SMITHSONIAN INSTITUTION

MUSEUM PROGRAMS, SCIENTIFIC AND CULTURAL RESEARCH  
(SPECIAL FOREIGN CURRENCY PROGRAM)

LIST OF PROJECTS

Submitted as a supplement to the  
fiscal year 1975 budget.

February 1974

MUSEUM PROGRAMS, SCIENTIFIC AND CULTURAL RESEARCH  
(SPECIAL FOREIGN CURRENCY PROGRAM)

LIST OF PROJECTS

This list of illustrative projects submitted in support of the appropriation request for FY 1975 is based upon 1) on-going research projects of United States institutions already being supported by the Smithsonian in countries where the United States has accumulated local currencies in "excess" to its needs; 2) similar pending research projects being developed which have either been approved in principle or are in the process of review both by the Smithsonian and by the government of the appropriate "excess-currency" country; and 3) new research projects which represent the Institution's selection of those illustrative projects which appear most promising for development and possible funding during FY 1975. New projects listed are based on firm indications of interest from United States institutions and scholars contemplating research abroad.

Actual funding of all new projects, and of those pending projects not yet finally approved, remains contingent upon 1) favorable competitive review on the basis of merit by scholars most competent to judge the worth of each proposal (regularly constituted Advisory Councils assist the Smithsonian in making this competitive review of proposals); 2) review and approval of each project as not contrary to the United States national interest by the Department of State and American embassies abroad; 3) review and approval of each project by the appropriate agency of the host country; 4) where required, conclusion of a satisfactory agreement between the United States grantee of the Smithsonian and an appropriate collaborating institution in the host country.

In the same fashion, on-going projects are subject to continuing competitive review, if funding is to be continued.

This means that Smithsonian Foreign Currency Program funds are committed both by discipline and by country in accordance with the best judgment as to the competitive merit of each project. The following "List of Projects" represents the Institution's best judgment at this time as to how funds, available and requested, will be committed. However, some of the projects listed could be eliminated by an unfavorable review, a finding that the project was not in the U.S. interest, a failure of the host country to approve the project or, in the case of joint projects, a failure of the American and host country collaborators to agree on the conduct of the project.

On the other hand, projects not anticipated in this illustrative list but submitted to the Smithsonian Foreign Currency Program by United States institutions could prove to have greater acceptance, both here and abroad, and hence be funded ahead of or in place of some of the projects listed.

Because Morocco was removed from the Treasury Department's list of "excess currency" countries at the end of Calendar Year 1972 and Yugoslavia is expected to be removed at the end of FY 1974, no further appropriations are requested for the projects listed here under Morocco or Yugoslavia. Nevertheless, it is necessary to enumerate these projects in order to give an accurate picture of the current activities of the Institution's Special Foreign Currency Program.

(SPECIAL FOREIGN CURRENCY PROGRAM)  
Fiscal Year 1975

LIST OF PROJECTS

A. ARCHEOLOGY AND RELATED DISCIPLINES

I. BURMA

a. On-going and Pending Archeology Projects in Burma

1. Institution	Title of Project
<u>University of Hawaii, Honolulu, Hawaii</u>	The Late Pleistocene and Early Holocene Prehistoric Culture of the Dry Zone of the Irrawaddy River Valley, Burma

This study of the material culture of the peoples who inhabited what is today Burma in the middle and new "stone age" is proposed by the same American scholar who has recently demonstrated that Southeast Asia may be a "cradle of civilization" to vie with Mesopotamia. The project is particularly important in that it would constitute a "first" in cooperation between an American university and the Ministry of Union Culture in Rangoon.

None

II. EGYPT

a. On-going and Pending Archeology Projects in Egypt

Institution	Title of Project
2. <u>American Research Center in Egypt, Princeton, New Jersey</u>	Research Activities of the American Research Center in Egypt (ARCE)

The Center, a consortium of 15 U.S. universities and museums, serves as an indispensable liaison with the Government of Egypt for all American scholars attempting to work in the country. Their research projects are carried out, directly or indirectly, under its auspices. In the absence of official diplomatic relations between Egypt and the United States, the Center continued to maintain an American cultural presence in the country, which is much appreciated especially by those Egyptians who value relations with America and the West. ARCE projects active in 1973-74 include the continuing epigraphic survey of the Egyptian monuments in Luxor by a team from the Oriental Institute, University of Chicago, excavation in the pyramid area at Giza, excavations at the Islamic site of Fustat in Old Cairo, and a study of Biblical themes in Coptic and North African art. The University of Pennsylvania's Akhnaten temple project is entering its second year under the administration of ARCE. (See the following project, number 3, for the history of the Akhnaten research.)

U.S. Dollar Equivalent in Egyptian Pounds	FY 1975 est.	200,000
	FY 1973	643,000
	FY 1972	434,000

	FY 1970	26,000
	FY 1969	109,000
	FY 1968	202,000
	FY 1967	177,000
	FY 1966	259,000

## Institution

## Title of Project

5. Smithsonian Astrophysical Observatory, Cambridge Massachusetts      The Stellar Alignment of the Egyptian Temples at Karnak

The same astronomer who demonstrated that the massive megaliths at Stonehenge in England were erected by a prehistoric people who demonstrated a considerable and surprising knowledge of astronomy believes that the ancient Egyptians too lined up the temples they built with the sun and the stars. This view has often been put forward as a theory, but nobody has ever adequately tested it, primarily because astronomers have little knowledge of archeology and archeologists have little knowledge of astronomy. In this project an astronomer proposes to team up with an Egyptologist and try to answer the question of the heavenly orientation of the massive Egyptian temples at Karnak once and for all.

