109  President and Mrs. George H.W. Bush, Lady Bird Johnson, President and Mrs. Clinton, President and Mrs. Gerald R. Ford, and President and Mrs. Jimmy Carter.
110  The Bellangé chairs are moved to the transverse hallway for seating for the former, and current, Presidents and their wives during the bi-centennial of the White House.
111  First Lady Michelle Obama on the cover of *Condé Nast Travler* next to the Bellangé armchair in the Blue Room, 2010.
112  The President holds a meeting in the Blue Room in 2010, using the Bellangé chairs for seating.
113  A Bellangé side chair on view in the White House Visitors Center,
114  President Barack Obama standing in front of the Bellangé bérgère.
Acknowledgements:

First and foremost, I would like to extend my deep appreciation to the Director of my Masters program, Cynthia Williams. Without her tireless dedication to students, like myself, in the History of Decorative Arts program, I would in no way be able to produce work of this caliber. Through Cynthia’s efforts, I received an unparalleled education from some of the finest instructors in the Decorative Arts field. To her, I am indebted.

I would also like to extend my sincere thanks to Melissa Naulin, the White House Assistant Curator. Since the first days of research, Melissa has made herself available to me with the many questions I produced for her. She took interest in helping with the many unknowns of this project, and together we addressed them with success.

William Allman, the White House Curator, has also been instrumental in my research with all of the outstanding work he has accomplished thus far with the White House collection. His predecessor, Betty Monkman, lent her knowledge to me through phone conversations and emails to help me produce the most accurate work possible. She is truly a remarkable and admirable person and professional.

My correspondence and meetings with Kelly Cobble, Curator for the Adams National Historic Site, John Pearce, Director of the James Monroe Law Office and Museum, Patrick Sheary, Curator of the DAR Museum, John Pearce, Curator of the Woodrow Wilson House, Yuko Nii, founder of the Williamsburg Art & Historical Center, Jeanne Fogle, Washington, DC, historian, Anne-Marie Quette, French
decorative arts expert, Ulysses Grant Dietz, Curator of the Newark Museum, Sarah Georgini from the Massachusetts Historical Society, and the staff of Winterthur, the Smithsonian Institution, the Library of Congress and the National Archives were all invaluable in the information and insight I was given on the Bellangé suite and their existing primary resources.

Additionally, William Seale, renowned White House historian, scholar, and editor of the White House Historical Association’s *White House Journal*, has truly been the best resource for information imaginable. Mr. Seale surpassed my expectations with the knowledge he provides in his literature, but also in his kind advice and suggestions. Without his guidance, I would not have received the important information and insight he has acquired through his extensive work with the White House and Presidency.

I reserve my deepest appreciation for Dr. Oscar Fitzgerald, furniture historian, author, professor, and mentor. I owe my love of furniture and its study to Dr. Fitzgerald, who has challenged me for the past two years in my coursework, and now in my thesis. As my thesis advisor, Dr. Fitzgerald has displayed the utmost patience and sincere concern for my work, making it the best it can be. I am so honored to have his name attached to my thesis.

Generosity from the Decorative Arts Trust, by way of the 2010 Dewey Lewis Scholarship, contributed to my research and travel to Quincy, Massachusetts, to see the Adams National Historic Site. This was an invaluable experience and I am grateful for their enthusiasm and encouragement.
To my friends and family, thank you so very much for your patience and understanding while I researched and wrote my thesis. Although I completely removed myself from some of your lives for nine months due to the all-encompassing manner of my work, I know you understand my absence lost, but will let me make up for it in the future.

To my co-workers at the White House Historical Association, thank you for being so flexible with my work schedule and allowing me to have one day a week for my thesis. I am not only grateful for such a fantastic work opportunity, but also for such a wonderful work environment.

Finally, I would like to dedicate the research, writing, and final product of this thesis to my parents, Douglas and Carolyn Jones. Everything I have accomplished in life is a direct result of their guidance and love. Without them, all of the sacrifice, stress, and work that went into this project would mean nothing. They are my greatest teachers, critics, and fans. I hope this makes you proud.
Chapter 1: Furniture of Dignity and Grandeur Befitting such a State

George Washington envisioned the President’s House as being a residence for the Head of State, operating as a physical embodiment of the American ideal: rational, structured, and authoritative (Figure 1). This vision included far more than just an architectural shell; equal emphasis was put on the interior space as it acted as a national and international venue for the governing of American policy and diplomacy. The President’s House was, and is today, a patriotic monument, meticulously tended to, in order to poignantly promote what the United States is: a country based on the principles of freedom and democracy (Figure 2).

