff & Tiwari 2516.

The white sands of this area support a grass/sedge flora with bush islands of scrub and small trees. According to Bacchus, feral cows roamed the savanna. No cows were apparent, but the "cow flop" indicated that they had passed through recently. Although on first inspection the flora of the savanna looked homogeneous, this was not the case. There were actually many micro-habitats and one did not have to travel far to see a new assemblage of herbs. The savanna was extensive, and in the distance the vegetation's color varied. In some instances this indicated a damp depression supporting huge populations of *Bulbostylis* and other sedges. The bush islands also varied. Some were stands of *Mauritia* palms surrounded by a dense growth of ferns, while others were dominated by Fabaceae trees with little understory. One morning a stinkhorn fungus was found growing in cow dung. Its cap had long, thin, pale arms radiating out like those of a brittle starfish; its center was brown and viscous and was visited by many flies. By late morning the heat of the day had withered this stinkhorn to nothing.

Armadillos ran through the grasses of the savanna. The black flies were merciless, constantly flying into every orifice of the face. Their bites did not sting, but by the end of the day any exposed skin was covered with red welts. October is generally a dry month, but the team experienced several light rains. These brought out another group of biting flies called "kabarases". From dusk until dawn these tiny flies bit with such ferocity that all were driven into their mosquito nets. Ant hills, formed of soil piled a foot high and two to three feet wide, dotted the savannas. The "crater" in the center led to a 3 inch hole where ants moved in and out of the nest. Soldiers stood at various points on the nest, moving only at signs of danger. Both termite and ant nests were common on trees and below ground.

On the trip back to New Amsterdam, the team stopped on the other side of the Canje River at another expanse of savanna known as Long Savanna. Here they collected the carnivorous plants *Drosera* and several species of *Utricularia* as well as two species of *Polygala* different from those of Digitima Savanna. More riparian trees were collected while moving down the river. The team spent another night at the Ikawaru stelling bon. Gas for the boat's motor was in short supply, so collecting along the river was discontinued on the last segment of the trip.

Trips 13,14,15: Georgetown Vicinity, 25 November, 1 December and 8 December 1989

Trip 13 was a local collecting trip in Georgetown. Trips 14 and 15 were day trips from Georgetown. The first was to mangrove swamps and disturbed shorelines in the East Coast Demerara area east of Georgetown. The second trip was to dry evergreen forest on white sand along the Soesdyke-Linden Highway south of Georgetown.

Trip 16: Imbaimadai-Karowrieng River, 14 to 29 December 1989

Team members Gillespie, D. Smart (University of California) and camp manager George Bacchus traveled by small plane to Imbaimadai, for an 18 day trip in the northwest Pakaraima Mountains. Imbaimadai, a local gold dredging and panning centre, is located on the upper Mazaruni River in a broad upland valley

surrounded by sandstone mountains. The team first explored the white sand savannas and low evergreen forest surrounding the village. They then traveled by boat up the Karowrieng River to Maipuri Falls (plate 6), where they established a base camp in a clearing below the Falls.

From their base camp, a simple wood frame covered with a tarp, the team explored and collected. The surrounding lower montane forest was wet, lush, and medium-height due to shallow soils, with aroids and Cyclanthaceae common in the understory. South of camp was a shrub savanna on sandstone outcrops. Having explored the area accessible from camp, Gillespie and Smart hiked back to Imbaimadai, collecting along the way, to make arrangements for guides. With two Amerindian guides, the team climbed the steep sandstone escarpment south of camp. Collections were made in an interesting shrub savanna community on top of a large, flat topped, isolated pinnacle on the very dissected escarpment edge. Located on a rock face at the base of the escarpment were the ancient Timehri rock paintings. Following obscure trails through dense wet forest, they explored the mountainous area north and west of camp. Moving quietly through the forest, the team was able to closely approach a Cock-of-the-rock, a spectacular bird endemic to the Guyana region. On their return to Imbaimadai, the team collected along the way in the diverse mosaic of savanna and forest between the Karowrieng and Partang Rivers. From Imbaimadai, the team made a long one-day trip by boat up the Mazaruni River, collecting in the bordering gallery forest.

Trip 17: Ituni Savannas, 16 to 19 January 1990

This was a four day trip to the Ituni Savannas, a southern extension of the "Intermediate Savannas" located southeast of Ituni about 150 km south of Georgetown. The team was comprised of Gillespie, Tiwari, Vicki

Funk and Tim McDowell (the new BDG plant collector). Collections were made in white sand savanna and open forest.

Trips 18 & 19: Kuru-Kuru Creek - Lamaha Canal; Kaietur, 10 to 11 November and 16 to 19 November 1991

Though her full year of work for the Smithsonian ended in January 1990, Gillespie returned to Guyana in November 1991. She made two day trips from Georgetown, the first south to evergreen forest and shrub on white sand, the second east to the Lamaha Canal near Mahaica. A five day trip was made to Kaietur National Park. Collections were made of the riparian vegetation and aquatic plants along the Potaro River, mostly above the Falls, upstream 15 km to the first set of rapids. She also explored the shrub savannas on sandstone bedrock west of the airstrip, where a euphorb tree (*Pera bicolor*, figure 8) was discovered in full bloom, completely covered in small fragrant yellow blossoms (actually pseudanthia made up of tiny staminate flowers enclosed in globose bracts).

Figure 8. Gillespie 4300, *Pera bicolor* (Klotzsch) Müll. Arg. (Euphorbiaceae).

II: COLLECTION LOCALITIES

Trip Number 1 : Flagstaff - Mahaica

Collections: 700-707. 19 February 1989

East coast Demerara, Cane Grove Conservancy, Flagstaff. 19 February 1989.

06°38'N 057°56'W, Elevation 0 m.

Disturbed vegetation. Shrubs and small trees along canal.

Collections: 700 - 706. Collected with S. Tiwari.

Hope Beach, 8 km NW of Mahaica. 19 February 1989.

06°45'N 057°57'W, Elevation 0 m.

Sand beach.

Collections: 707 - 707. Collected with S. Tiwari.

Trip Number 2 : Linden Highway

Collections: 708-763. 24 February 1989

Linden Highway near Kuru Kuru Creek, ±9 km S of Timehri. 24 February 1989.

06°25'N 058°15'W, Elevation 10 to 20 m.

White sand savanna with scattered shrubs and trees.

Collections: 708 - 712. Collected with S. Tiwari; H. Lall.

Linden Highway, between Kuru Kuru Creek and Loo Creek. 24 February 1989.

06°26'N 058°15'W, Elevation 10 m.

Sclerophyllous forest on white sand and road edge.

Collections: 713 - 716. Collected with S. Tiwari; H. Lall.

Linden Highway, near turnoff to St. Cuthbert's Mission. 24 February 1989.

06°28'N 058°16'W, Elevation 5 to 20 m.

Savanna and scrub on white sand.

Collections: 717 - 753. Collected with S. Tiwari; H. Lall.

Near Timehri airport. 24 February 1989.

06°30'N 058°15'W, Elevation 0 to 20 m.

Forest.

Collections: 754 - 763. Collected with S. Tiwari; H. Lall.

Trip Number 3 : Loo Creek

Collections: 764-827. 2 March 1989

3-4 km S of Loo Creek along Linden Highway, ±32 km S of Timehri. 2 March 1989.

06°12'N 058°15'W, Elevation 5 m.

Sclerophyllous forest on white sand.

Collections: 764 - 790. Collected with S. Tiwari.

1-2 km S of Loo Creek on Linden Highway; along forest trail 0-1 km from highway. 2 March 1989.

06°13'N 058°15'W, Elevation 10 to 20 m.

Sclerophyllous forest on white sand.

Collections: 791 - 803. Collected with S. Tiwari.

About 8 km N of Loo Creek along Linden Highway. 2 March 1989.

06°18'N 058°14'W, Elevation 10 to 20 m.

Sclerophyllous forest on white sand.

Collections: 804 - 808. Collected with S. Tiwari.

Near Timehri airport. 2 March 1989.

06°30'N 058°15'W, Elevation 5 to 20 m.

Edge of swamp forest.

Collections: 809 - 827. Collected with S. Tiwari.

Trip Number 4 : Kato - Kaieteur

Collections: 828-992. 17 March 1989 to 1 April 1989

2-3 km N of Kato Village store-airstrip; off Kato-Kurukabaru road. 17 March 1989.

04°41'N 059°48'W, Elevation 690 to 750 m.

Along small forest trail. Low-medium height semi-evergreen forest.

Collections: 828 - 849. Collected with H. Persaud.

1-2 km N of Kato Village store-airstrip; along trail off Kato-Kurukabaru road. 18 March 1989.

04°39'N 059°49'W, Elevation 690 m.

Low-medium height semi-evergreen forest.

Collections: 850 - 868. Collected with H. Persaud.

1-3 km NNE of Kato along trail to Paramakatoi. 19 March 1989.

04°39'N 059°49'W, Elevation 675 m.
 Secondary forest and scrub on steep NE facing hillside.
 Collections: 869 - 879. Collected with H. Persaud.

2-2.5 km W of Kato, along Chiung River just downstream of large waterfall. 25 March 1989.
 04°40'N 059°50'30"W, Elevation 650 to 675 m.
 Riparian forest on steep slope above river.
 Collections: 880 - 891. Collected with H. Persaud.

Kaieteur National Park, between airstrip and escarpment. ENE of airstrip. 29 March 1989.
 05°11'N 059°29'W, Elevation 450 m.
 Savanna.
 Collections: 892 - 920. Collected with H. Persaud.

Kaieteur National Park, between airstrip and escarpment. ENE of airstrip. 30 March 1989.
 05°11'N 059°29'W, Elevation 450 m.
 Savanna.
 Collections: 921 - 957. Collected with H. Persaud.

Kaieteur National Park, 1st 2 km of Tukeit trail, 0-2 km from Guest House. 31 March 1989.
 05°11'N 059°29'W, Elevation 450 m.
 Low-medium evergreen forest.
 Collections: 958 - 988. Collected with H. Persaud.

Kaieteur National Park in the vicinity of the airstrip. 1 April 1989.
 05°11'N 059°29'W, Elevation 450 m.
 Collections: 989 - 992. Collected with H. Persaud.

Trip Number 5 : Naamryck Canal
 Collections: 993-1042. 14 April 1989

Naamryek Canal; ±3.5 km SW of Parika. 14 April 1989.
 06°50'N 058°27'W, Elevation 0 m.
 Disturbed forest and scrub along track by canal.
 Collections: 993 - 1042. Collected with D. Gopaul.

Trip Number 6 : Mainstay - Pomeroon R.
 Collections: 1043-1217. 20 April 1989 to 26 April 1989

Mainstay Village. 20 April 1989.
 07°15'N 058°32'W, Elevation 0 to 20 m.
 Low semi-evergreen forest on white sand. Forest floor dry.
 Collections: 1043 - 1066. Collected with H. Persaud.

Mainstay Lake, along shore opposite Mainstay Village. 21 April 1989.
 07°15'N 058°32'W, Elevation 0 to 10 m.
 Open scrub-forest on white sand.
 Collections: 1067 - 1078. Collected with H. Persaud.

Mainstay Village. 21 April 1989.
 07°15'N 058°32'W, Elevation 0 to 10 m.
 Collections: 1079 - 1086 ; 1099-1105. Collected with H. Persaud.