	FY 1974 est.	7,000
	FY 1973	7,000
	FY 1972	----
	FY 1971	1,000

6. University Museum University of Pennsylvania Philadelphia, Pennsylvania      Excavation within the Town and Harbor Site of Malkata, Western Thebes

This project proposes excavation of selected areas within the palace town of King Amenhotep III (1417-1379 B.C.), and will concentrate upon the harbor of the town, showing in detail how the civilization of ancient Egypt depended upon the Nile to hold itself together. The important period involved is the New Kingdom period in ancient Egyptian history (ca. 1570-730 B.C.).

U.S. Dollar Equivalent in Egyptian Pounds	FY 1975 est.	80,000
	FY 1974 est.	78,000
	FY 1973	52,000
	FY 1972	27,000
	FY 1971	28,000

7. University of Michigan Ann Arbor, Michigan      Art and Technology of Graeco-Roman Lamps in Ancient Egypt

Although the people of Egypt are related to the Semitic peoples who live around them, the country was for centuries a center of Greek culture and was famous as the "granary" of the Roman Empire. This study will increase our knowledge of trade associations around the Mediterranean and Graeco-Roman influence on Egypt in antiquity. Thus, a major gap in our knowledge of the ancient Mediterranean civilizations can be filled by this relatively modest research project.

U.S. Dollar Equivalent in Egyptian Pounds	FY 1975 est.	2,000

## Institution

## Title of Project

8. Smithsonian Institution  
Washington, D.C. U.S. Contribution to UNESCO's  
Nubian Monuments Campaign--  
The Temples of Philae

The final United States contribution to the study and conservation of the archeological sites and ruins in the Nile Valley to be inundated by waters impounded by the Aswan High Dam is proposed. President Kennedy proposed in 1961 that the United States make a contribution to the salvage of the temples on the Island of Philae along with three other contributions which have already been made. In making this final contribution, the United States would join at least 18 other nations, as well as Egypt, in salvaging the most important temples of the late Pharaonic, Greek, Roman and early Christian periods in Egypt. (See page B-3 of the Smithsonian Budget Justifications for the Fiscal Year 1975).

U.S. Dollar Equivalent in Egyptian Pounds	FY 1975 est.	1,000,000
	FY 1974	1,000,000

9. Southern Methodist  
University, Dallas,  
Texas The Prehistory of Central Egypt

Egypt today is largely desert yet in antiquity it offered man wide areas in which to thrive and create an early and highly advanced social system. Through a study of the geology and prehistoric archaeological remains of the Egyptian desert, this project has established a chronology of environmental changes and the appearance and development of early man.

U.S. Dollar Equivalent in Egyptian Pounds	FY 1975 est.	36,000

	FY 1973	29,000
	FY 1969	40,000
	FY 1968	33,000

Institution	Title of Project
10. University of Kentucky, Lexington, Kentucky	Archaeological Excavation at Qasr Ibrim, Egyptian Nubia

Much of the site of Qasr Ibrim has been inundated by waters of the lake formed by building the Aswan Dam across the Nile River, but the fortress area stands above the waters on a rocky promontory. Here were located major religious centers from as early as 1600 B.C. and provincial capitals at various periods throughout the next three thousand years. Excavation within the fortress walls has revealed that Qasr Ibrim may have been the place of residence of the little known Nubian 'X-group' (Ballana) kings who reigned from about 400 A.D. to about 600 A.D., the immediate pre-Christian period in Nubia. In addition to investigating the exciting prospects of the 'X-group' royal center this project has concentrated on uncovering evidence of the way of life of the ordinary people who inhabited this site during its many centuries of occupation.

b. New Archeology Projects in Egypt

- | Institution   | Title of Project                                     |
|---|--|
| 11. <u>American Research Center<br/>in Egypt, Princeton,<br/>New Jersey</u><br>(A Consortium of 15<br>United States research<br>institutions) | Excavations of the Ancient<br>City of Memphis, Egypt |

The impact of successive Greek and Roman conquerors on the daily lives of the native people of the Pharaonic City of Memphis is the subject of this study.

U.S. Dollar Equivalent in Egyptian Pounds    FY 1975 est. 20,000

- |  |                                 |
|--|---------------------------------|
| 12. <u>American Research Center<br/>in Egypt, Princeton,<br/>New Jersey</u><br>(Institute for Antiquity<br>and Christianity,<br>Claremont, California) | Editing the Nag Hammadi Codices |
|--|---------------------------------|

In 1945-46 peasants unearthed near Nag Hammadi, Egypt, thirteen papyrus manuscripts which contain approximately fifty-three essays pertaining to the Gnostic religious movement in the first centuries after Christ. Contents of the manuscripts, when made available to scholars, will provide important additions to our knowledge of the development and climate of early Christianity. Funds are being requested to complete the Institute for Antiquity and Christianity's well-advanced project of reassembling the manuscripts from fragments and photographs and publishing complete facsimiles as well as an English translation.

U.S. Dollar Equivalent in Egyptian Pounds    FY 1975 est. 42,000

|---|--|
| 13. <u>American Research Center<br/>in Egypt, Princeton,<br/>New Jersey</u> | Support for Research<br>Fellowships of American<br>Students working in Egypt |
|---|--|

Research projects of American graduate students (Ph.D. candidates) include a study of the god Bes and his place in the culture of ancient Egypt and a study of tomb relief sculpture in the seventh century B.C.

