

**A CATALOGUE OF THE BIRDS OF NORTH AMERICA.****By ROBERT RIDGWAY.****INTRODUCTION.**

During the interval of twenty-one years which has elapsed since the publication of the last Smithsonian catalogue,\* a great advance has naturally been made in our knowledge of North American ornithology; and so numerous and important are the changes which have resulted, through additions of new species, rectifications of synonymy, etc., that a new list seems desirable to take the place of the old one.

The total apparent number of species given in the old catalogue has been increased only from 738 to 764, a slight numerical discrepancy which it is necessary to explain. From the catalogue of 1859 there have been eliminated no less than 62 names, which are either not entitled to a place in the North American fauna or which have been degraded to varietal or sub-specific rank, the number of the species in the latter case being here simply duplicated as many times as there are varieties of a species. To offset this large reduction, 59 valid new species have been described since 1859, and 77 added, or restored, to the fauna, the accessions thus numbering 127 species, or 65 more than the eliminations. The forms considered to be of merely subspecific rank number 160, which, added to the 764 valid species recognized, gives a total of 924 definable forms composing the North American avian fauna, as now understood.†

It is found impracticable to here distinguish, in all cases, between

\* Two catalogues of North American birds have been issued by the Smithsonian Institution, as follows:

(1) Catalogue of North American Birds, chiefly in the Museum of the Smithsonian Institution. By Spencer F. Baird, Assistant Secretary of the Smithsonian Institution. Washington: Smithsonian Institution. October, 1859. 4to, paper. 1 p. l, pp. xvii-lvi. [Reissue, with new title-page, of pp. xvii-lvi of Vol. IX, Pacific R. R. Reports ("Birds of North America"). Includes, besides the list of 738 species, with habitats, tables of the higher groups, and lists of extralimital species (23 in number) treated in the general report, and of others (31) claimed, on apparently insufficient grounds, as North American; also a summary of the number of species given in the works of Wilson, Bonaparte, and Audubon.]

(2) Catalogue of North American Birds, chiefly in the Museum of the Smithsonian Institution. By Spencer F. Baird. First octavo edition. Washington: Smithsonian Institution. [Smithsonian Miscellaneous Collections, No. 108.] 1859. 8vo. 2 p. ll, pp. 19+2. [Essentially the same as the quarto list, but without habitats, and the matter relating to classification, etc. The two additional pages are an alphabetical index of the North American genera. As in the quarto list, there are, ostensibly, 738 species, but 29 numbers are duplicated, making a total of 760 names in the list.]

† A full analysis of the changes made in this catalogue is given on pages 213-234.

species which are truly or peculiarly North American and those which are more properly visitants from other countries: but in the case of those whose occurrence appears to be accidental or occasional, the number preceding the name is inclosed in brackets. Of the latter class, species which there is good reason to believe did not reach our limits through natural means (*i. e.*, those escaped from confinement) have been, in every case, carefully excluded, as have likewise *all* introduced species.

It has been deemed best, in view of the recent discoveries along our southwestern border, to retain as North American all the species (less than a dozen in number) treated by Professor Baird in Volume IX, Pacific Railroad Reports ("Birds of North America"), and likewise given in the old catalogue, on account of their having been obtained just across the boundary, in Northern Mexico; their discovery within our limits being quite certainly only a question of time and investigation. For the same reason, the remaining few of Giraud's "Sixteen New Species of Texan Birds"\*\* are also included. Neither are we prepared to relinquish several Andubonian species which at the present time are known only from the descriptions and figures by their discoverer (*e. g.*, *Regulus curieri*, *Perissoglossa* [?] *carbonata*, *Dendræca montana*, and *Wilsonia minuta*, as well as other better-known species which are given by Audubon *on his own authority* (*e. g.*, *Chrysomitris* "magnellanicus" = *C. notata*, and *Eudocius ruber*).

Several species peculiar to the islands of Socorro and Guadalupe, off the coast of northwestern Mexico and Lower California, respectively, together with the few forms peculiar to the latter peninsula, are regarded as truly North American, their affinities, with perhaps only two exceptions (*i. e.*, *Conurus holochlorus* and *Polyborus latosus*), being strictly "Nearctic."