Mainstay Lake. 21 April 1989.
 07°15'N 058°32'W, Elevation 0 to 10 m.
 Marsh.
 Collections: 1087 - 1098. Collected with H. Persaud.

Mainstay Lake; shore opposite Mainstay Village. 21 April 1989.
 07°15'N 058°32'W, Elevation 0 to 10 m.
 Forest on white sand.
 Collections: 1106 - 1111. Collected with H. Persaud.

Red Lock ± 5 km WSW of Anna Regina. 22 April 1989.
 07°14'N 058°31'W, Elevation 0 to 10 m.
 Disturbed scrub along canal bank.
 Collections: 1112 - 1112. Collected with H. Persaud.

Capoey Lake, near dam at E end, ±5 km W of Queenstown. 22 April 1989.
 07°12'N 058°32'W, Elevation 0 to 10 m.
 Collections: 1113 - 1114. Collected with H. Persaud.

Capoey Mission, west shore of Capoey Lake, ±5 km W of Queenstown. 22 April 1989.
 07°12'N 058°32'W, Elevation 0 to 10 m.

- Beach, on dry white sand.
Collections: 1115 - 1139. Collected with H. Persaud.
- Capoey Lake, dam at eastern end, ±5 km W of Queenstown. 22 April 1989.
07°12'N 058°32'W, Elevation 0 to 10 m.
Collections: 1140 - 1141. Collected with H. Persaud.
- Main canal, between Capoey Lake and Red Lock. 22 April 1989.
07°13'N 058°31'W, Elevation 0 to 10 m.
Forest edge along canal.
Collections: 1142 - 1144. Collected with H. Persaud.
- Mainstay Village. 23 April 1989.
07°15'N 058°32'W, Elevation 0 to 10 m.
Collections: 1145 - 1146. Collected with H. Persaud.
- Aruka, SW shore of Tapakuma Lake. 23 April 1989.
07°15'N 058°34'W, Elevation 0 to 10 m.
Low moist forest.
Collections: 1147 - 1154. Collected with H. Persaud.
- Tapakuma Lake. 23 April 1989.
07°15'N 058°34'W, Elevation 0 to 10 m.
Marsh at southern end.
Collections: 1155 - 1160. Collected with H. Persaud.
- Wyaka, SE shore of Tapakuma Lake. 23 April 1989.
07°15'N 058°33'W, Elevation 0 to 10 m.
Low-medium evergreen forest. Soil-brown sand with some clay.
Collections: 1161 - 1168. Collected with H. Persaud.
- Along road between Wyaka and Mainstay. 23 April 1989.
07°15'N 058°32'W, Elevation 0 to 10 m.
Low-medium evergreen forest. Soil-brown sand with some clay.
Collections: 1169 - 1169. Collected with H. Persaud.
- Anna region, along canal by rice mill. 23 April 1989.
- 07°01'N 058°29'W, Elevation 0 m.
Collections: 1170 - 1170. Collected with H. Persaud.
- Pomeroon River between Charity and Araplako River. 24 April 1989.
07°23'N 058°36'W, Elevation 0 m.
Swamp forest bordered by Rhizophora & Montrichardia.
Collections: 1171 - 1205. Collected with H. Persaud.
- Araplako River, near confluence with Pomeroon River. 24 April 1989.
07°15'N 058°38'W, Elevation 0 m.
Collections: 1206 - 1208. Collected with H. Persaud.
- Vicinity of Charity, trail along Pomeroon R, just N of Charity. 25 April 1989.
07°23'N 058°36'W, Elevation 0 m.
Narrow strip of swamp forest. Between river and cultivated land.
Collections: 1209 - 1212. Collected with H. Persaud.
- Adventure. 26 April 1989.
07°05'N 058°29'W, Elevation 0 m.
Roadside scrub.
Collections: 1213 - 1217. Collected with H. Persaud.
- Trip Number 7 : West Coast Demerara**
Collections: 1218-1228.30 April 1989
- Between Uitvlugr and Tuschen. 30 April 1989.
06°52'N 058°18'W, Elevation 0 m.
Disturbed forest along old road by coast.
Collections: 1218 - 1221. Collected with M.E. Gillespie; R.J. Gillespie.
- Naamryek Canal, 3.5 km SW of Parika. 30 April 1989.
06°50'N 058°27'W, Elevation 0 m.
Disturbed forest & scrub along coast at canal entrance.
Collections: 1222 - 1228. Collected with M.E. Gillespie; R.J. Gillespie.
- Trip Number 8 : Kaieteur**
Collections: 1229-1402. 5 May 1989 to 8 May 1989

- Kaieteur National Park, S of guest house. 5 May 1989.
 05°10'30"N 059°29'W, Elevation 420 to 450 m.
 Low evergreen forest.
 Collections: 1229 - 1279. Collected with S. Tiwari; M.E. Gillespie; R.J. Gillespie.
- Kaieteur National Park. Trail between guest house and Johnson's View. 6 May 1989.
 05°10'30"N 059°29'W, Elevation 420 to 450 m.
 Collections: 1280 - 1296. Collected with S. Tiwari; M.E. Gillespie; R.J. Gillespie.
- Kaieteur National Park. 6 May 1989.
 05°10'30"N 059°29'W, Elevation 420 to 450 m.
 Wet, low evergreen forest on white sand.
 Collections: 1297 - 1320. Collected with S. Tiwari; M.E. Gillespie; R.J. Gillespie.
- Kaieteur National Park. 7 May 1989.
 05°10'30"N 059°29'W, Elevation 420 to 450 m.
 Plants growing in crack in rock cliff by falls.
 Collections: 1321 - 1352. Collected with S. Tiwari; M.E. Gillespie; R.J. Gillespie.
- Kaieteur National Park, along Potaro R., 0.5-2 km upstream of Kaieteur Falls. 8 May 1989.
 05°10'30"N 059°29'W, Elevation 420 m.
 Riparian forest along black water river.
 Collections: 1353 - 1389. Collected with S. Tiwari; M.E. Gillespie; R.J. Gillespie.
- Kaieteur National Park. 8 May 1989.
 05°10'30"N 059°29'W, Elevation 420 m.
 Forest trail through disturbed evergreen forest.
 Collections: 1390 - 1395. Collected with S. Tiwari; M.E. Gillespie; R.J. Gillespie.
- Kaieteur National Park, S of guest house. 8 May 1989.
 05°10'30"N 059°29'W, Elevation 420 to 450 m.
 Evergreen forest.
 Collections: 1396 - 1402. Collected with S. Tiwari; M.E. Gillespie; R.J. Gillespie.
- Trip Number 9 : Omai - Essequibo River**
 Collections: 1403-1602. 27 May 1989 to 6 June 1989
- Essequibo R., between Omai and Dennison Mine Camp (near Kumaka River). 27 May 1989.
 05°21'N 058°45'W, Elevation 10 to 15 m.
- Partly inundated riparian forest. Dominated by tall evergreens.
 Collections: 1403 - 1436. Collected with H. Persaud.
- Essequibo River near Dennison Mine camp. 27 May 1989.
 05°21'N 058°48'W, Elevation 10 to 15 m.
 Tall evergreen forest.
 Collections: 1437 - 1439. Collected with H. Persaud.
- Essequibo River between Omai and Dennison Mine Camp, near Kumaka Falls. 28 May 1989.
 05°21'N 058°45'W, Elevation 10 to 15 m.
 Partly inundated riparian forest, tall evergreen.
 Collections: 1440 - 1466. Collected with H. Persaud.
- Omai, along Main Access Road between Essequibo R. and first clearing. 29 May 1989.
 05°26'N 058°46'W, Elevation 30 to 60 m.
 Tall evergreen forest on red laterite.
 Collections: 1467 - 1492. Collected with H. Persaud.
- Omai, SW clearing. 30 May 1989.
 05°26'N 058°46'W, Elevation 30 m.
 Edge of disturbed evergreen forest on red laterite.
 Collections: 1493 - 1498. Collected with H. Persaud.
- Omai, track between SW clearing and Omai River. 30 May 1989.
 05°26'N 058°46'W, Elevation 30 m.
 Forest on red laterite.
 Collections: 1499 - 1501. Collected with H. Persaud.
- Omai, First Clearing. 30 May 1989.
 05°26'N 058°46'W, Elevation 45 to 55 m.
 Secondary vegetation of shrubs and small trees.
 Red laterite.
 Collections: 1502 - 1504. Collected with H. Persaud.
- Omai, "Ridge Road" between Main Access Road and Gilt Creek. 30 May 1989.
 05°26'N 058°46'W, Elevation 45 to 60 m.
 Tall evergreen forest on red laterite.
 Collections: 1505 - 1507. Collected with H. Persaud.

Omai, off "Ridge Road", near Gilt Creek. 30 May 1989.
 05°26'N 058°46'W, Elevation 45 to 60 m.
 Tall evergreen forest on red laterite.
 Collections: 1508 - 1525. Collected with H. Persaud.

Omai, Red Hill Clearing. 31 May 1989.
 05°26'N 058°46'W, Elevation 45 to 59 m.
 Secondary vegetation of shrubs and scattered trees. Red laterite.
 Collections: 1526 - 1529. Collected with H. Persaud.

Omai, track between Red Hill Clearing and Omai River. 31 May 1989.
 05°26'N 058°46'W, Elevation 30 to 60 m.
 Tall evergreen forest. Moist shady bank. Red laterite.
 Collections: 1530 - 1545. Collected with H. Persaud.

Essequibo River, 6-8 km downstream of Omai. 1 June 1989.
 05°26'N 058°42'W, Elevation 10 to 15 m.
 Inundated forest along small tributary creek.
 Collections: 1546 - 1583. Collected with H. Persaud.

Omai, along track on ridge between Main Access Road and Dunclair Pond. 2 June 1989.
 05°26'N 058°46'W, Elevation 50 to 100 m.
 Tall evergreen forest on red laterite.
 Collections: 1584 - 1592. Collected with H. Persaud.

Omai, along track on ridge between Main Access Road and Dunclair Pond. 3 June 1989.
 05°26'N 058°46'W, Elevation 50 to 100 m.
 Tall evergreen forest on red laterite.
 Collections: 1593 - 1594. Collected with H. Persaud.

Omai, along Main Access Road, between Essequibo River and first clearing. 3 June 1989.
 05°26'N 058°46'W, Elevation 30 to 60 m.
 Forest on red laterite.
 Collections: 1595 - 1601. Collected with H. Persaud.

Omai, along track on ridge between Main Access Rd. and Dunclair Pond. 4 June 1989.
 05°26'N 058°46'W, Elevation 50 to 100 m.

Forest on red laterite.
 Collections: 1602 - 1602. Collected with H. Persaud.

Trip Number 10 : Kanuku Mountains - Rupununi Savanna

Collections: 1603-2041. 17 June 1989 to 7 July 1989

South Rupununi savanna, Dadanawa. 17 June 1989.
 02°50'N 059°31'W, Elevation 100 to 120 m.
 Riparian woodland and scrub along Rupununi River. Sandy soil.
 Collections: 1603 - 1651. Collected with D. Gopaul; P. Peterson.

Rupununi savanna, Natun Bush Island, ±2 km SSW of Dadanawa. 18 June 1989.
 02°49'N 059°28'W, Elevation 120 to 150 m.
 Small creek near "bush island".
 Collections: 1652 - 1699. Collected with D. Gopaul; P. Peterson.