U.S. Dollar Equivalent in Egyptian Pounds    FY 1975 est. 30,000

Institution	Title of Project
14. <u>University of California</u> <u>Los Angeles, California</u>	Radio Carbon Dating of Pre-Dynastic Period Collections in Egypt

Recent refinements in Carbon-14 dating techniques have made it possible to pinpoint the dates of material recovered from archeological excavations much more precisely than is possible using contextual evidence. Application of Carbon-14 analysis to materials of the pre-dynastic period (prior to 3,000 B.C.) is of particular importance since supporting data is scarce for the years prior to foundation of Egypt's highly organized governmental systems. The project is intended to date as nearly as possible the pre-dynastic materials in Egyptian museums in order to improve the validity of collections for both scholarly study and museum education.

IV. INDIA

a. On-going and Pending Archeology Projects in India

Institution	Title of Project
15. <u>American Institute of Indian Studies, Chicago Illinois</u> (A consortium of 26 universities and colleges)	Support for the Center for Art and Archeology at Benares

Of the major eastern civilizations of the world, India's is the least known in the West. The Center aims to document and photograph key parts of India's vast art treasures in an effort to determine simply what is there. The results of this inventory are of great benefit and interest to the American scholars and institutions attempting to study the unique civilization of one of the most important countries in the world today. Hard dollar support to supplement the rupees being provided by the Smithsonian comes from the JDR III Fund.

FY 1966	77,000	

16. <u>American Institute of Indian Studies, Chicago Illinois</u>	Support for the AIIS Centers in India, and for Research Fellowships for American Scholars Working in India
---	--

It would be virtually impossible for any American attempting to perform research in the social sciences and humanities in India to attempt to do so without the facilities provided by the Center--they would not be able to get housing, visas, transportation, permits to work, and so on, without the support of the Center. Since the Center enjoys the highest reputation with the Government of India, the increasing number of Americans who are turning their attention to the study of this vast subcontinent are the beneficiaries of the indispensable services rendered by the Center.

	FY 1974 est.	5,000
	FY 1971	3,500

18. University of Hawaii  
Honolulu, Hawaii      To initiate Excavations in Northern India in Conjunction with the Archeological Survey of India

The nature of early man's culture in Northern India is almost completely unknown and represents a considerable gap in our knowledge, especially when compared to what we know about early man in surrounding areas of South Asia such as the Indus Valley, Ceylon, Thailand. The University of Hawaii has gained considerable experience in working in Asia through its well-known East-West Center, and would be able to apply techniques and compare materials based on its existing background in Asia and the Pacific.

U.S. Dollar Equivalent in Indian Rupees	FY 1975 est.	3,000
	FY 1974 est.	7,000
	FY 1973	3,000
	FY 1971	2,500

19. Colgate University  
Hamilton, New York      Raksha: Documentation on Film Tape and through Anthropological Methods of India's Disappearing Traditional Performing Arts

As is true of so many facets of traditional cultures faced with rapid modernization, India's extremely rich tradition of song and dance, both of the "folk" variety and of a highly sophisticated professional type, is in danger of dying out. This project aims both to preserve and document performing art forms still exemplified by living performers and to the extent possible encourage the continuation of these forms. It has been only in the past few years that the music and dance of India have gained some popularity in America through Indian films and performances. At precisely the moment these Indian performing arts are gaining new audiences they are in danger of disappearing.

	FY 1973	---
	FY 1972	33,000

22. <u>Association for Asian</u> <u>Studies, Ann Arbor,</u> <u>Michigan</u>	Linguistic Research In India
---	------------------------------

The modern science of linguistics in America has led the world in the variety and sophistication of its techniques. The study of man's culture through his language can nowhere be more fruitfully studied than through analysis of man's languages. Techniques which are commonplace in this hemisphere, however, have yet to be widely applied in South Asia where it is proposed that this study be conducted.

U.S. Dollar Equivalent in Indian Rupees	FY 1975 est.	18,000
	FY 1974 est.	18,000

Institution	Title of Project
23. <u>American Institute of Indian Studies, Chicago Illinois</u>	Documentation of Ritual Art Forms as Communication Systems of Traditional Cultures

This project involves the documentation on film and tape, as well as the translation of pertinent Sanscrit dramas, related to the traditional ritual art forms of India. It has long been recognized how important has been the role of these ritual art forms in the culture of India. Modern methods of study will not only yield important data relative to change and development in India but will serve to preserve these forms as one of the important human cultural expressions.

25. <u>National Museum of Natural History, Smithsonian Institution</u>	Study and Collection of Ethnographic Materials Characteristic of Present-day Life in Bhutan
--	---

The remote, Himalayan Mountain nation of Bhutan is little known in the West. It is proposed to study the daily-life of the people of this Buddhist culture, collect typical personal and household objects, and to prepare an exhibit for the Smithsonian and for other interested institutions in the United States portraying the life of the people in this oriental Kingdom which is rich in fine arts and ancient crafts.