The fifth President of the United States, James Monroe, had to reinvent the Washingtonian principles in 1817 while acting as the overseer for the reconstruction and refurnishing of the President’s House following its burning by the British in 1814 (Figures 3 & 4). Washington’s work with James Hoban on the original house was carefully calculated so that the end product was the greatest home in the nation and as splendid as the “first buildings of Europe.” This work was one of the earliest and most crucial moments of Monroe’s Presidency. Although his predecessor, James Madison, was in charge of initiating reconstruction of the President’s House, James Monroe oversaw the final architectural plans and outfitting the interior, with the ultimate objective being a series of rooms, reflecting and promoting classical American ideals. Additionally, Monroe was conscious of contemporary fashions and made sure what filled the President’s House could be a source of national pride and in good taste. He chose to outfit the cavernous rooms of the house with a variety of furnishings, both of his own personal collection and
custom creations from the United States and abroad. Although a Madison
administration appointee, Commissioner Samuel Lane, was officially designated to
oversee the project, Monroe made sure he had a hand in the decision making
process. To secure his inclusion in the choice of furniture, he personally
commissioned an import firm, Messrs. Joseph Russell and John LaFarge of New York
and Le Havre, to accumulate furniture, textiles, ceramics, and silver from America
and abroad to befit such a place.iii In early nineteenth-century America, Russell and
LaFarge were known as the top import agents of European goods for wealthy
Americans.

Although the firm of Messrs. Russell and LaFarge took charge of furnishing all
of the President’s House, the most well-known, and highly publicized, commission
they brought to Washington was a fifty-three piece suite of gilt émpire seating
furniture and pier table by the French master ébéniste Pierre Antoine-Bellangé for
the large elliptic room where foreign dignitaries entered and were received.
Bellangé was fifty-nine at the time, and his successful career would extend for
another ten years. Although Monroe accepted public credit for the interiors of the
President’s House, in fact his only hands-on involvement in the order was the
suggestions he provided for the furniture’s decorative motifs: richly polished
mahogany furniture adorned with eagles (Figure 5).iv Russell and LaFarge went to
Paris to find such items and worked with what was available in keeping with the
Monroe’s preferences, as well as attempting to keep within the limit of allocated
federal funds.
The importance of the furniture chosen was salient. Monroe and the agents knew the objects chosen would make a statement, and it was important they made the right one. In addition to their symbolic function, the seating furniture would act as a resting place for the President, the President’s family, visiting kings, queens, princes, princesses, and the like. Thus, it was essential that the choice furnishings should be made by the premiere cabinetmaker of the day, of the finest materials, and stably constructed. The intended atmosphere of the elliptic room, as both a place for socializing and diplomacy, was dependent upon the furnishings. Monroe wanted nothing more than the absolute best, and at the time, France was the lead producer of the finest furniture.

The elliptic room, on the south side of the house, was designed to act as the formal entrance to the President’s House, giving the Bellangé suite the important role in welcoming guests (Figures 6 & 7). Visitors drew their first impressions of the President and the nation from these fine objects. The North Portico, later added by President Andrew Jackson, now acts as the formal entryway to the President’s House.

The gilded surface of the Bellangé suite transmitted a brilliant glow both by sun and candle light. This brilliance, however, came with a substantial price tag. The United States suffered a massive debt from the War of 1812, and allocating a large portion of tax dollars to fancy furniture did not hold the highest position on the government’s priority list. A request for less-expensive, ready-made furniture was made before the Bellangé suite was ever ordered. Upon arrival in France, the agents were told pre-made furniture was practically impossible to come across for a
Commissioner Lane wrote to Monroe explaining Russell and LaFarge’s inability to find readymade furniture in Paris:

Sir [President Monroe]: Our Mr. Russell having been detained at Bordeaux by business, transmitted to us the orders he received from your Excellency for the purchase of the furniture for the palace of the President at Washington... Our Mr. LaFarge went to Paris in the beginning of June for this purpose, when the result of his inquiries soon convinced him that there was no possibility of purchasing anything ready made, and in order to comply with the instructions of your Excellency of 23 April, he was under the necessity of ordering the whole of the furniture to be made, that he might be sure to obtain such articles in united strength with elegance of forms, and combining at the same time simplicity of ornament with the richness suitable to the decoration of a house occupied by the first Magistrate of a free Nation.\textsuperscript{v}

Commissioning American cabinetmakers to create the elliptic room’s important furnishings was always possible; New York, Philadelphia and Baltimore were thriving cities at this time with well-known cabinetmakers who could provide for their President. Washington, DC, also had widely known cabinetmakers, such as William King (Figure 8) and William Worthington (Figure 9). Both of whom did produce furniture for Monroe, but for less formal spaces. Just a few years prior to the burning of the President’s House, Dolley Madison, wife of President James Madison, had furniture designed by Benjamin Henry Latrobe for the elliptic room made in the latest French “antique” fashion by the Baltimore cabinetmakers John and Hugh Finlay (Figures 10 & 11).\textsuperscript{vi}