Sand Creek Village, 3 km E of junction of Rupununi & Katawau Rivers. 1 km S of village. 21 June 1989.
 03°00'N 059°31'W, Elevation 100 m.
 Partially inundated savanna. White sand-clay soil.
 Collections: 1700 - 1715. Collected with D. Gopaul; P. Peterson.

Baboon Hill, ±1.5 km S of Sand Creek Village. 21 June 1989.
 03°00'N 059°31'W, Elevation 120 to 150 m.
 East slope. Forest-savanna edge, with large scattered rock outcrops.
 Collections: 1716 - 1741. Collected with D. Gopaul; P. Peterson.

Sand Creek Village. Between village and Katiwau River. 22 June 1989.
 03°00'N 059°31'W, Elevation 120 to 150 m.
 Savanna.
 Collections: 1742 - 1752 ; 1772a, 1772b.
 Collected with D. Gopaul; P. Peterson.

Sand Creek Village. Along Katiwau River. 22 June 1989.
 03°00'N 059°31'W, Elevation 120 to 150 m.
 Gallery forest.

- Collections: 1753 - 1771. Collected with D. Gopaul; P. Peterson.
- Rupununi savannas, Baboon Hill (Sabrina Tau) 1.5 km S of Sand Creek Village. 23 June 1989. 03°00'N 059°31'W, Elevation 330 m. Open rock slab on hilltop surrounded by forest. Collections: 1773 - 1804. Collected with D. Gopaul; P. Peterson.
- SE Kanuku Mts; trail near upper part of Tuluwau River. 24 June 1989. 03°02'N 059°26'W, Elevation 250 to 300 m. Collections: 1805 - 1805. Collected with D. Gopaul; P. Peterson.
- SE Kanuku Mts; ±8 km E of Witaru Falls on Rupununi River. 24 June 1989. 03°04'N 059°25'W, Elevation 250 to 300 m. Collections: 1806 - 1806. Collected with D. Gopaul; P. Peterson.
- SE Kanuku Mts. 25 June 1989. 03°04'N 059°25'W, Elevation 250 to 350 m. Collections: 1807 - 1870. Collected with D. Gopaul; P. Peterson.
- SE Kanuku Mts; Mt. Ishtaban. 26 June 1989. 03°01'30"N 059°25'W, Elevation 300 to 500 m. Forest on lower slopes. Collections: 1871 - 1884. Collected with D. Gopaul; P. Peterson.
- SE Kanuku Mts; Mt. Ishtaban, upper slopes. 26 June 1989. 03°01'30"N 059°25'W, Elevation 500 to 700 m. Igneous rock outcrops. Collections: 1885 - 1895. Collected with D. Gopaul; P. Peterson.
- SE Kanuku Mts; Mt. Ishtaban, lower slopes. 26 June 1989. 03°01'30"N 059°25'W, Elevation 300 to 500 m. Forest. Collections: 1896 - 1897. Collected with D. Gopaul; P. Peterson.
- SE Kanuku Mts; Mt. Ishtaban. At foot of N side of mountain. 26 June 1989. 03°01'30"N 059°25'W, Elevation 300 m. Dry upland savanna. Collections: 1898 - 1905. Collected with D. Gopaul; P. Peterson.
- SE Kanuku Mts, Mt. Ishtaban. Upper slope of mountain. 26 June 1989. 03°01'30"N 059°25'W, Elevation 500 to 700 m. Collections: 1906 - 1908 ; 1924 - 1925. Collected with D. Gopaul; P. Peterson.
- SE Kanuku Mts, Culikdap Savanna. 27 June 1989. 03°04'N 059°25'W, Elevation 250 m. Wet savanna near stream. Collections: 1909 - 1923 ; 1926. Collected with D. Gopaul; P. Peterson.
- SE Kanuku Mts near upper part of Tuluwau River. 28 June 1989. 03°02'N 059°26'W, Elevation 150 to 300 m. Forest on steep slope. Collections: 1927 - 1932. Collected with D. Gopaul; P. Peterson.
- Rupununi Savanna, Dadanawa. 1 July 1989. 02°50'N 059°31'W, Elevation 100 to 120 m. Savanna. Collections: 1933 - 1942.
- 0.4 km N of Dadanawa. Along Rupununi River. 1 July 1989. 02°50'N 059°31'W, Elevation 100 to 120 m. Gallery forest and scrub along river. Collections: 1943 - 1949.
- Savanna, between Dadanawa and Mt. Darukoban. 1 July 1989. 02°50'N 059°31'W, Elevation 100 to 120 m. Collections: 1950 - 1950.
- Darukoban Mountain; 5 km NNE of Dadanawa; lower west-facing slope. 1 July 1989. 02°52'N 059°29'W, Elevation 150 to 300 m. Trees and shrubs along dry creek. Collections: 1951 - 1956.
- Rupununi Savanna, Tup-Tup lalli, ±4 km W of Wichabai. 2 July 1989. 02°52'N 059°33'W, Elevation 120 to 200 m. Savanna. Collections: 1957 - 1968.
- Rupununi Savanna, Towatawan Mt, 11 km E of Dadanawa. 3 July 1989. 02°49'30"N 059°25'W, Elevation 250 m. Granitic rock outcrop on hilltop. Collections: 1969 - 1991.

Lethem. Along tributary creek of Takutu River. 6 July 1989.

03°24'N 059°45'W, Elevation 100 to 120 m.

Riparian scrub along creek.

Collections: 1992 - 2004. Collected with D.

Gopaul.

Lethem. 6 July 1989.

03°24'N 059°45'W, Elevation 100 to 120 m.

Savanna.

Collections: 2005 - 2007. Collected with D.

Gopaul.

Lethem; private garden of Mrs. Edwinn Melville. 6 July 1989.

03°24'N 059°45'W, Elevation 100 to 120 m.

Collections: 2008 - 2019.

Kuma, ±15 km SE of Lethem, foot of Kanuku Mountains. 7 July 1989.

03°16'N 059°43'W, Elevation 120 to 150 m.

Savanna.

Collections: 2020 - 2041. Collected with D.

Gopaul.

Trip Number 11 : Aurora - Cuyuni River

Collections: 2042-2408. 3 October 1989 to 20 October 1989

Aurora, Cuyuni River, 180 km upstream from mouth; vicinity of camp. 3 October 1989.
06°47'30"N 059°44'30"W, Elevation 60 m.
Disturbed scrub and lowland evergreen forest edge. Light brown alluvial soil, with some sand.
Collections: 2042 - 2056. Collected with S. Tiwari.

Aurora, 180 km. upstream on Cuyuni R; along track 0-1 km S of camp. 4 October 1989.
06°47'30"N 059°44'30"W, Elevation 60 to 90 m.
Semi-disturbed tall evergreen forest.
Collections: 2057 - 2077. Collected with S. Tiwari.

Aurora, helicopter landing site, 0.3 km S of camp. 4 October 1989.
06°47'30"N 059°44'30"W, Elevation 60 m.
Edge of disturbed tall evergreen forest.
Collections: 2078 - 2084. Collected with S. Tiwari.

Aurora, along track 0-1 km S of camp. 4 October 1989.

06°47'30"N 059°44'30"W, Elevation 60 to 75 m.

Semi-disturbed tall evergreen forest. Volcanic greenstone.

Collections: 2085 - 2104. Collected with S. Tiwari.

Aurora, Madd Kiss Hill, ±1 km S of camp. 5 October 1989.

06°47'30"N 059°44'30"W, Elevation 75 to 90 m.

Semi-disturbed tall evergreen forest.

Collections: 2105 - 2118. Collected with S. Tiwari.

Aurora, along track 0-1 km S of camp. 5 October 1989.

06°47'30"N 059°44'30"W, Elevation 60 to 75 m.

Secondary scrub at forest edge.

Collections: 2119 - 2122. Collected with S. Tiwari.

Aurora, vicinity of camp. 5 October 1989.

06°47'30"N 059°44'30"W, Elevation 60 m.

Open secondary scrub.

Collections: 2123 - 2126. Collected with S. Tiwari.

Aurora, ±3 km S of camp. 6 October 1989.

06°47'30"N 059°44'30"W, Elevation 70 m.

Swamp forest with *Mora excelsa* dominant. Lianas and bryophytes abundant.

Collections: 2127 - 2136. Collected with S. Tiwari.

Aurora, along track 1-3 km S of camp. 6 October 1989.

06°47'30"N 059°44'30"W, Elevation 60 m.

Disturbed evergreen forest.

Collections: 2137 - 2156. Collected with S. Tiwari.

Aurora, ±0.3 km S of camp, just E of helicopter landing site. 7 October 1989.

06°47'30"N 059°44'30"W, Elevation 60 m.

Swamp forest, *Mora excelsa* dominant. Alluvial soil.

Collections: 2157 - 2166. Collected with S. Tiwari.

Aurora, along track ±0.5 km S of camp. 7 October 1989.

06°47'30"N 059°44'30"W, Elevation 60 m.

- Disturbed Mora swamp forest.
Collections: 2167 - 2176. Collected with S. Tiwari.
- Aurora, ±2 km S of camp. 7 October 1989.
06°47'30"N 059°44'30"W, Elevation 70 m.
Mora swamp forest.
Collections: 2177 - 2180. Collected with S. Tiwari.
- Aurora, along track 0-2 km S of camp. 7 October 1989.
06°47'30"N 059°44'30"W, Elevation 60 to 90 m.
Disturbed tall evergreen forest.
Collections: 2181 - 2185. Collected with S. Tiwari.
- Cuyuni R., between Aurora and ±4 km upstream (S bank). 8 October 1989.
06°47'30"N 059°44'30"W, Elevation 60 m.
Mora swamp forest bordered by riparian forest.
Inga spp; *Triplaris surinamensis*, *Montrichardia*.
sp
Collections: 2186 - 2214. Collected with S. Tiwari.
- Aurora, 0-1.5 km S of camp along track. 9 October 1989.
06°47'30"N 059°44'30"W, Elevation 60 to 75 m.
Secondary scrub and forest.
Collections: 2215 - 2231. Collected with S. Tiwari.
- Cuyuni R., between Aurora and ±7 km upstream. 10 October 1989.
06°47'30"N 059°44'30"W, Elevation 60 m.
Riparian forest (*Inga* spp., *Triplaris surinamensis*).
Collections: 2232 - 2271. Collected with S. Tiwari.
- Aurora, old mine site on Alec Hill, ±1 km S of camp. 10 October 1989.
06°47'30"N 059°44'30"W, Elevation 75 m.
Disturbed evergreen forest.
Collections: 2272 - 2272. Collected with S. Tiwari.
- Aurora, 2-4 km S of camp (along track & 10,000 line). 11 October 1989.
06°47'30"N 059°44'30"W, Elevation 75 to 90 m.
Evergreen forest; *Clathrotropis* sp. very common. Also *Lecythidaceae*.
- Collections: 2273 - 2283. Collected with S. Tiwari.
- Aurora, 2-3 km S of camp. 11 October 1989.
06°47'30"N 059°44'30"W, Elevation 60 to 75 m.
Mora swamp forest.
Collections: 2284 - 2286. Collected with S. Tiwari.
- Aurora, vicinity of camp. 11 October 1989.
06°47'30"N 059°44'30"W, Elevation 60 m.
Mora swamp forest.
Collections: 2287 - 2287. Collected with S. Tiwari.
- Aurora, creek ±1 km WSW of camp. 12 October 1989.
06°47'30"N 059°44'30"W, Elevation 70 to 75 m.
Terra firme forest.
Collections: 2288 - 2294. Collected with S. Tiwari.
- Aurora, 0.5 km WSW of camp. 12 October 1989.
06°47'30"N 059°44'30"W, Elevation 70 m.
Gap in Mora swamp forest (large tree fall).
Collections: 2295 - 2305. Collected with S. Tiwari.
- Aurora, 0-1 km WSW of camp. 12 October 1989.
06°47'30"N 059°44'30"W, Elevation 70 to 80 m.
Evergreen forest.
Collections: 2306 - 2314. Collected with S. Tiwari.
- Cuyuni River, between Aurora & Takar-opati Island (6 mi. downstream of Aurora). 13 October 1989.
06°47'30"N 059°43'W, Elevation 60 m.
Riparian forest with *Triplaris surinamensis*, *Inga* spp. and *Mora excelsa*.
Collections: 2315 - 2356. Collected with S. Tiwari.
- Aurora, vicinity of camp. 14 October 1989.
06°47'30"N 059°44'30"W, Elevation 60 m.
Forest edge.
Collections: 2357 - 2361. Collected with S. Tiwari.
- Julian Ross Itabu River, 2-7 km upstream off Cuyuni R, mouth of Haimaralli Falls. 15 October 1989.