U.S. Dollar Equivalent in Indian Rupees	FY 1975 --- FY 1974 --- FY 1973 8,000
---	---

Institution	Title of Project
26. <u>Smithsonian Institution</u> <u>Libraries,</u> <u>Washington, D. C.</u>	Smithsonian - National Science Foundation Translations Program

The National Science Foundation, under its special foreign currency translations program, provides translations services on scientific subjects for various federal agencies, apportioning its own budget for this purpose. Under an inter-agency agreement, the Smithsonian transfers additional funds from its own Special Foreign Currency Program to the NSF to support additional translations urgently needed to support Smithsonian scientific programs.

U.S. Dollar Equivalent in Indian Rupees	FY 1975	---
	FY 1974	17,000

b. New Archeology Projects in India

Institution	Title of Project
27. <u>University of Texas</u> <u>Austin, Texas</u>	A Multi-National Study of Ancient Indic and Indo- European Languages and Cultures

Many languages, ancient and modern, of Asia and Europe have grown out of an ancient Indic language. This common origin of today's group of Indo-European languages still lies shrouded in the mists of pre-historic time. This study, which would draw together scholars of all nations specializing in the study of Indo-European languages and cultures, proposes to shed light on this major phase of the development of language.

U.S. Dollar Equivalent in Indian Rupees      FY 1975 est. 30,000

28. <u>University of Michigan</u> <u>Ann Arbor, Michigan</u>	Genetic Effects of Inbreeding on Indian Children
---	---

Intermarriage within near degrees of consanguinity has long been known to have marked effects upon the genetic inheritance of the children of such unions. In many cases, the children are born with genetic defects. This project thus represents a dimension of Anthropology which could have important implications for human health. The Principal Investigators conducted a classic genetic study at Hiroshima. The marriage habits of the particular subgroup they wish to study in India constitute almost an ideal control group for this study.

VI. PAKISTAN

a. On-going and Pending Archeology Projects in Pakistan

Institution	Title of Project
30. <u>National Museum of Natural History Smithsonian Institution Washington, D.C.</u>	Disappearing Ancient Technologies of Pakistan

With the spread of industrialization around the world, crafts and techniques which have been carried on for millenia are in the process of disappearing in our lifetime. The aim of this project is to document and salvage what can be saved of these crafts and techniques as well as the materials used, many of which can find uses even in the modern world. It is expected that a small scale crafts industry can be maintained as a result of this study which will not only provide saleable hand-made objects to tourists but will help Pakistan's difficult foreign exchange and employment situations by providing a saleable craft product.

U.S. Dollar Equivalent in Pakistani Rupees	FY 1975 est.	32,000
	FY 1974	60,000

31. <u>Office of the Assistant Secretary for Museum Programs and Conservation Laboratory, Smithsonian Institution, Washington, D.C.</u>	Study and Application of Techniques for the Conservation of the Indus Valley Civilization City of Moenjodaro
---	--

The Indus River valley has a civilization at least as old as the Nile or the Tigris and Euphrates River Valleys. One of its few great city excavations, Moenjodaro, is threatened with complete destruction because the water table is higher today than at the time the city flourished. As a consequence, moisture, carrying with it corrosive salts, penetrates the ancient bricks causing the walls to crumble. It is proposed to marshall American conservation talent to seek ways to prevent the deterioration of what remains of this ancient city.

U.S. Dollars Equivalent in Pakistani Rupees	FY 1975 est.	20,000
	FY 1974 est.	3,000
	FY 1973	2,000

Institution	Title of Project
35. <u>National Museum of Natural History, Smithsonian Institution, Washington, D.C.</u>	Survey of Islamic Archeological Sites in Pakistan

The history of Islamic civilization has been neglected in the West until recent years. The vital role of these petroleum producing lands in the life of the industrialized nations and the rising national consciousness of Islamic peoples has focussed attention on this field. Although considerable attention has been paid by archeologists to the ancient civilizations of the Indus River valley, the early centers of Islamic culture in that area have been relatively neglected. A survey of potentially important sites is a necessary prelude to further investigations.

U.S. Dollar Equivalent in Pakistani Rupees	FY 1975 est.	9,000
	FY 1974	17,000
	FY 1973	12,000

36. <u>University of Pennsylvania Philadelphia, Pennsylvania</u>	Population and Culture on the Iranian Plateau (Pakistan)
--	--

The desert areas of the Iranian Plateau, which today straddles the national boundaries of Pakistan, Afghanistan and Iran, have historically functioned as a refuge for people. Migration into these areas has been determined by the balance between population and resources in the regions surrounding them, and the culture of the peoples has been dominated by that of the communities surrounding them. There has been little change. Data gathered by this inter-disciplinary study would increase understanding of the inter-action of demographic with social and cultural processes.

U.S. Dollar Equivalent in Pakistani Rupees	FY 1975 est.	20,000
	FY 1974	2,000

Institution	Title of Project
37. <u>Yale University</u> <u>New Haven, Connecticut</u>	Search for and Excavation of Quarriable Localities in the Siwaliks, Pakistan

Geological strata formed some 10 to 30 million years ago are exposed in the Siwalik hills in South Asia, in the Faiyum region in Egypt and in the Rift Valley in East Africa. Studies in each area are producing fossil mammals from the time of man's earliest development and, in some cases, fossils of man's primate ancestors. Fossil mammals have been known from the Siwalik range in Pakistan and India for more than a century, but earlier mammal finds consisted mainly of larger specimens because techniques were restricted to surface collecting for India. Only a previous Yale expedition succeeded in recovering fossils of small mammals by employing intensive quarrying, washing and screening techniques. The proposed project seeks to recover similar microfauna and micromammals in Pakistan in the vital search for a better understanding of man's evolution.