The greatest difficulty encountered in the compilation of this work has been in the way of distinguishing between valid "species" and those forms to be regarded as geographical races of merely subspecific rank. The greatest care has been taken in all doubtful cases of this kind, and previous conclusions (published in "History of North American Birds"† and elsewhere) carefully reconsidered, with the aid of all the material accessible, including many specimens not previously in hand. This reconsideration of the subject has, in not a few cases, resulted in a reversal of former opinion, specimens from important localities not before represented often deciding the point one way or the other. Every form whose characteristics bear unmistakably the impress of climatic or

Folio, not paged, 8 plates. [For species given in this work, which have not since been obtained within the limits of the United States, see p. 229.]

local influences, gradually less marked toward the habitat of another form, with which it thus intergrades; and all forms which certainly intergrade, no matter how widely distinct the opposite extremes may appear (*e. g.*, *Colaptes auratus* and *mexicanus*), together with intergrading forms whose peculiarities are not explained by any known "law" of variation, have been reduced to subspecific rank. On the other hand, where the difference between allied forms is slight, but at the same time absolutely constant, and not coincident with a difference of habitat (*e. g.*, certain of the small Thrushes and the various forms of *Junco*), specific rank is upheld. There are some forms which future investigation, based upon adequate material, may decide to be of different rank from that accorded them here. We cheerfully acknowledge our fallibility, but at the same time would say that we have endeavored to be as conscientious and consistent as possible, giving the rank of each form as it appears in the light of our present knowledge, independent of previous conclusions.

## APPENDIX.

---

The following tables are intended as a condensed analysis of the changes which have taken place in North American ornithology since 1859, with other items of interest in the same connection.

*a. Species eliminated from the catalogue of 1859.*

Catalogue No.

4. *CATHARTES BURROVIANUS*, Cassin. *Not North American?*
6. *FALCO NIGRICEPS*, Cassin. = No. 414.
16. *ACCIPITER MEXICANUS*, Swains. = No. 431.
19. *BUTEO BAIRDII*, Hoy. = No. 442, *young*.
21. *BUTEO INSIGNATUS*, Cassin. = No. 442, *melanistic*.
24. *BUTEO MONTANUS*, Nuttall. = No. 436b, *lighter phase*.
28. *BUTEO OXYPTERUS*, Cassin. = No. 442, *young*.
30. *ARCHIBUTEO LAGOPUS*, Gray. = No. 447, *light phase*.
40. *HALIAËTUS PELAGICUS*, Siebold. *Not North American*.
41. *HALIAËTUS WASHINGTONII*, Jard. = No. 451, *young female*.
56. *NYCTALE ALBIFRONS*, Cassin. = No. 401, *young*.
59. *ATHENE CUNICULARIA*, Bon. The true *cunicularia* is a South American form.\*
66. *CROTOPHAGA RUGIROSTRIS*, Sw. = No. 389.
73. *CAMPEPHILUS IMPERIALIS*, Gray. *Not North American*.
88. *SPIHYROPICUS WILLIAMSONII*, Baird. = No. 370, *adult male*.
100. *LAMPORNIS MANGO*, Swains. *Not North American*. [= *L. violicauda* (Bodd.) Ell.]
129. *TYRANNUS MELANCHIOLICUS*, Vieill. *Not North American*.
- 167a. Var. *MNIOTILTA LONGIROSTRIS*, Baird.†
171. *GEOTHLYPIS VELATUS*, Cab. *Not North American*.
215. *MYIODICTES BONAPARTEI*, Aud. = No. 127, *young*.
239. *COLLYRIO ELEGANS*, Baird. An Asiatic species (*Lanius lahtora*, Sykes.).
242. *VIREO VIRESSENS*, Vieill. = No. 135?
- 253a. Var. *MIMUS CAUDATUS*, Baird. Not separable from *polyglottus*.
- 259a. *HARPORHYNCHUS VETULA*, Baird = No. 15.
- 261a. *HARPORHYNCHUS LONGICAUDA*, Baird. Scarcely separable from *rufus*.
272. *TROGLODYTES AMERICANUS*, Aud. = No. 63.
- 289a. Var. *PARUS ALBESCENS*, Baird = No. 41a.
309. *CARPODACUS HAEMORRHIOUS*, Wagl. *Not North American?*
311. *CHRYSMOMITRIS STANLEYI*, Bonap. *Not North American*. [= *C. BARBATA* (Mol.).]
312. *CHRYSMOMITRIS YARRELLI*, Bonap. *Not North American*.
324. *LEUCOSTICTE ARCTOUS*, Bonap. No sufficient evidence of occurrence in North America.
329. *PLECTROPHANES MELANOMUS*, Baird = No. 189.
365. *MELOSPIZA GOULDII*, Baird = No. 231c.
405. *TRUPIALIS MILITARIS*, Bonap. *Not North American*.