06°47'30"N 059°44'30"W, Elevation 60 m.
Riparian forest of *Mora excelsa*, *Triplaris surinamensis*. Also *Inga* spp.

Collections: 2362 - 2375. Collected with S. Tiwari.

Aurora, across river from camp. 15 October 1989.

06°47'30"N 059°44'30"W, Elevation 60 m.
Riparian forest of *Mora excelsa*, *Triplaris surinamensis*. Also *Inga* spp.

Collections: 2376 - 2377. Collected with S. Tiwari.

Aurora, vicinity of camp. 15 October 1989.

06°47'30"N 059°44'30"W, Elevation 60 m.
Riparian forest of *Mora excelsa*, *Triplaris surinamensis*. Also *Inga* spp.

Collections: 2378 - 2378. Collected with S. Tiwari.

Aurora, main track, 2-3.5 km S of camp. 16 October 1989.

06°47'30"N 059°44'30"W, Elevation 75 to 90 m.
Terra firma forest, upland evergreen forest.
Collections: 2379 - 2383. Collected with S. Tiwari.

Aurora, creek ±1 km WSW of camp, 1 km W of camp along 10,400 line. 16 October 1989.

06°47'30"N 059°44'30"W, Elevation 70 m.
Growing on rocks along creek, upland evergreen forest.
Collections: 2384 - 2387. Collected with S. Tiwari.

Aurora, main track, 0-1 km S of camp. 18 October 1989.

06°47'30"N 059°44'30"W, Elevation 60 to 75 m.
Secondary forest.
Collections: 2388 - 2391. Collected with S. Tiwari.

Aurora, 1-2 km SSW of camp, (1-2 km along 10,400 line). 19 October 1989.

06°47'30"N 059°44'30"W, Elevation 70 to 120 m.
Evergreen forest.
Collections: 2392 - 2400. Collected with S. Tiwari.

Aurora, vicinity of camp. 19 October 1989.

06°47'30"N 059°44'30"W, Elevation 60 m.
Secondary scrub, path edge.

Collections: 2401 - 2401. Collected with S. Tiwari.

Cuyuni River, Matope Falls. 20 October 1989.
06°40'N 059°00'W, Elevation 40 to 50 m.
Riparian scrub growing on rock outcrop beside rapids.

Collections: 2402 - 2408. Collected with S. Tiwari.

Trip Number 12 : Canje River

Collections: 2409-2607. 27 October 1989 to 31 October 1989

Canje River near Black Bush canal. 27 October 1989.

06°05'N 057°22'W, Elevation 0 to 10 m.
Avicennia (black mangrove), *Montrichardia* dominants. Also *Machaerium lunatum*.
Collections: 2409 - 2418. Collected with C. Kelloff; S. Tiwari.

Canje River between Baracara and Ikuruwa. 27 October 1989.

05°45'N 057°27'W, Elevation 0 to 10 m.
Riparian forest.
Collections: 2419 - 2427. Collected with C. Kelloff; S. Tiwari.

Canje River between Ikuruwa and Mora (165 km. up Canje R.). 28 October 1989.

05°52'N 057°29'W, Elevation 0 to 20 m.
Riparian forest.

Collections: 2428 - 2453. Collected with C. Kelloff; S. Tiwari.

Digitima Savanna, Canje River ±20 km S of Mora, 185 km from mouth of Canje. 29 October 1989.

05°33'N 057°40'W, Elevation 10 to 20 m.
Savanna, many bush islands.

Collections: 2454 - 2514. Collected with C. Kelloff; S. Tiwari.

Digitima Savanna, Canje River, ±185 km from mouth of Canje. 30 October 1989.

05°33'N 057°40'W, Elevation 10 to 20 m.
Savanna.

Collections: 2515 - 2575. Collected with C. Kelloff; S. Tiwari.

Upper Canje River, between Digitima savanna and Mora Creek. 31 October 1989.

05°33'N 057°40'W, Elevation 5 to 20 m.

Riparian forest.

Collections: 2576 - 2591. Collected with C. Kelloff; S. Tiwari.

Southern end of Long Savanna; upper Canje River (175-180 km from mouth). 31 October 1989.

05°35'N 057°38'W, Elevation 5 to 20 m.

Savanna.

Collections: 2592 - 2606. Collected with C. Kelloff; S. Tiwari.

Canje River, near Black Bush Canal. 31 October 1989.

06°05'N 057°22'W, Elevation 0 to 10 m.

Mangrove riparian forest: *Avicennia germinans*, *Machaerium lunatum*, *Montrichardia arborescens* dominants

Collections: 2607 - 2607. Collected with C. Kelloff; S. Tiwari.

Trip Number 13 : Georgetown

Collections: 2608-2615. 25 November 1989

Georgetown; near Pegasus Hotel. 25 November 1989.

06°49'N 058°10'W, Elevation 0 m.

Sand beach along seawall.

Collections: 2608 - 2612.

Georgetown; behind seawall near Pegasus Hotel. 25 November 1989.

06°49'N 058°10'W, Elevation 0 m.

Grassy slope; waste ground.

Collections: 2613 - 2614.

Georgetown; along canal near National Park. 25 November 1989.

06°49'N 058°10'W, Elevation 0 m.

Collections: 2615 - 2615.

Trip Number 14 : Kitty - Mahaica Area

Collections: 2616-2626. 1 December 1989

Kitty Foreshore, Georgetown. 1 December 1989.

06°49'N 058°08'W, Elevation 0 m.

Mangrove swamp. *Avicennia germinans* and *Thespesia populnea* dominants.

Collections: 2616 - 2621. Collected with L. Kelly; U.G. Forestry Class.

Lusignan, ±14 k E of Georgetown. 1 December 1989.

06°48'N 058°02'W, Elevation 0 m.

Collections: 2622 - 2623. Collected with L. Kelly; U.G. Forestry Class.

Cottage Canal, between Main Road and coast, ±10 k SW of Mahaica. 1 December 1989.

06°37'N 057°50'W, Elevation 0 m.

Canal bank in extensive black mangrove swamp. (*Avicennia germinans*).

Collections: 2624 - 2626. Collected with L. Kelly; U.G. Forestry Class.

Trip Number 15 : Soesdyke - Linden Highway

Collections: 2627-2659. 8 December 1989

Near Soesdyke. 8 December 1989.

06°33'N 058°13'W, Elevation 0 m.

Roadside.

Collections: 2627 - 2633.

Vicinity of Kuru Kuru Creek along the Soesdyke-Linden Highway. 8 December 1989.

06°24'N 058°13'W, Elevation 10 to 20 m.

Dry evergreen forest on white sand; forest edge. Collections: 2634 - 2652.

Soesdyke-Linden Hwy, 2-3 km SW of Timehri airport at junction of minor road. 8 December 1989.

06°28'N 058°13'W, Elevation 0 to 20 m.

Dry evergreen forest on white sand.

Collections: 2653 - 2659.

Trip Number 16 : Imbaimadai - Karowrieng River

Collections: 2660-2955. 14 December 1989 to 29 December 1989

Imbaimadai, between Imbaimadai and Partang River crossing. 14 December 1989.

05°42'N 060°17'W, Elevation 570 m.

White sand savanna.

Collections: 2660 - 2672. Collected with D.R. Smart.

- Imbaimadai, Partang River crossing, 1 km from mouth. 14 December 1989.
 05°42'N 060°16'30"W, Elevation 550 m.
 Low sclerophyllous forest adjacent to rapids.
 Conglomerate.
 Collections: 2673 - 2698. Collected with D.R. Smart.
- Maipuri Falls, Karowrieng River, ±10 km from mouth. 16 December 1989.
 05°41'N 060°14'W, Elevation 570 to 600 m.
 Evergreen forest (wet, medium height), montane.
 Collections: 2699 - 2725. Collected with D.R. Smart.
- 0-2 km S of Maipuri Falls, Karowrieng River. 17 December 1989.
 05°41'N 060°14'W, Elevation 620 m.
 Open scrub savanna on rock outcrop.
 Collections: 2726 - 2751. Collected with D.R. Smart.
- Maipuri Falls, Karowrieng River; along portage trail. 18 December 1989.
 05°41'N 060°14'W, Elevation 570 to 600 m.
 Low, wet evergreen forest.
 Collections: 2752 - 2764. Collected with D.R. Smart.
- Between Partang and Karowrieng Rivers, near Imbaimadai. 19 December 1989.
 05°41'N 060°16'W, Elevation 570 to 580 m.
 Savanna.
 Collections: 2765 - 2772. Collected with D.R. Smart.
- Imbaimadai, creek ±0.5 km E of Imbaimadai. 19 December 1989.
 05°42'N 060°17'W, Elevation 550 m.
 Gallery forest along creek in savanna.
 Collections: 2773 - 2780. Collected with D.R. Smart.
- ±1 km SE of Imbaimadai. 19 December 1989.
 05°42'N 060°17'W, Elevation 550 m.
 Savanna.
 Collections: 2781 - 2789. Collected with D.R. Smart.
- Between Partang and Karowrieng Rivers; 3-4 km SW of Imbaimadai. 20 December 1989.
 05°41'N 060°16'W, Elevation 570 to 580 m.
 Savanna.
- Collections: 2790 - 2800. Collected with D.R. Smart.
- Partang River, ±2 km SW of Imbaimadai. 20 December 1989.
 05°45'N 060°16'W, Elevation 530 to 550 m.
 Gallery forest adjacent to rapids.
 Collections: 2801 - 2802. Collected with D.R. Smart.
- Maipuri Falls, Karowrieng River. 20 December 1989.
 05°41'N 060°14'W, Elevation 570 to 600 m.
 Wet, evergreen forest.
 Collections: 2803 - 2835. Collected with D.R. Smart.
- Top of escarpment above Timehri rock paintings, ±2 km SSW of Maipuri Falls. 23 December 1989.
 05°40'N 060°17'W, Elevation 870 to 920 m.
 Scrub savanna.
 Collections: 2836 - 2860. Collected with D.R. Smart.
- Escarpment slope above Timehri rock paintings, ±2 km SSW of Maipuri Falls. 23 December 1989.
 05°40'N 060°17'W, Elevation 700 to 850 m.
 Wet, evergreen forest, steep W-facing slope.
 Collections: 2861 - 2868. Collected with D.R. Smart.
- 2-3 km W of Maipuri Falls, Karowrieng R. 24 December 1989.
 05°41'N 060°15'W, Elevation 570 to 600 m.
 Savanna.
 Collections: 2869 - 2884. Collected with D.R. Smart.
- Approximately 2 km N of Maipuri Falls, Karowrieng River. 24 December 1989.
 05°41'N 060°15'W, Elevation 570 to 600 m.
 Low, wet forest.
 Collections: 2885 - 2888. Collected with D.R. Smart.
- Maipuri Falls, Karowrieng River. 25 December 1989.
 05°41'N 060°14'W, Elevation 570 to 600 m.
 Wet forest.
 Collections: 2889 - 2894. Collected with D.R. Smart.