The \textit{Intelligencer}, a Washington newspaper, reported on November 29, 1817, that the President had, in particular, “[taken] care... to have as much furniture made [in] Washington as possible.”\textsuperscript{vii} The President’s use of tax dollars to import goods saw little public opposition. The practice of importing fine objects from abroad to
outfit a home was still widely accepted in America. Countries other than France were also exporting furniture to the United States. Spain, Italy, Portugal, Germany and Austria all had major furniture export industries. However, in 1817 the United States and France shared an alliance with one another reflecting their support of either's revolutionary efforts. This political kinship, combined with France’s production of high-style furnishings, made it the best resource. France’s superiority in furniture design, production, and exportation was known by other countries as well; art historian and James Monroe scholar Hans Huth discovered that governments, other than the United States, regularly sent to Paris for goods, as it was “the center for industrial arts.” Bellangé himself provided furniture to other international magistrates, including a suite of furniture for the King of England at Windsor Castle.

The English were also well-known for their furniture trade, at the time producing the *Regency* style (Figure 12). However, the Bellangé suite, being imported furniture for the President’s House, embodied the interrelationship of politics and aesthetics. Although the Treaty of Ghent ending the War of 1812 had been signed December 24, 1814, Americans were still smarting from the devastation wrought by the war. There was no option for the President’s House to be furnished with objects from the country which destroyed the original house. America’s relationship with France, Russell and LaFarge’s familiarity with the importation of French objects, and Monroe’s preference for the French design synced with contemporary thoughts on patriotism, politics, and aesthetics.
In order to obtain “suitable richness” in furnishings, Parisian cabinetmaker Pierre-Antoine Bellangé, was one of the most qualified candidates for the commission (Figure 13). By 1817, he served as the lead ébéniste to the court of Napoleon I and Joséphine Bonaparte (Figure 14). Despite Napoleon I’s exile from France, 1815 to 1818, Bellangé was one of the few ébénistes to keep his profession, and life, continuing his work under Louis XVIII, Charles X, and Louis-Philippe. His furniture commissions survive in the collections of Windsor Castle, the Hôtel de Beauharnais, Versailles, Chantilly, the German State collections, and the Williamsburg Art and Historical Center of Brooklyn (Figure 15). The selections in Brooklyn are said to have been a commission by Napoleon I’s brother, Joseph Bonaparte. Joseph reigned as King of Naples, Sicily, Spain, and the Indies in his brother’s empire (Figure 16) prior to leaving Europe for Point Breeze, New Jersey following the fall of his brother’s empire.

For the elliptic room, Monroe asked for a suite of mahogany furniture with an eagle motif incorporated. Throughout the eighteenth and early-nineteenth century, mahogany was the most fashionable wood to have furniture made from for Americans. American cabinetmakers, like New York’s Duncan Phyfe and Charles-Honoré Lannuier, produced furniture with mahogany imported from South America. Unfortunately for Monroe, Bellangé no longer produced furniture with mahogany as it was now out of fashion in high-style European furnishings. The 1805 Étiquette du Palais Impérial, a guidebook on design and etiquette for the French elite, suggested the use of gold leaf-covered furniture in stylish interiors (Figure 17). Bernard Chevalier, Curator of Josephine Bonaparte’s residences at Malmaison and Bois-
Préau, believes this alteration was a part of Napoleon’s promotion of France’s native woods: beechwood, burr cedar, elm, or ash. A letter addressed to President Monroe, from the agents, declared, “mahogany is not generally admitted in the furniture of a Saloon, even at private gentleman's houses.” Knowing Monroe wanted the best and most fashionable, the agents ordered the following: “[a] set of drawing-room furniture of gilded wood carved with branched olive leaves and covered with a heavy satin material of a delicate crimson color, with a pattern of laurel leaves in two tones of gold.” The image of an eagle was woven into the upholstery in order to fulfill Monroe’s request for eagle ornament (Figure 18). A friend of Monroe’s, James Brown of Baltimore, was in Le Havre, France, while the agents attended to the President's orders. Per Monroe’s request to hear on the furniture’s status, Brown wrote to him about the use of the eagle on his furniture, sharing information from the agents:

He [Russell or LaFarge] informed me that he had directed the eagle to be placed on the chairs and some other parts of the furniture, but that the bird being in bad repute at court the workmen were ordered to desist and told that special permission must be obtained to enable them to execute the work… Mr. Russell’s partner sets out for Paris next week. Presume, upon giving proper assurance that this bird of evil omen will speedily take flight to America, he may be permitted to perch upon the furniture of the Government house.

The agents probably did not ask for further permission to have the eagles incorporated into the carving after the denial of their initial request for it, especially in following Monroe’s orders in an April 23, 1817, letter, which directed the two men not to mention where the furniture was going and the purpose it served.

French politics played heavily into the furniture trade at the time. The defeat of Napoleon I and the restoration of the Capetian Dynasty by Louis XVIII in 1815