VII. POLAND

a. On-going and Pending Archeology Projects in Poland

Institution	Title of Project
40. <u>State University of New York, Buffalo, New York</u> (Formerly a University of Michigan project)	The Earliest Neolithic Settlements in Poland

Much of what is known about early man has been uncovered on the continent of Europe, but the opportunities of American scholars to participate in this work has been limited by the extra funds required to work abroad and limited access to the best site. This is the only American excavation which has been allowed in Poland in recent years. It has provided unusual cultural links between Polish and American scholars which have been difficult to establish and maintain during the era of the Cold War. The Polish-American collaboration on this project has proved so successful that a new series of excavations at Neolithic settlements in Poland is being initiated by the team in order to expand knowledge of the prehistoric environment and inhabitation of the area which today is Poland.

U.S. Dollar Equivalent in Polish Zlotys	FY 1975 est.	70,000
	FY 1974 est.	86,000
	FY 1973	58,000

	FY 1967	22,000

b. New Archeology Projects in Poland

Institution	Title of Project
41. <u>University of Missouri, Columbia, Missouri</u>	Study of Polish Early Medieval Archeology

Poland contains many monuments and settlements dating from the early middle ages, some of which are intact and have been in continual use but others of which are accessible only to the skilled archeologist. Polish archeologists have developed highly advanced techniques for use in their study of the early medieval settlement sites and in interpreting materials recovered from those excavations. The University of Missouri proposes to send one of its most outstanding post-doctoral research scholars whose specialization is archeology of the early medieval period in Europe, to work with archeologists at the Polish Institute for Material Culture to participate in excavations currently under way and to study material from current and earlier excavations.

U.S. Dollar Equivalent in Polish Zlotys      FY 1975 est. 15,000

42. <u>Southern Methodist University, Dallas, Texas</u>	Recent Developments in Techniques of Analysis of Old Stone Age Artifacts.
---	---

Computers serve the prehistoric archeologist in identifying the types of stone tools, which are the principle relic of these ancient societies, and in analyzing the distribution of the tools of different kinds in prehistoric settlements to show what the pattern of family and community life was. Collaboration with the Institute for the History of Material Culture of the Polish Academy of Sciences is proposed.

VIII. TUNISIA

a. On-going and Pending Archeology Projects in Tunisia

Institution	Title of Project
43. <u>Dumbarton Oaks Center for Byzantine Studies Washington, D.C. and University of Iowa, Iowa City, Iowa</u>	A Corpus of the Ancient Mosaics of Tunisia

The Tunisian mosaics are among the most distinctive of the mosaics which the ancient romans left. Some unique ones of the Christian period remain in Tunisia. These priceless treasures are being exposed one by one because of rapid urban development and unless taken up, and transported to safety in a museum, or preserved in some other fashion, they will be lost to humanity. The "corpus" of Tunisian mosaics being prepared by this project includes a complete, detailed description of each mosaic unearthed; all this data will henceforth be available generally in university and museum libraries.

II. EGYPT

a. On-going and Pending Biology Projects in Egypt

Institution	Title of Project
49. <u>National Museum of Natural History, Smithsonian Institution, Washington, D.C.</u>	A Serological and Ectoparasite Survey of the Migratory Birds of East Africa

Based in Egypt, this project traps representative birds migrating through Northeastern Africa, collects blood and ectoparasite samples, and then bands the birds before releasing them (reports on the capture of banded birds from other places in Europe will yield significant information about the migration patterns of the birds.) Information about the migratory patterns of the birds, plus an analysis of the blood samples and the parasites collected from the birds, has already provided significant information about the role of migrating birds in spreading diseases which can attack crops, animals, and man. The Rockefeller Virus Laboratories are collaborating with the Smithsonian on this project.

50. <u>Union College, Schenectady, New York</u>	Plankton Communities of the Nile River Delta
---	--

Assessing the impact of man's engineering undertakings upon the total environment is an urgent area for study. It is becoming clear that engineering studies alone cannot provide adequate information to governments for decisions about what will, in fact, increase the well being of the human population. Reduction of the flow of nutrients into the Mediterranean because they are trapped behind the Aswan Dam has all but eliminated the shrimp fisheries of the Nile Delta. This study proposes to monitor the changes in the coast line and in the amount of salt in previously-fished freshwater lakes in the delta resulting from the change in the Nile's flow.

U.S. Dollar Equivalent in Egyptian Pounds	FY 1975 est.	80,000
	FY 1974 est.	34,000

Institution Title of Project

51. University of Michigan,  
Ann Arbor, Michigan Systematic Studies of the  
Mollusk Genus Bulinus in  
Africa and Adjacent Regions

This project is a "systematic" study of one common genus of African snail, especially abundant in Egypt. As disease carriers, snails are animals whose biology and habits it is particularly important to understand. These studies will be coordinated with similar studies done by the University of Michigan's Museum of Zoology in other areas of the world such as India (see Item # 57 below). A biologist at the University of Cairo will directly collaborate with his Michigan colleagues on this study.