\* There appears to be but a single race inhabiting North America.

† While there is undoubtedly a very appreciable difference between specimens of *M. varia* from the West Indies and those from the *interior* of Eastern North America in the length of the bill, it is the small-billed form which should receive a new name, since Linnaeus's name *varia* was based upon the bird of the South Atlantic States and West Indies. If to be regarded as separable, the name *borealis*, Nutt., may be applied to the western birds.

Catalogue No.

424. *CORVUS CACALOTL*, Wagl. = No. 280.  
 470. *LAGOPUS AMERICANUS*, Aud. = No. 475.  
 482. *DEMIEGRETNA PEALII*, Baird = No. 491, *white phase*.  
 486a. *HERODIAS EGRETTA V. CALIFORNICA* = No. 489.  
 488. *ARDEA WURDEMANNII*, Baird = No. 486, *colored phase*.  
 494. *BUTORIDES BRUNNESCENS*, Baird. *Not North American*.  
 514. *HAEMATOPUS ATER*, Viellot. *Not North American*.  
 566. *ANSER FRONTALIS*, Baird = No. 593a, *young*.  
 603. *PELIONETTA TROWBRIDGII*, Baird = No. 633.  
 605. *OIDEMIA BIMACULATA*, Baird = No. 632, *young*.  
 630. *DIOMEDEA EXULANS*, Linn. *Not North American*.  
 659. *LARUS CHALCOPTERUS*, Lawr. = No. 662.  
 665. *LARUS SUCKLEYI*, Lawr. = No. 670, *young*.  
 669. *CHIROICOCEPHALUS CUCULLATUS*, Br. = No. 674, *young, second year*.  
 671. *CHIROICOCEPHALUS MINUTUS*, Bruch. *Not North American*.  
 673. *RISSA SEPTENTRIONALIS*, Lawr. = No. 670, *adult*.  
 675. *RISSA NIVEA*, Brñch = No. 659.  
 677. *PAGOPHILA BRACHYTARSI*, Hölb. = No. 657.  
 686. *STERNA HAVELLI*, Aud. = No. 685, *winter plumage*.  
 693. *STERNA PIKEI*, Lawr. = No. 657, *young*.  
 703. *PODICEPS CRISTATUS*, Lath. *Not North American?*  
 703a. *PODICEPS COOPERI*, Lawr. = No. 731, *young*.  
 716. *SAGMATORHINA LABRADORIA*, Cas. = No. 745, *young*.  
 718. *CERORHINA SUCKLEYI*, Cassin = No. 746, *young*.  
 720. *PHALERIS TETRACULA*, Stephens = No. 748, *winter dress*.  
 722. *PHALERIS MICROCEROS*, Brandt = No. 750, *summer dress*.  
 730. *URIA RINGVIA*, Brünnich = No. 763, *individual phase*.  
 733. *BRACHYRHAMPHUS WRANGELII*, Br. = No. 755, *winter dress*.

Seven of the above are included in Coues's "Check List of North American Birds" (1873), viz., numbers 88, 100, 309, 488, 563a, 603, 693, and 703; the equivalent numbers of the "Check List" being, respectively, 305, 274, 141a, 450, 480a, 518a, 568, and 600—some of them bearing a different name from that given in the Smithsonian catalogue. Besides the foregoing, there are given in the "Check List" the following untenable names:

- 146a. *ÆGIOTHIUS LINARIA* (L.) Cab. var. *FUSCESCENS*, Cs. = No. 179, *midsummer dress*.  
 157bis. *CENTRONYX OCHROCEPHALUS*, Aiken = No. 191, *autumnal plumage*.  
 [187.] *PASSER DOMESTICUS*, Linn. *An introduced species*.  
 215a. *ICTERUS SPURIUS* (L.) Bp. var. *AFFINIS*, Lawr. Not separable from *I. spurius*.  
 [233.] *AGYRTRIA LINNEI* (Bp.) —. *Not North American*. [= *A. tobaci* (Gm.) Ell.]  
 374a. *CHAMEPELIA PASSERINA* (L.) Sw. var. *PALLESCENS*, (Bd.) Cs. *Untenable race*.  
 445ter [appendix]. *IBIS THALASSINUS*, Ridg. = No. 504, *young*.

