NEW BOOK BY STRI STAFF

David W. Roubik has just published a new book *Ecology and Natural History of Tropical Bees* (Cambridge Tropical Biology Series). The book summarizes and interprets research from around the world on the diversity of bees, emphasizing their function in tropical ecosystems and including their interaction with human populations. Its many photographs, drawings, and references qualify it as a field guide and reference for workers in both tropical and temperate research.

FOR DBASE USERS

If you need to perform a cross-tabulation on a DBase file, and have the results in another DBase file, Karl Kaufmann has written a program to do it. He also has an example of a data entry program that facilitates entering data in Browse mode. If you want copies of these programs, send him a blank floppy disk at Surfside.

NEW FAX

William Eberhard and Mary Jane West-Eberhard, STRI staff resident in Costa Rica, can now be reached by FAX using their phone # 506-28-0001. It is essential not to use the telephone handset when transmitting a FAX, since this will cause it to enter as a phone call not transferrable to FAX. Consult with Maria Morello, Tivoli, for instructions if necessary.