	FY 1973	10,000
	FY 1972	25,000
	FY 1971	35,000
	FY 1970	18,000
	FY 1969	3,000

57. <u>University of Michigan Ann Arbor, Michigan</u>	Cytological Studies of Indian Mollusks.
---	---

Studies are continuing in attempts to understand better and thus control snails (mollusks), animals known to carry diseases which attack man and his domesticated animals. The diseases include schistosomiasis, liver fluke and other worm parasites. These diseases are wide spread in the tropics and they have a way of spreading dramatically in an area where hydroelectric dams and irrigation canals are being built, disturbing the ecological balance. These studies employ the most modern techniques to understand the basic genetic materials of the cells of snails and thus to make it possible to tell one family of snails from another when they are from all outward appearances identical. These earlier studies are now to be continued in India, with the same team of scientists also planning to continue this work elsewhere, notably in Egypt (see item 51, above).

## Title of Project

58. Office of Environmental Sciences, Smithsonian Institution, Washington, D.C. Productivity of Tropical Lakes in South India.

This study of the way things grow in freshwater in the tropics is one of the many studies essential to an understanding of the ways man can prevent the pollution of productive bodies of water and develop them as a source of high protein food.

U.S. Dollar Equivalent in India Rupees	FY 1975 est.	10,000
	FY 1974 est.	10,000
	FY 1973	51,000

59. Yale University New Haven, Connecticut Habitat Relationships and Distribution of Wild Ungulates in the Gir Forest of India.

Study of the wilderness has a critical role to play in developing long-range guidelines for management of natural resources. By comparing studies of lands cultivated by man with those left to grow naturally, it is possible to learn what the land is capable of producing as opposed to what man asks the land to produce. Plans for the conservation of wilderness grow out of studies like those in the Gir Forest. This study of wild ungulates (hooved animals) in the Gir Forest is now completed, but Yale University plans to undertake studies concerned with other aspects of this important wildlife area in India.

	FY 1970	35,000

60. National Museum of Natural History, Smithsonian Institution, Washington, D.C. A Flora of the Hassan District, Mysore State, Ghat Mountains Southwest India.

Underlying all environmental studies on land must be thorough studies to identify accurately each form of plant life and the place of each form in the community of living things, the ecosystem, of which it is a part. This study in India is one such carefully controlled study of a limited area with a wide range of plant life resulting from rainfall which varies from less than 30 inches to somewhere between 100 and 300 inches per year. It is providing correctly identified specimens for the National Herbarium at the Smithsonian strengthening these collections with materials from the Eastern Hemisphere. This study will be completed during FY 1974. United States scientists, outstanding in the study of the tropics of our own hemisphere, are now undertaking comparative studies in other tropics, the essential next step in understanding the biology of this climatic zone.

65. <u>University of California</u> <u>Davis, California</u>	Ecology and Behavior of Hoolock Gibbons.
---	---

The gibbon is unique among man-like apes in that he mates for life. He also has a strict, one-family territorial social organization. It now seems possible that this animal can change his social organization when the necessities of life require it. Specifically, when the trees lose their leaves and cease to provide food, it is believed that the gibbon will form larger groups made up of several families in order to forage for food. If this belief can be verified, one of the missing links in the development of social organization from man's early primate ancestors to man's own communities of families will have been supplied.

73. <u>Office of Environmental Sciences, Smithsonian Institution, Washington, D.C.</u>	Development of a Manual for Oceanographic Sorting Center
--	--

Understanding life in the sea and how it can better serve mankind is still dependent on first finding out what is there. This work can be greatly accelerated by coordination and standardization of collecting and distributing specimens to the world's experts on marine plant and animal life. Oceanographic sorting centers have been established around the world to speed this study. A unanimous recommendation of the first international meeting of Directors of Oceanographic Sorting Centers, sponsored by the Smithsonian in May, 1972, in Tunisia was that manuals be developed in order to ensure world-wide standards. Represented at this meeting were Directors from India, Japan, Tunisia, Mexico, Canada, Germany, the United States and UNESCO. Indian scientists, UNESCO and the Smithsonian propose to prepare and publish these manuals.

75. Texas Tech University  
Lubbock, Texas

Anatomical and Ecological  
Study of the Indian  
Whistling Duck

In the face of habitat changes caused by human encroachment, some species of wildlife are able to adapt successfully while others have become extinct. Studies conducted by Texas Tech on the life cycle of whistling ducks in this country, as compared to anatomically nearly identical ducks in India, suggest that the Indian ducks have developed the ability to adapt to a more varied environment. Discovery of the reasons why a nearly identical bird species has different abilities to adapt may suggest ways in which an endangered species can be introduced and preserved in a different environment. This proposal would be conducted in conjunction with the Bombay National History Society.

Establishment of a Marine  
Sorting Center at Porto Novo

More information about the kinds and quantities of sea life is necessary if man is to utilize the full potential of the sea as a food resource. Marine Sorting Centers, organized to gather and share data about marine life, are in operation in a number of countries around the world. This proposal, bringing together the Smithsonian and the Department of Marine Biology at Annamalai University, would set up such a center at Porto Novo to gather data on sea life in the Bay of Bengal.

Lawrence, Kansas

Niche Ecology of the  
Garden Lizard in the Gir  
Forest, India

The Gir Wildlife Sanctuary, located in the Indian State of Gujerat and approximately 400 square miles in size, is the home of numerous species of wildlife. Modern wildlife preservation and management are dependent on an understanding of the relationships of the wildlife to the land available. Past studies of the Gir have included research on many of the mammal and bird species present as well as the vegetation. This study by the Bombay Natural History Society and the University of Kansas will provide data on one of the more numerous species present in the Gir but about which little is currently known, the garden lizard, *Calotes versicolor*.