*b. Species and races described or added to the North American fauna since 1859.\**

6. *Turdus iliacus*, Linn.—*Cf. REINHARDT*, Ibis, 1861, 6. (Greenland; two examples.)  
 7a. *MERULA MIGRATORIA PROPINQUA*, Ridgw.—*Turdus migratorious propinquas*, Bull. Nutt. Orn. Club, ii. Jan. 1877, 9. (Western U. S.)  
 8. *MERULA CONFINIS*, Baird.—*Turdus confinis*, Review Am. B. i. 1864, 29. (Todos Santos, Cape St. Lucas.)  
 14. *HARPORHYNCHUS CINEREUS*, Xantus.—Proc. Philad. Acad. 1859, 298. (Cape St. Lucas.)  
 14a. *HARPORHYNCHUS CINEREUS BENDIREI*, Coues.—Am. Nat. vii. June, 1873, 330, fig. 69. (Tucson, Arizona; C. Bendire.)

\* The new forms are in small capitals, the other additions in italics. In order to reduce the number of references to a minimum, only the original description, or the first North American record of a species is given. In some cases we have not been able to quote the first reference, but have done so whenever practicable.

Mr. H. K. Coale, of Chicago, Ill., has lately called my attention to certain differences between eastern (typical) and western specimens of this species, which, upon examination of a large series, I find to be quite constant and sufficiently appreciable to warrant the recognition of a western race. Western birds being exactly like those from Mexico in those points in which they differ from eastern specimens, Swainson's name *strigatus* (*Chondestes strigatus*, Philos. Jour. i. 1827, 435), based upon the Mexican bird, is available for the western and southern race.

- In the “Proceedings” of the Boston Society of Natural History, 1871, p. 42, Mr. Lawrence refers to a “*Buteo borealis*, var. *montanus*, Nutt.” as being very abundant on the island of Socorro, where it is the only species of hawk to be found, and where it is a “constant resident, rearing its young, and subsisting entirely on land crabs”; etc. In the same paper, p. 10. Mr. Lawrence applies the same name to a hawk occurring abundantly on the Tres Marias Islands, and there subsisting “entirely upon the Iguana lizard and rabbits.” In “History of North American Birds”, vol. iii, p. 285 (1874), I referred the Tres Marias bird to *Buteo borealis* var. *costaricensis*, and described our only specimen from that locality as the young of that form, although I had not, from want of specimens, been able to compare it with the corresponding age of the Central American bird. I now have strong doubts as to its being the same as *B. costaricensis*, while as to the hawk found on Socorro I regard it quite certain that it is, like the Caracara of Guadalupe (*Polyborus lutosus*), a species or race peculiar to that remote island, the birds of which are for the most part entirely local. I therefore propose to name, provisionally, the Socorro Hawk *B. borealis socorroensis*.

\* There is a male of this species in my collection said to have been obtained in Florida. It was found with a collection of Florida birds, forming part of a dealer’s stock, and was evidently the same “make” of skin as the rest of the lot.

533. *Actidromas acuminata* (Horsf.) Ridgw.—Obtained at St. Michael's, Alaska, by Mr. E. W. Nelson, U. S. Signal Service.

The single example forwarded by Mr. Nelson is without date or exact locality, and I have been unable to get from him the desired information, my letter to him on the subject having doubtless miscarried. The species is so important an addition to the fauna, however, that it cannot be overlooked in the present connection, reluctant as we are to publish a note of its occurrence without being able to furnish those data from the pen of Mr. Nelson himself, which would do him full justice, as the first discoverer of this Indian species on this continent.