- Karowrieng River, between Maipuri Falls and ± 4 km downstream. 27 December 1989.
 $05^{\circ}40'N$ $060^{\circ}15'W$, Elevation 550 to 570 m.
 Forest.
 Collections: 2895 - 2910. Collected with D.R. Smart.
- Between Karowrieng and Partang Rivers, between Maipuri Falls and ± 4 km downstream. 28 December 1989.
 $05^{\circ}40'N$ $060^{\circ}15'W$, Elevation 550 to 570 m.
 Savanna.
 Collections: 2911 - 2923. Collected with D.R. Smart.
- Mazaruni River, between Imbaimadai and Iruwa River. 29 December 1989.
 $05^{\circ}42'N$ $060^{\circ}17'W$, Elevation 550 to 560 m.
 Gally forest.
 Collections: 2924 - 2952. Collected with D.R. Smart.
- Mazaruni River, mining camp near Iruwa River mouth. 29 December 1989.
 $05^{\circ}38'N$ $060^{\circ}16'W$, Elevation 560 m.
 Forest near camp clearing.
 Collections: 2953 - 2955. Collected with D.R. Smart.
- Trip Number 17 : Ituni Savannas**
 Collections: 2956-3091. 16 January 1990 to 19 January 1990
- About 27 km from Ituni along Ituni - Kwakwani road. 16 January 1990.
 $05^{\circ}22'N$ $058^{\circ}07'W$, Elevation 30 to 60 m.
 Savanna.
 Collections: 2956 - 2971. Collected with V. Funk; T. McDowell; S. Tiwari.
- About 27 km from Ituni along Ituni - Kwakwani road. 17 January 1990.
 $05^{\circ}22'N$ $058^{\circ}07'W$, Elevation 30 to 60 m.
 Savanna on light brown sand.
 Collections: 2972 - 3018. Collected with V. Funk; T. McDowell; S. Tiwari.
- About 24 km from Ituni along Ituni - Kwakwani road, $\pm 5-8$ km along track to farm. 19 January 1990.
 $05^{\circ}22'N$ $058^{\circ}07'W$, Elevation 30 to 60 m.
 Savanna.
- Collections: 3019 - 3077. Collected with V. Funk; T. McDowell; S. Tiwari.
- 16-22 km from Ituni along Ituni - Kwakwani Road. 19 January 1990.
 $05^{\circ}25'N$ $058^{\circ}10'W$, Elevation 70 m.
 Open scrub on white sand.
 Collections: 3078 - 3090. Collected with V. Funk; T. McDowell; S. Tiwari.
- South of Linden along Linden - Ituni Road. 19 January 1990.
 $05^{\circ}45'N$ $058^{\circ}15'W$, Elevation 50 to 70 m.
 Scrub forest at road edge.
 Collections: 3091 - 3091. Collected with V. Funk; T. McDowell; S. Tiwari.
- Trip Number 18 : Kuru-Kuru Creek - Lamaha Canal**
 Collections: 4246-4268. 10 November 1991 to 11 November 1991
- Soesdyke-Linden Hwy; ± 3 km S Kuru-Kuru Cr; ± 22 km S Georgetown - Timehri Hwy. 10 November 1991.
 $06^{\circ}20'N$ $058^{\circ}15'W$, Elevation 10 to 20 m.
 Dry evergreen forest and scrub on white sand.
 Collections: 4246 - 4246.
- Soesdyke-Linden Hwy; ± 2.5 km S Kuru-Kuru Cr; ± 21.5 km S Georgetown- Timehri Hwy. 10 November 1991.
 $06^{\circ}20'N$ $058^{\circ}15'W$, Elevation 10 to 20 m.
 Dry evergreen forest and scrub on white sand.
 Collections: 4247 - 4248.
- Soesdyke-Linden Hwy; 0-3 km N Kuru-Kuru Cr; 16-19 km S Georgetown- Timehri Hwy. 10 November 1991.
 $06^{\circ}22'N$ $058^{\circ}15'W$, Elevation 10 to 20 m.
 Dry evergreen forest and scrub on white sand.
 Collections: 4249 - 4250.
- Near toll gate on Soesdyke-Linden Hwy; 12 km S Georgetown - Linden Hwy. 10 November 1991.
 $06^{\circ}24'N$ $058^{\circ}15'W$, Elevation 5 to 15 m.
 Dry evergreen forest and scrub on white sand.
 Collections: 4251 - 4252.
- Lamaha Canal, between Cane Grove and 7 km S of Mahaica. 11 November 1991.

06°37'N 057°56'W, Elevation 0 to 5 m.
Near canal and disturbed swamp forest.
Collections: 4253 - 4268 ; 4311 - 4313.

Trip Number 19 : Kaieteur

Collections: 4269-4310. 16 November 1991
to 19 November 1991

Kaieteur National Park, Potaro River above falls,
between falls and first rapids. 16 November
1991.
05°10'N 059°29'W, Elevation 425 m.
Riparian forest.
Collections: 4269 - 4290.

Kaieteur National Park; Potaro River, below
falls, between falls and Tuketit. 17 November
1991.
05°10'N 059°29'W, Elevation 90 m.
Collections: 4291 - 4291.

Kaieteur National Park; along trail between
airstrip and Tuketit. 18 November 1991.
05°10'N 059°29'W, Elevation 300 m.
Wet forest.
Collections: 4292 - 4292.

Kaieteur National Park; Potaro River just above
Kaieteur Falls. 18 November 1991.
05°10'N 059°29'W, Elevation 425 m.
Collections: 4293 - 4296.

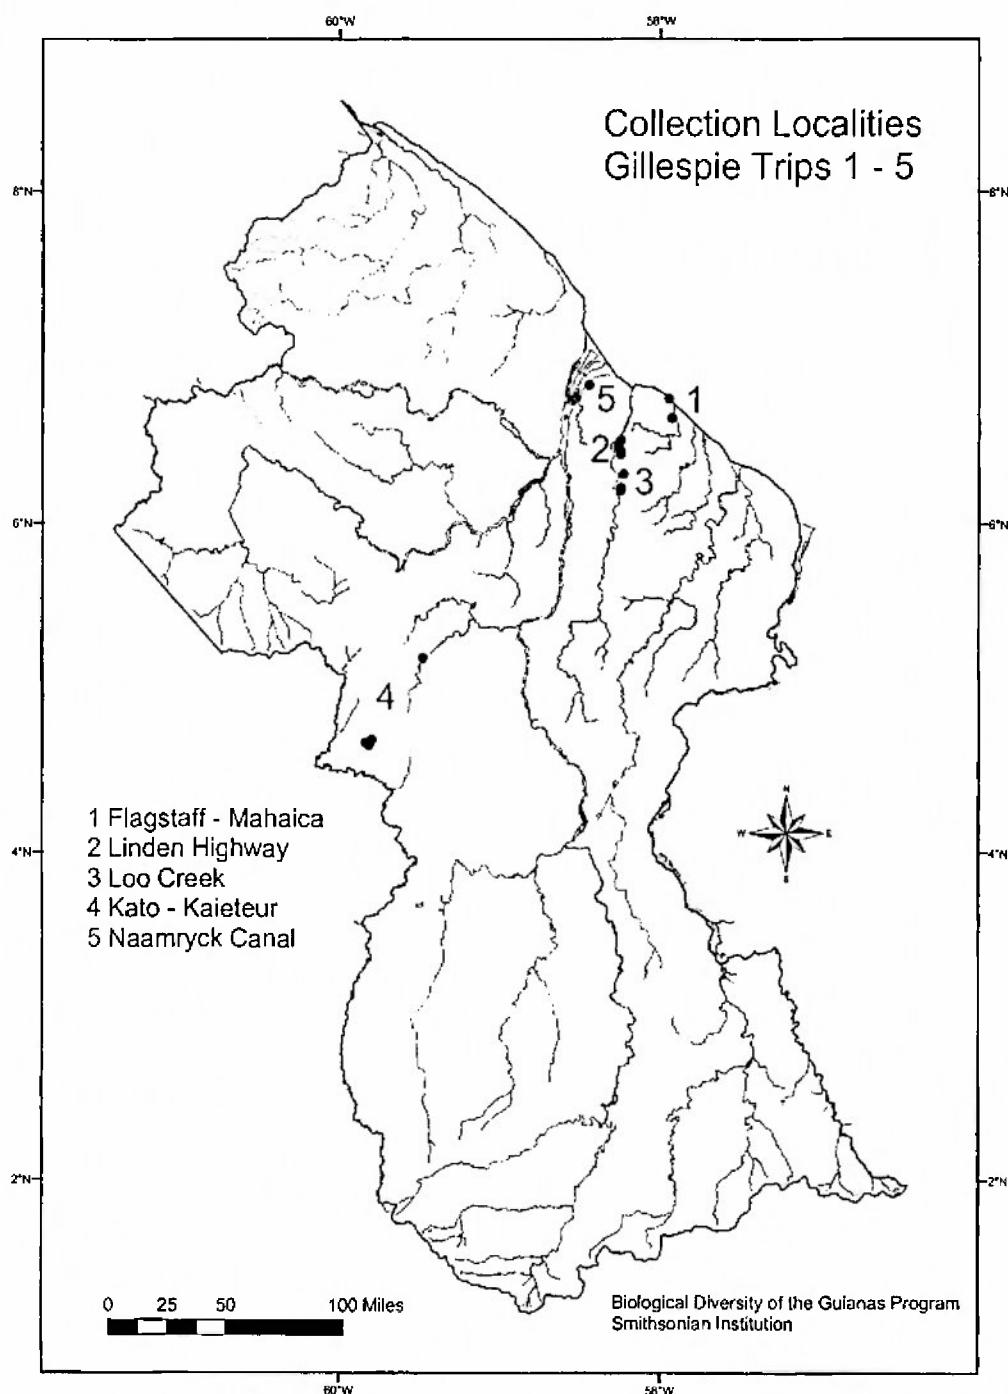

Kaieteur National Park; near airstrip. 18
November 1991.
05°10'N 059°29'W, Elevation 460 m.
Scrub savanna.
Collections: 4297 - 4297.