## Institution

## Title of Project

78. Office of Environmental Sciences, Smithsonian Institution, Washington, D.C. Limnology of the Ganges River.

The Ganges is the major river system of north India, with headwaters reaching to the Himalayas in the north, and the central highlands in the south. The Ganges plain alone covers nearly a quarter of India's land area and is the home of some 135,000,000 people, all of whom are directly or indirectly dependent on the river waters for their livelihood. As with many of the major river systems around the world, water pollution is a major problem. Determining the causes and amounts of pollution will provide important data that will make possible effective pollution control programs. An important economic benefit resulting from cleaner waters would be an increase in fisheries, potentially a valuable food resource. German and American biologists would work closely with Indian scientists representing a number of Indian research institutes and universities in carrying out this project.

FY 1974 est. 4,000

85. National Museum of Natural History, Smithsonian Institution, Washington, D.C. Geological Oceanography in the Gulf of Cambay

As the population of the world continues to increase, more attention is being focused on the sea as a source of food. The Gulf of Cambay and the adjacent continental shelf, lying off the west coast of India, are subject to large deposits of river sediment during the monsoon season. The amount of sediment and where and at what rate it settles affects marine life. This study of sediment distribution during periods of heavy flooding, and the effects on marine life, particularly commercially valuable fishes, can have application for the United States where the east coast continental shelf has features similar to those of the continental shelf off the west coast of India.

---	--

88. <u>Bodega Bay Institute</u> <u>of Pollution Ecology</u> <u>Berkeley, California</u>	Establishment of a Pesticide Analytical Laboratory
---	--

The Smithsonian study of bird migration in India, which has been underway for several years, makes it possible to obtain several kinds of birds from different parts of that country for studies of the secondary effects of the use of pesticides. Laboratory analyses of tissue from these birds reveals whether dangerous levels of pesticides have been ingested by the birds which live off the pests which the pesticides are intended to control. Death of substantial numbers of birds from excessive ingestion of pesticides can mean elimination of a natural pest control mechanism often more important than man's chemicals in controlling crop damaging insects.

101. <u>Office of Environmental Sciences, Smithsonian Institution, Washington, D.C.</u>	Life Cycles of Fish Parasites in Tropical Lakes
---	---

Many species of fish, an important source of food, are found in tropical lakes. The size of the catch is often limited due to high attrition caused by fish parasites. An essential step in **the** life cycle of certain parasites occurs when infected fish are eaten by water birds. The parasites then develop in the host birds which later return them to the water where they infect fish and the cycle again begins. This project, sponsored by the Zoological Survey of Pakistan and the Smithsonian, would study the interrelationship of the parasites, birds and fish. Successful interruption of the parasites' life cycle would lead to an increase in fish production.

	FY 1973	25,000
	FY 1972	50,000

116. University of Arizona Tucson, Arizona Population Biology and Cytogenetics of Desert Mammals

In recent years, there has been an increasing awareness of man's natural environment and of the role played by plants and animals in the maintenance of that environment. This project, in cooperation with the Tunisian Association for the Protection of Nature and Environment, is studying desert mammals. A better understanding of the role played by mammals in a desert ecosystem can provide information required to maintain a productive balance of plant and animal life. It may also be possible to suggest under what condition desert areas could be utilized for crops or grazing.

U.S. Dollar Equivalent in Tunisian Dinars	FY 1975 est.	50,000
	FY 1974 est.	62,000
	FY 1973	56,000

## Institution

## Title of Project

117. University of Colorado,  
Boulder, Colorado Late Tertiary Biochronology  
of Mammalian Faunas in the  
Western Mediterranean Area

Much of what is known about the evolution and development of plants and animals has come from the study of fossils. Past research carried out in Tunisia by the University of Colorado has identified the fossil remains of large numbers of mammals and other vertebrates. The purpose of this study, in cooperation with Tunisian scientists, is to determine the age and chronological appearance of mammal species, based upon the known age of the rocks in which the fossils are located. Present evidence suggests that the age and diversity of Tunisian rock formations are such as to provide the key to understanding the evolution of mammals for all of North America.

U.S. Dollar Equivalent in Tunisian Dinars	FY 1975 est.	19,000
	FY 1974 est.	27,000
	FY 1973	37,000

118. University of Michigan  
Ann Arbor, Michigan Systematic Studies of  
African Mollusks

Snails are known carriers of diseases such as schistosomiasis and liver flukes which attack both man and domesticated animals. The University of Michigan has conducted extensive research on the biology and genetics of Indian snails and now proposes to conduct similar studies in North Africa. From this study, it is hoped to develop mechanisms for the control of snail populations based on utilization of the snails natural enemies, rather than with chemical pesticides which often have unwanted secondary effects in destroying birds and fish.

	FY 1971            51,000

120. <u>Office of Environmental</u> <u>Sciences, Smithsonian</u> <u>Institution, Washington,</u> <u>D.C.</u>	Cooperative Marine Research Aboard the Smithsonian Research Vessel R/V <u>Phykos</u>
---	--

Man's dependence on the seas for food and mineral resources is increasing as the world's population continues to grow. Oceanographic studies of a sea the size of the Mediterranean can provide useful information on the processes of life in all seas. Numerous U.S. research institutions and universities have indicated an interest in utilizing the Phykos as a research vessel in order to conduct research on such topics as: the shape and make-up of the sea floor and how this effects ocean currents; the collection and distribution of plankton, one-celled plants and animals that form the food-base of sea life; the distribution of man-made and natural pollutants and their affect on marine life; and the drilling of cores through the ocean floor to determine through studies of fossils the evolution and distribution of marine life. Because of the abrupt reduction of United States holdings of Yugoslav dinars, the Institution is seeking alternative sources of funding for the research cruises of the Phykos.