- e. List of North American genera which have been described or added to the fauna since 1859, together with those whose names or orthography have been changed since that date.
1. HYLOCICHLA, Baird, Review Am. B. i. June 2, 1864, 12 (type, *Turdus mustelinus*, Gmel.).  
The *Turdus musicus* of Europe is a strict congener of *T. mustelinus*, and it is possible that some generic name may have been based upon it previous to the imposition of *Hylocichla*.
  6. *Turdus*, Linnaeus, S. N. ed. 10. i. 1758, 168 (type, *T. viscivorus*, Linn.).  
The *T. iliacus*, although not agreeing strictly with *T. viscivorus* in details of external structure, is still hardly different enough to entitle it to separation. It is much more like true *Turdus* than either of the other American genera (*Hylocichla* and *Merula*).

\* We cannot cite the page of the “Proceedings”, but the record appears on p. 44 of separate pamphlet entitled “A Comparative List of Birds found in Europe and North America. By Percy Evans Freke.”

7. *Merula*, "Leach, 1816" (type, *Turdus merula*, Linn.).

The proper generic division of the typical thrushes is a matter of considerable difficulty. Of the North American generic groups, *Hylocichla* and *Hesperocichla* of Baird are sufficiently isolated, the latter being represented by a single species only, the former by all the smaller spotted species, besides the Song Thrush (*Turdus musicus*, Linn.) of Europe. I find no American species agreeing at all closely with *Turdus viscivorus* (the type of *Turdus*) in form; and a generic division based wholly or chiefly on coloration being out of the question, I find no other alternative than to adopt for the Robin and other American thrushes usually referred to "*Planesticus*" of Bonaparte (1854) the name *Merula*, Leach (1816), there being no essential difference in form between the type of the latter, *Turdus merula*, Linn. (*Merula nigra*, Leach) and our Robin (*T. migratorius*, Linn.); while a number of the Neotropical species exhibit the same sexual difference in coloration as *T. merula*. I would also refer to *Merula* the following Old World forms: *Turdus pilaris*, Linn. (type of *Areocathornis*, Kaup, 1829), *Turdus atrogularis*, Temm. (type of *Cichloides*, Kaup, 1829), *Turdus torquatus*, Linn. (type of *Thoracocineta*, Reich., 1850), with perhaps some others.

135. *Vireosylvia*, Bonaparte, Comp. List. 1838, 26 (type, *Muscicapa olivacea*, Linn.).
140. LANIVIREO, Baird, Review Am. B. i. May 23, 1866, 345 (type, *Virgo flavifrons*, Vieill.?).

\* It is exceedingly doubtful whether *Wilsonia*, Bp., should displace *Myiodioctes*, Aud. Bonaparte's name occurs first in a mere list, is used only as a heading for a subgeneric group, and is unaccompanied either by a diagnosis or an indication of type. Audubon, however, only a year later, in designating the same group of birds by the new generic term *Myiodioctes*, gave an excellent diagnosis of the generic characters. It appears to us that the slight difference of date in favor of Bonaparte's name is greatly overbalanced by the pains which Audubon took to duly characterize his genus, thus conforming to the requirements of nomenclatural laws, which Bonaparte failed to do.

A subsequent examination of *Strix uralensis*, Pallas, however, reveals the fact that the latter is strictly congeneric with *S. cinerea* and *S. lapponica*, and having been made the type of a genus *Ulula* by Cuvier, in 1817, the latter name must take precedence over *Scotiaptex*, which was not founded until 1831.

*d. Species included in the catalogue which have not yet (according to the records) actually been taken within the prescribed limits.*

[The following species enumerated in the catalogue have not, to this date, been taken within the United States; but all are known to occur so near our southern border as to render it quite certain that their capture within our limits is but a question of time and investigation. There are also included in this category all the species which are peculiar to the islands of Socorro and Guadalupe and the peninsula of Lower California.]

## SOUTHWESTERN BORDER—TEXAS TO CALIFORNIA.

[The species of this list which are *peculiar* to the more elevated portions of Mexico and Guatemala (including the contiguous southern border of the United States) are distinguished by an asterisk (\*) prefixed to the number. The avi-fauna of temperate Mexico is decidedly more nearly related to that of the Western Province of North America than to the tropical fauna of the Mexican *tierra caliente* or hot coast-region. The genera of Neotropical affinities are printed in italics.]