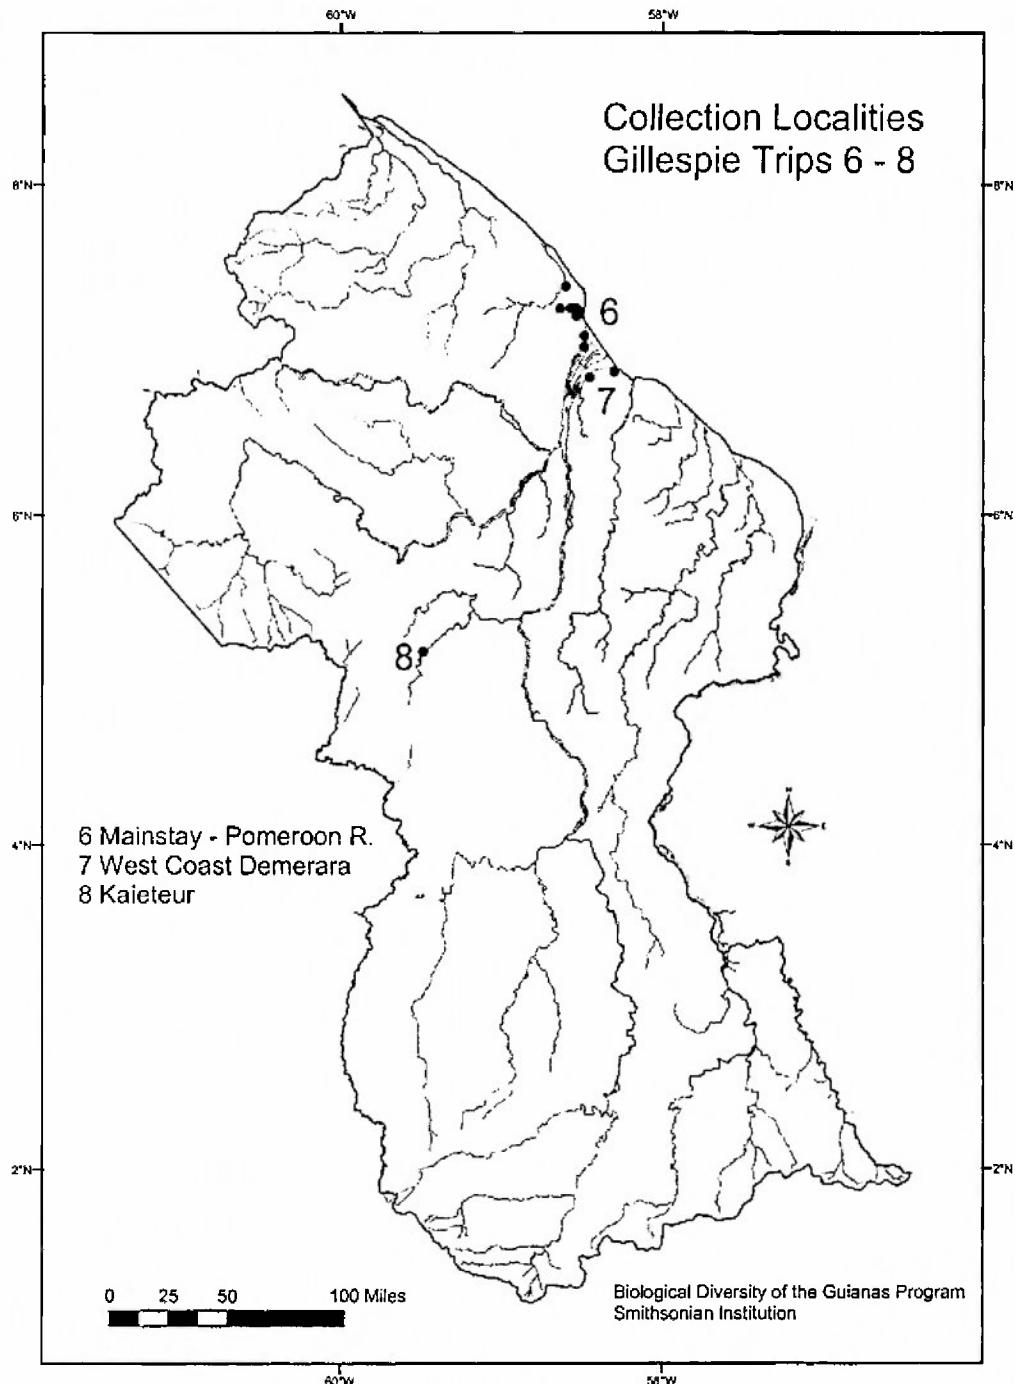

Kaieteur National Park; headwaters of Korume
Creek, 0.5 km N of airstrip. 18 November 1991.
05°10'N 059°29'W, Elevation 440 m.
Collections: 4298 - 4299.

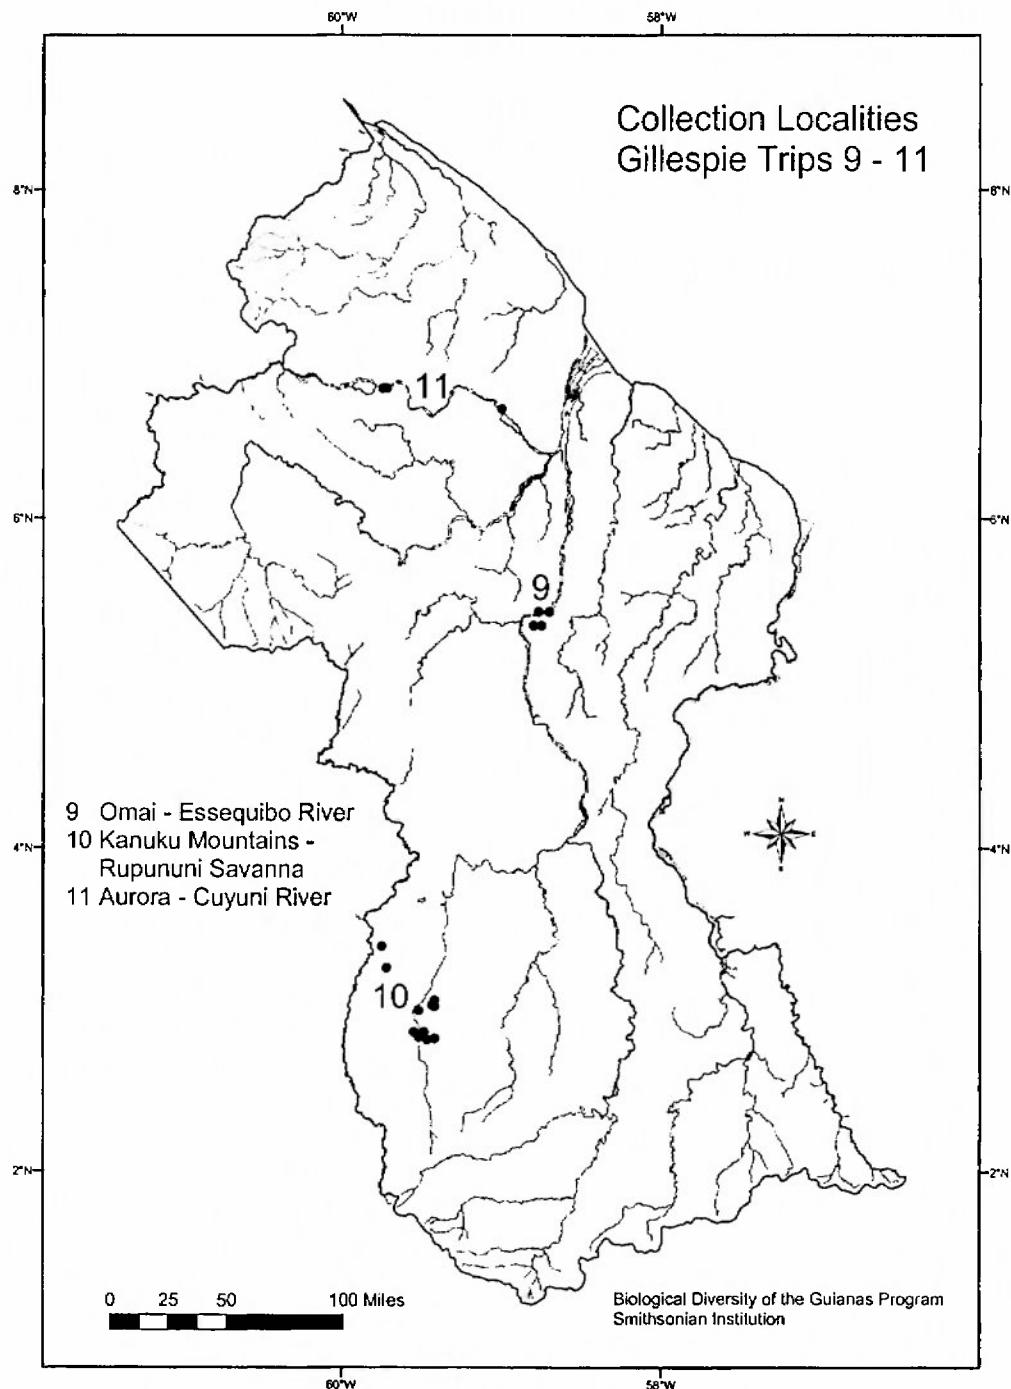

Kaieteur National Park; ±0.5 km WSW of
airstrip. 18 November 1991.
05°10'N 059°29'W, Elevation 450 m.
Scrub savanna on sandstone.
Collections: 4300 - 4305.