\* "Somewhat smaller than *L. leucoptera*, but with about the same length of wing, the tail at least 10<sup>mm</sup> shorter. Distinguished by its coloration. The red in ground tone is nearest that of the "Haken-gimpel" [*Pinicola enucleator*] but everywhere darker, and saturated, as it were, with black, this color extending indefinitely both on the back as well as on the middle of the belly to the breast, as also on the lower tail-coverts. The feet are even darker colored than in *leucoptera*. The wing-bands are unaffected for the most part, although not quite so broad. This is especially seen in the first or terminal band, which begins, scarcely visible, at the edge of the wing, and remains very inconsiderable to the middle, then quickly expands to a great rounded spot. The extent of the second band is everywhere much more limited than in *leucoptera*."

"This is decidedly not a melanism, as is shown, not alone by the character of the coloration, but by the occurrence of two old males exactly alike."

"My two birds came from North America."—[Translation.]

† "The dark Linnet is nearest to this species in size, but it is easily distinguished by many features. The whole upper parts are blackish brown, with very narrow margins to the feathers of whitish and rusty yellow, which, on the rump, return to the ground color; on the sides of the head the feathers also have very fine, rusty white margins; the throat-spot is very large; the entire under parts to the middle of the belly are densely covered with many large, dark brown longitudinal streaks. Two birds killed in Lapland, June-July (sexes not determined), show a tender red on the side of the head. The

*l. Partial list of foreign birds which have been introduced to the United States, and those which have been captured after escape from confinement.*

SPECIES INTRODUCED WITH A VIEW TO THEIR NATURALIZATION.\*

1. *PASSER DOMESTICUS* (Linn.) Leach. European House Sparrow. The attempted naturalization of this bird has proved decidedly successful. The case is so notorious that further comment is unnecessary.
2. *PASSER MONTANUS* (Linn.) Stephens. European Tree Sparrow. Has become naturalized in the vicinity of Saint Louis, Mo., but the history of its introduction is unknown. (See MERRILL, Bull. Nutt. Orn. Club.)
4. *ALAUDA ARVENSIS*, Linn. Skylark. Partially naturalized in the vicinity of Cincinnati, on Long Island, and perhaps other localities.
5. *COTURNIX COMMUNIS* (Linn.) Bonn. European Quail. Introduced to various localities in the Eastern United States, and partially naturalized.

SPECIES WHICH HAVE BEEN CAPTURED AFTER ESCAPE FROM CONFINEMENT.†

1. *AMADINA RUBRO-NIGRA*, —. Brunswick, Maine, March, 1879; Leslie A. Lee. (ALLEN, Bull. Nutt. Orn. Club, April, 1880, 119.) *Hab.* India.
2. *CRITHAGRA BUTYRACEA*, —. South Scituate, Mass., in midwinter. (BREWER, Proc. Bost. Soc. xx. 271.) *Hab.* South Africa.
3. *LIGURINUS CHLORIS* (Linn.) Koch. Lowville, Lewis Co., N. Y., March 19, 1878; R. B. Hough. (Cf. Bull. Nutt. Orn. Club, Apr. 1880, 119.) *Hab.* Europe.
4. *CARDUELIS ELEGANS*, Steph. Eastern Massachusetts, many captures. (ALLEN, Bull. Nutt. Orn. Club, Apr. 1880, 120.) *Hab.* Europe.
5. *SERINUS MERIDIONALIS*, Brehm. Western Massachusetts, in winter. (ALLEN, l. c.) *Hab.* Europe.
6. *CORVUS FRUGILEGUS*, Linn. Washington, D. C., August, 1879.

An example of this species was seen by me in August, 1879, in the grounds of the Agricultural Department in Washington. It was perched in a maple tree near one of the outbuildings, was very tame, and flew laboriously, as if very recently escaped from confinement. I am, as yet, ignorant of the history of this specimen, nor have I since seen it.

7. *CONURUS XANTHOGENIUS*, Bp. *Hab.* St. Thomas, West Indies.

An example of this species, shot in a grove near Washington, by Dr. D. W. Prentiss, is in the National Museum collection. Of course it was an escaped cage-bird.

8. *CHENALOPEX AEGYPTIACA* (Linn.) Steph. Carnarsie, Long Island, Jan. 3, 1877. (AKHURST, Bull. Nutt. Orn. Club, ii. Apr. 1877, 52.) *Hab.* Southern Europe and Africa.

\*This list does not include domesticated birds.

†This list is, of course, very incomplete; it includes merely a few species, the records of whose capture I happen to have at hand. A more complete list would be desirable, but want of time forbids its compilation in the present connection.