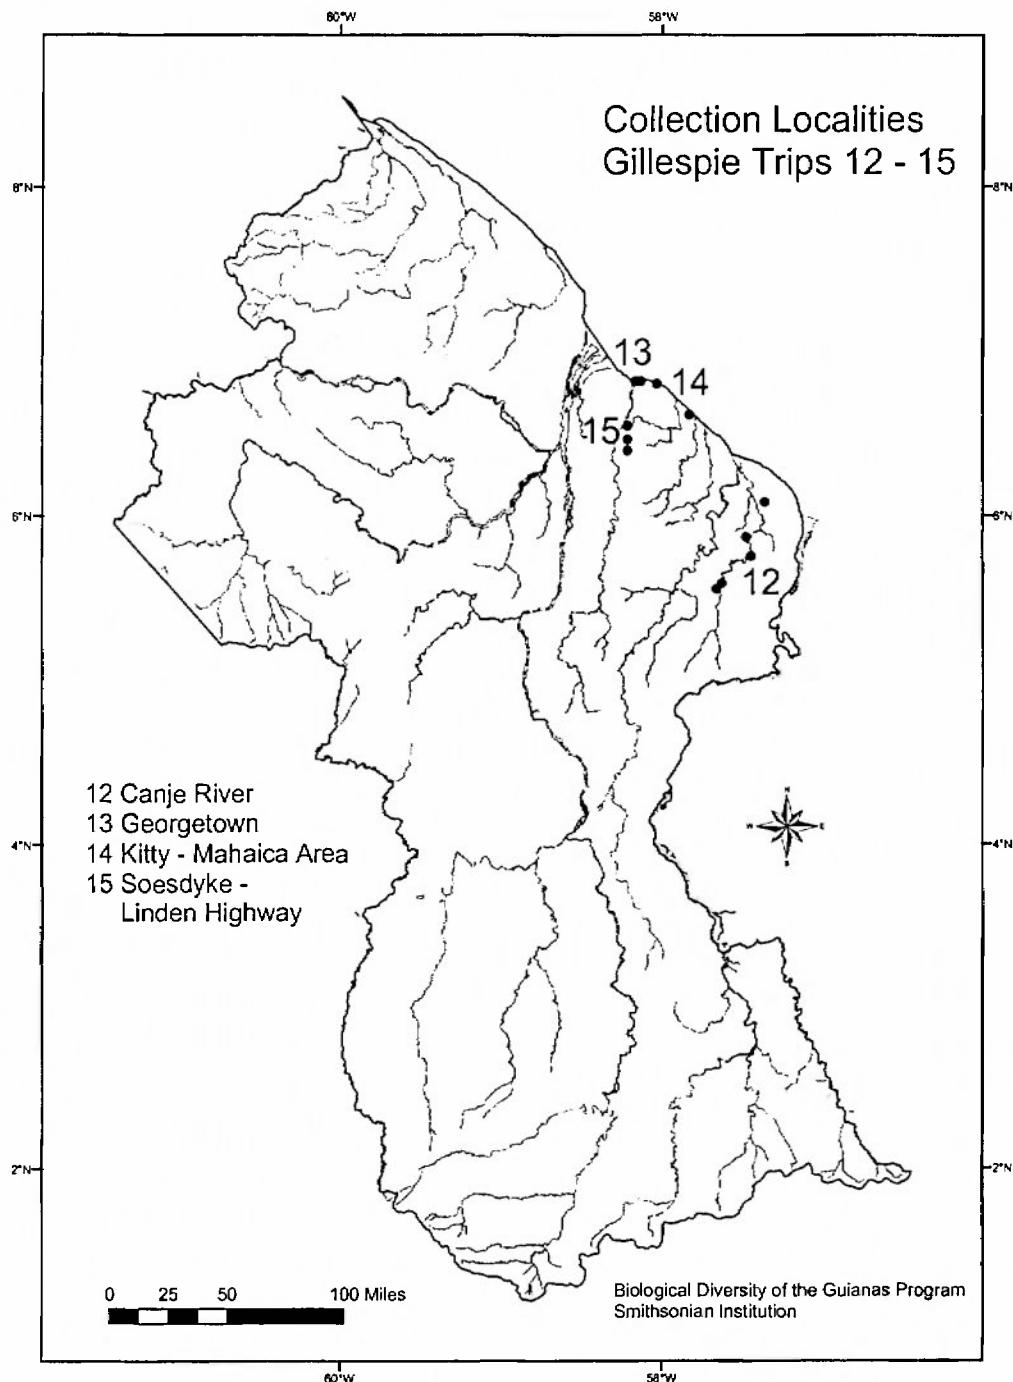

Kaieteur National Park; ±0.5 km WSW of
airstrip. 19 November 1991.
05°10'N 059°29'W, Elevation 450 m.
Scrub savanna on sandstone.
Collections: 4306 - 4310.

IV: COLLECTIONS BY DETERMINED TAXA

ALGAE

Indet.: 4291

LIVERWORTS

Indet.: 985, 986a, 1977b

Lejeuneaceae

Indet.: 1697

BRYOPHYTES

Indet.: 1466, 2130, 2715, 2824

Bartramiaeeae

Philonotis uncinata var. *glaucescens*: 1907b,
1925

Bryaceae

Bryum argenteum: 1977a

Dieranaceae

Campylopus cubensis: 984, 985a

Fissidentaceae

Fissidens sp.: 1699

Fissidens radicans: 1907c

Fissidens reticulosis: 1699b

Fissidens zollingeri: 1699a

Helicophyllaceae

Helicophyllum torquatum: 1797

Hookeriaceae

Hookeriopsis sp.: 2382

Leucobryaceae

Leucobryum crispum: 987

Octoblepharum albidum: 1696

Orthotrichaceae

Groutiella tomentosa: 1906

Pottiaeae

Trichostomum tenuirostre: 1907a

Pterobryaceae

Renaudia paradoxica: 985b

Sematophyllaceae

Sematophyllum subsimplex: 986b, 988, 1698,
1796, 1908, 2039

Taxithelium planum: 2038

Sphagnaceae

Sphagnum sp.: 2823

LYCOPHYTES

Lycopodiaceae

Lycopodiella alopecuroides var. *integerrima*:
2881

Lycopodiella caroliniana: 2796

Lycopodiella cernua: 1241, 2592

Lycopodiella cernua var. *cernua*: 859

Selaginellaceae

Selaginella epirrhizos: 2134

Selaginella mazaruniensis: 2896

Selaginella poreloides: 983

Selaginella seemannii: 2910

PTERIDOPHYTES

Indet.: 1817, 1857

Adiantaceae

Adiantopsis radiata: 1885

Adiantum cajennense: 1518

Adiantum dolosum (= *Adiantum asperum*):
1807b, 1883

Adiantum fuliginosum: 2116

Adiantum latifolium: 2031, 2059, 2061

Adiantum latifolium serratodentatum: 1884

Adiantum olivaceum: 1516

Adiantum phyllitidis: 1517, 2289

Adiantum pulverulentum: 1899

Adiantum serratodentatum: 1865, 2537, 2982

Doryopteris collina: 1974

Hemionitis palmata: 1886

Pityrogramma calomelanos: 2093

Aspleniacae

Asplenium cuneatum: 2743

Asplenium serratum: 2216

Blechnaceae

Blechnum serrulatum: 1146

Cyatheaceae

Cyathea surinamensis: 1520, 1522, 1534, 2064, 2105, 2306

Dennstaedtiaceae

Lindsaea lancea var. *elatior*: 841

Lindsaea lancea var. *lancea*: 2063

Lindsaea portoricensis: 979

Lindsaea schomburgkii f. *coriifolia*: 2705

Lindsaea tetraptera: 2706, 2737

Saccoloma elegans: 2058

Dryopteridaceae

Cyclodium inerme: 1515, 1533, 2288

Cyclodium meniscioides var. *meniscioides*: 1523, 2292

Olfersia cervina: 2293

Polybotrya caudata: 2065

Gleicheniaceae

Gleichenia sp.: 858

Grammitidaceae

Cochlidium furcatum: 2814

Cochlidium seminudum: 2764

Grammitis melanosticta: 2752

Grammitis suspensa: 946

Hymenophyllaceae

Trichomanes bicornis: 2904

Trichomanes pinnatum: 1531, 1926, 2381

Trichomanes windischianum (= *Trichomanes sprucei*): 2903

Lomariopsidaceae

Bolbitis semipinnatifida: 1512, 2395

Elaphoglossum sp.: 2742

Elaphoglossum glabellum: 970, 2819

Elaphoglossum macrophyllum: 2735, 2867

Elaphoglossum plumosum: 2750

Elaphoglossum rigidum (= *Elaphoglossum flaccidum*): 2286

Lomariopsis japurensis: 2285

Lygodiaceae

Lygodium micans (= *Lygodium volubile*): 1007, 1879, 2260

Lygodium venustum: 1951

Marattiaceae

Danaea leprieurii: 2089

Danaea simplicifolia (= *Danaea elliptica* subsp. *simplificifolia*): 1519

Metaxyaceae

Metaxya rostrata: 844, 1513, 1521, 2291, 2747

Oleandraceae

Nephrolepis biserrata: 1154, 2890

Nephrolepis rivularis: 2380

Oleandra articulata: 965, 2866a

Polypodiaceae

Campyloneurum phyllitidis: 1479

Campyloneurum repens: 2131

Microgramma lycopodioides: 1248, 1463

Microgramma lycopodioides var. *prominula*: 2211

Microgramma persicariifolia: 1080

Microgramma reptans: 1179, 1462, 2060

Pecluma plumula: 1858

Pleopeltis percussa: 2448

Polypodium caceresii: 2748

Polypodium polypodioides var. *burchellii*: 1889

Schizaceae

Anemia ferruginea var. *ferruginea*: 1773b

Anemia hirta: 1773a, 1887

Schizaea elegans: 2736

Schizaea incurvata: 1107, 3050

Tectariaceae

Triphophyllum angustifolium: 1532

Triphophyllum funestum: 1514, 1530, 2062

Thelypteridaceae

Thelypteris arborescens: 881

Thelypteris vel aff. galanderi: 1923

Thelypteris guyanensis (= *Thelypteris macrophylla*): 2184

Thelypteris hostmannii (= *Thelypteris arborescens*): 1916

Thelypteris opulenta: 1535, 2100

Thelypteris serrata: 2215

GYMNOSPERMS**Gnetaceae**

Gnetum nodiflorum: 2568, 4246, 4247

Gnetum camporum: 2925

ANTHOPHYTA

Bauhinia sp.: 1679, 1764, 1984

Bauhinia kunthiana: 2235

Brownea sp.: 2354

Brownea coccinea: 2233

Caesalpinia bonduc: 2616

Campsandra comosa (= *Campsandra chigo-montero*): 2426

Campsandra comosa var. *comosa*: 1445

Cassia sp.: 3006

Cassia moschata: 2016

Cassia multijuga (= *Senna multijuga*): 2369

Chamaecrista desvauxii var. *brevipes*: 1964

Chamaecrista desvauxii var. *mollissima*: 743, 2655, 2790

Chamaecrista diphylla: 2498, 2534, 3032

Chamaecrista flexuosa: 1934, 2469, 2572, 3027

Chamaecrista hispidula: 1937, 2445, 2990

Chamaecrista nictitans var. *disadena*: 1981

Chamaecrista serpens: 2570

Chamaecrista viscosa var. *major*: 2468

Crudia tomentosa: 2333

Cynometra bauhiniifolia: 1556

Cynometra hostmanniana: 2421

Dicymbe fraterna: 2683

Dicymbe jenmanii: 918, 1229, 1336, 2766, 2860

Dimorphandra cuprea: 1311, 2721, 4306

Elizabetha coccinea var. *oxyphylla*: 1579

Eperua sp.: 4250

Eperua falcata: 1169, 1405, 2767, 3074

Eperua jenmanii: 1559

Eperua schomburgkiana: 2588

Jacqueshuberia brevipes: 2821, 2948

Macrolobium sp.: 2801

Macrolobium acaciifolium: 1452, 1988

Macrolobium angustifolium: 1365, 1379, 1547, 2905

Macrolobium bifolium: 1208, 2422

Senna bicapsularis: 2622

Senna latifolia: 2506a, 3044

Senna multijuga: 2219, 2360

Senna obtusifolia: 733, 2506

Senna occidentalis: 1348

Senna quinquangulata: 895, 1346, 2148

Swartzia apiculata: 1838

Swartzia guianensis: 2329

Swartzia laevicarpa: 1335

Tachigali sp.: 1444, 2319

Fabaceae-Mimos.

Abarema jupunba var. *trapezifolia*: 820

Acacia arabica: 2626

Acacia farnesiana var. *farnesiana*: 2625

Acacia tenuifolia var. *tenuifolia*: 1669

Albizia subdimidiata: 2343, 2444

Anadenanthera peregrina: 1692

Calliandra surinamensis: 2832

Entada polystachya: 2441, 2582

Hydrochorea corymbosa: 1374

Hydrochorea gonggrijpii: 2833

Inga ingoides: 1037, 1224, 2416

Inga meissneriana (= *Inga vera* subsp. *affinis*): 1763, 2212, 2232, 2245

Inga nobilis: 1427, 2081, 2190, 2320

Inga sertulifera: 1361, 1449

Inga thibaudiana: 2774

Inga umbellifera: 1783

Macrosamanea pubiramea: 797, 1121

Mimosa microcephala var. *lumaria*: 1980

Mimosa myriadenia: 2050

Mimosa pellita (= *Mimosa pigra*): 1041, 2242

Mimosa pudica var. *tetrandra*: 3029

Mimosa pudica var. *unijuga*: 755, 1622

Mimosa somnians: 862

Pentaclethra macroloba: 1004, 1189, 1582, 2189, 2361, 2412

Piptadenia leucoxylon: 1688

Pithecellobium dulce: 2621

Pithecellobium gonggrijpii (= *Hydrochorea gonggrijpii*): 1371

Zygia cataractae: 1403, 2204

Zygia latifolia var. *latifolia*: 1182

Fabaceae-Papil.

Indet.: 863, 1912, 1982, 3023, 3025, 4266, 4305

Abrus precatorius: 1216

APPENDIX: BOTANICAL COLLECTING IN GUYANA

L. J. Gillespie

Biological Diversity of the Guianas Program

July 1990

Carefully pressing some diminutive ferns between pages of the Guyana Chronicle, I looked up to admire my surroundings. The Chiung River was cascading over dark pink sandstone just a few meters away. Hummingbirds darted among colourful arching inflorescences of the liana *Norantea* (plate 1), pausing to sip nectar from the bright red sac-like bracts. The gallery forest, a narrow band of trees along the river, had already proved to be rich with unusual plants. Beyond the forest were small creeks lined with fan palms and steep open slopes leading to our base camp on a vast upland plateau. A flash of white and yellow in the foliage of a nearby shrub caught my eye. Approaching, I discovered several large passion flowers hidden among its leaves. I had not been familiar with any shrubs in this genus of vines known for their showy flowers and edible fruit. This turned out to be a wonderful discovery. The shrub was later identified as *Passiflora quelchii*, the first record for the Guianas and the third collection of this species in the world! (Hahn & Gillespie 5767, plate 2)

Guyana is perched just above the equator between the great deltas of the Amazon and Orinoco rivers on the northern shoulder of South America. With a total population of 750,000, about 90 percent of the inhabitants live on the rich agricultural land along the coast. The natural vegetation of the "interior" remains largely undisturbed. About the size of the United Kingdom, Guyana has seven to eight times the number of native vascular plant species. During my year spent there as a field botanist, I was overwhelmed by the great diversity of its flora and fauna. Working for the Smithsonian Institution's Biological Diversity of the Guianas Program in Washington DC, in close collaboration with the Biology Department of the University of Guyana, our purpose was to sample, catalogue and describe this amazing diversity of plants and animals. We organized expeditions of 2 to 6 weeks duration, to explore

and collect in the most remote areas of Guyana where transportation is limited primarily to footpath and river.

Guyana's long geological history and diverse geomorphology have contributed significantly to the evolution of its unusual and very diverse flora and fauna. Approaching Guyana by air over the Atlantic Ocean one can appreciate the vastness of the interior behind the narrow coastal strip of towns and farms. This low-lying coast, built up primarily from rich sediment washed ashore from the Amazon's outflow, was home to mangrove and freshwater swamp forests, both now highly disturbed by man. Flying inland by helicopter, we soon left the drained fields of rice and sugarcane. Looking down, we saw a mosaic of savannas and open, seasonal forest growing on the white sand of old beaches. Further on we reached the rainforest, a broad band sweeping south west across the country on alluvial and red, lateritic soils. This is the home of Greenheart, one of the world's most valuable timber trees. Although well known in Guyana, where it has been commercially important for many years, the tree was only recently assigned to a new genus, *Chlorocardium*, of the Lauraceae or Bay family. We flew over many miles of first flat and then gently undulating forest canopy, a dense treetop patchwork of many rich shades of green with an occasional patch of bright yellow. Suddenly the bare rock of a vast escarpment confronted us. Winding up the narrow Potaro River gorge, we rose over 741 foot high Kaieteur Falls, the largest in Guyana and site of Guyana's only National Park. The escarpment marks the eastern edge of the Guiana Highlands, composed of layers of sandstone, kilometers thick and too old even to contain fossils. Further inland the sandstone has been heavily eroded into flat topped, steep sided mountains called tepuis (or tepuis as they are more commonly known outside Guyana). Beneath this ancient sedimentary rock lies a basement of Precambrian igneous rock, one of the oldest rock masses in

South America. Mostly covered by the sandstone layers, a large outcrop of this rock mass forms the Kanuku Mountains in the middle of the Rupununi Savannas.

One of our expeditions was to the southwestern Kanuku Mountains. Getting to our base camp in the middle of the wet season had not been an easy task. We flew in a small twin engine plane, bursting with field botanists and a month's worth of food and supplies. We left Georgetown, the coastal capital, and headed south, landing in Lethem, the major town of the Rupununi Savannas. Taking advantage of a short dry spell, we were able to travel by jeep across the mud and standing water of partially inundated savannas to a cattle ranch in the southern Rupununi Savannas. From there a boat carried us down the Rupununi River, a small trickle in a dry bed most of the year, then at the point of overflowing its steep banks. Finally with our goods piled high on an ox-cart (figure 9), we walked the remaining distance to Sand Creek, an Amerindian village nestled along the southern edge of the Kanuku Mountains. Warmly welcomed, we were soon participating in the annual festival of St. John the Baptist, watching everyone from children to grandmothers and finally ourselves walk on the glowing embers of a large bonfire. To our amazement, walking on fire could be done with no pain, using the right combination of firewood and timing. The next day we traveled by foot with our Amerindian guides up into the Kanuku Mountains.

Figure 9. Collecting gear on an oxcart en route to Sand Creek, on the Rupununi Savanna

Our camp in the Kanuku Mountains was a simple but comfortable place beside a sparkling

creek. We constructed the two shelters that would be our home for the next week, each a framework of slender tree trunks over which we spread a large waterproof tarp. From our hammocks, through mosquito nettings, we looked out across rolling, upland savanna and beyond to forested peaks (figure 10). Behind us were the creek and its narrow band of relatively lush gallery forest. Listening to the frogs, we tried to get to sleep early; the next day would be a long day of exploring and plant collecting.

At sunrise we took advantage of the coolness of the early morning, and set off with our plant collecting gear, consisting of a plant press, newspaper, pruning shears, a trowel, plenty of large plastic bags and a field notebook. Initially, we explored our immediate surroundings, collecting savanna grasses and flowering herbs. Whole plants, root and all, were placed between folded pages of newspaper and carefully arranged with flowers open. These sheets were then placed in a plant press consisting of two wooden boards strapped tightly in order that the plants dry flat and as thin as its newspaper. In this way large numbers of plants can be transported and stored for study in the world's many herbaria. Shrubs and trees were sampled by clipping off foot-long pieces of branch including flowers, leaves and, if present, fruits. With our treasures of a laden plant press and giant bags stuffed full of spiny palms, *Heliconia* (a relative of bananas), wild guava fruit, flowering cashew and numerous yet-to-be-identified plants, we headed back to camp under the blazing mid-afternoon sun. The air was thick with kabaras. These tiny, pervasive flies that mark the wet season swarm around you whenever you sit still for more than a few minutes. We were fortunate that they disappeared at dusk as we worked well into the night by the flickering light of our kerosene lanterns. To form a permanent scientific record, every plant collected must be given an identification number which is recorded in the collector's notebook along with its locality and a description of its size, flower colour and other distinguishing features that may not be well preserved. Sometimes plants are dried in the field in a large portable drier consisting of a metal frame with a skirt of canvas; kerosene stoves provide the heat that rises up through corrugated metal sheets stacked alternately with

the sheets of plants. However on this very rainy trip we simply bundled the sheets together and placed them in large plastic bags along with a solution of ethanol to preserve the plants until we arrived back in Georgetown.

Figure 10. Forested slopes of the Kanuku Mountains.

On several other expeditions we visited the Pakaraima Mountains in western Guyana. These highlands include perhaps the most spectacular scenery as well as the greatest concentration of endemic flora. Roraima, Wokomung and Ayanganna, three flat-topped steep-sided tepuis, are the highest peaks in Guyana, each over 6,000 feet high. Although forests cover much of the Pakaraimas, savannas are a very conspicuous part of the landscape. In the northern, wetter half of the mountains with sandstone outcrops and thin soil, there is an unusual kind of savanna very characteristic of the Guianan region. The dominant plants belong to the pincapple, yellow-eyed grass and Rapatea families (Bromeliaceae, Xyridaceae and Rapateaceae, respectively). These give the savannas a very bizarre and other-

worldly appearance, very different from the grass dominated Rupununi Savannas. These massifs formed the setting for Conan Doyle's "The Lost World". Although his strange creatures probably do not exist, numerous species of plants and animals exist here that are found nowhere else. Giant Bladderworts 2 meters tall, of the genus *Utricularia*, grow in the cupped bases of bromeliad leaves (plate 4). Unusual terrestrial orchids and insectivorous pitcher plants and sundews grow in cracks in the ancient, blackened sandstone.

A walk through a Guianan rainforest is always a thrilling experience for a temperate zone botanist. Rarely does a shaft of light penetrate to the dark forest floor. It is not the impenetrable and colourful "jungle" that one expects; instead there is a spacious feeling with the high ceiling and dark green understory. Relatives of common houseplants, including miniature palms, Prayer Plants, *Dieffenbachia* and *Spathiphyllum*, grow on the forest floor as in a garden. Scattered on the ground we see delicate pink flowers, heavy globose monkey pods over a foot in diameter and shiny red seeds, recently fallen from the canopy. Over 30 meters above our heads, the massive straight tree trunks disappear into a canopy of tangled branches and leaves. This is perhaps the most challenging place to collect plants. With clipper poles, pruners mounted on adjustable poles and manipulated by means of a long rope, we can reach 8-10 meters to some lower branches, vines and epiphytes. But to reach the canopy the trees must be climbed using either ropes slung from sturdy branches and the climbing equipment of cavers and rock climbers, or with "tree climbers" which are large, curved, spiked metal bars that are strapped to the feet.

After a long field trip we were glad to return to Georgetown for a few days of relaxation. Unfortunately there was still plenty to do so we soon got back to work. Plants preserved in the field must be dried, then mounted on stiff sheets of paper and labeled with their number, locality, date and vegetation type; this end product is an herbarium specimen which can be easily examined and stored. Because tropical floras are so diverse and so little is known about them, one is frequently unsure when collecting in the field if a plant is new to science. For example, there

are about forty species of *Passiflora* known from Guyana out of a total of about 600 species worldwide. The herbarium specimens are sent around the world to specialists who work on a particular plant family or group. Armed with the botanical literature, some dating back to the time of Linnaeus and even before, and with the available specimens of that group, the specialist can then decide what is new.

Looking back on my year in Guyana, I feel privileged to have had the opportunity to explore the interior and to become familiar with its tropical flora. A country with such incredible biological diversity that is still relatively intact is rare in South America, as it is in the rest of the

world. But even during that short time, I became aware of major changes that may threaten this unique environment. New roads are being cut through the rainforest, opening the area to lumbering operations and the potential for large scale deforestation. An increasing number of gold and diamond miners are seeking their fortune in the interior, resulting in mercury pollution of the rivers and destruction of river bank habitat. An active trade in wildlife, particularly birds and monkeys has the potential for significantly reducing populations. Now is the time to develop a conservation program and set aside large areas of the interior as reserves or parks, so that future generations may enjoy what I have experienced.