U.S. Dollar Equivalent in Yugoslav Dinars	FY 1973            30,000

X. MULTI-COUNTRY BIOLOGY PROJECTS

a. On-going and Pending Multi-Country Biology Projects

Institution	Title of Project
125. <u>U.S. National Committee for the International Biological Program, National Academy of Sciences, Washington, D.C.</u>	USIBP Training, Symposia, and Research Development in the 'Excess Currency' Countries

The International Biological Program seeks to promote the study of nature's productive process particularly by focussing talent and money on problems which can not readily be studied in any one nation. The U.S. contribution is a series of complex studies of entire climatic regions like temperate forests and grasslands or tropical forests or deserts. Studies initiated in the U.S. are of substantially greater value if they can be compared with carefully prepared parallel studies in other parts of the world. Smithsonian excess foreign currencies have contributed to the development of a number of such parallel studies.

	FY 1972	39,000
	FY 1971	24,000

127. University of Pennsylvania, Philadelphia, Pennsylvania Libyan Desert Glass Occurrence

Tektite, or natural "glass", occurs many places in the world, and theories vary whether the origin of this glass comes from impact, fusion at high temperatures, volcanic action, or even from an extraterrestrial source such as meteorites. In one of the most remote areas on the face of the earth--the region near the borders of Egypt, Libya, and the Sudan--tektites are strewn over a broad region. This project, in cooperation with the Egyptian Geological Survey, will pay one or several visits to the area, as needed, in an attempt to establish the nature and origin of this Libyan Desert "glass".

U.S. Dollar Equivalent in Egyptian Pounds	FY 1975 est.	50,000
	FY 1974	50,000
	FY 1972	71,000

128. American Research Center in Egypt, Princeton, New Jersey Medieval Islamic Astronomy A Study of Arabic Scientific Manuscripts in Cairo

Medieval Islamic studies of astronomy are especially important to today's student of the history of science. The Egyptian National Library in Cairo contains the world's largest collection of unstudied Arabic manuscripts relating to astronomy and mathematics and dating from the medieval period. A critical catalogue of these manuscripts and the scientific analysis of works of particular importance are the objectives of this study.

Design of a Mosaic Telescope

Nearly all observational astronomers feel a strong need for increased light-gathering power, which can be obtained by using larger telescopes. Very large telescopes are extremely expensive, however, and the problems of constructing large mirrors are immense. It is, therefore, proposed to experiment with designs for a telescope consisting of many small mirrors. This study, in cooperation with Allahabad University, will complement the studies being performed on the Smithsonian Astrophysical Observatory's Multiple-Mirror Telescope.

b. New Astrophysical and Earth Sciences Projects  
in India

Institution Title of Project

139. University of California  
San Diego, California The Effects on Cosmic Rays  
on Terrestrial and Extra-  
Terrestrial Materials.

In the atomic age, the effects of radioactivity have become well known. The rate at which radioactive materials change into inert, stable materials can be measured, and hence the amount of stable material in a given substance provides information about its age--how long it has taken the radioactive material to change into inert material at the known rate of change. This study aims to look at radiation effects in substances both from outside the earth's atmosphere (meteorites) and those recovered from the earth (geological and archeological specimens) in an effort to determine other effects of radiation. The kinds of analysis contemplated are similar to many of the studies which have been made of lunar samples brought back to the earth by the American astronauts.

Institution	Title of Project
150. <u>Center for Short-Lived Phenomena</u> <u>Smithsonian Institution</u> <u>Washington, D.C. and</u> <u>Cambridge, Massachusetts</u>	Excess Currency Support for the Center for Short-Lived Phenomena

The Center for Short-Lived Phenomena is a clearing house for the receipt and dissemination of information concerning rare or infrequent natural events that might otherwise go unobserved or uninvestigated; like remote volcanic eruptions, the birth of new islands in the ocean, the fall of meteorites, large fire balls, sudden changes in biological or ecological systems, and so on. With today's concern for the natural environment, the Center for Short-Lived Phenomena serves a need of the American scientific community, since it collects and disseminates information about natural events while they are happening and makes it possible in many cases for scientists to study them while they are happening. The utility of this is obvious in the case of phenomena such as erupting volcanoes, tidal waves, plagues of locusts, and similar occurrences which can have such a drastic impact on man and his environment. If the nature of some of these phenomena were better understood preventive or protective measures could be more readily applied.

167. Office of Exhibit Programs, Smithsonian Institution, Washington, D.C. "It All Depends", an animated film presenting basic ecological principles.

The Smithsonian Institution's Museum of Natural History has developed an exhibition called, "It All Depends: How Man Affects and is Affected By The Natural Environment". It deals with man as a member of a community that includes all living things. Emphasizing interdependence, the exhibition explores man's roles in the natural world and the environmental consequences of those roles. The exhibition will include two animated films entitled: 1) Predator and Prey; one animal's meat is another animal's population control; and 2) Foodwebs; energy is transmitted from one living thing to another. Film Polsky in Warsaw was chosen to produce the films because of the unique artistic and technological quality of its animated films.

U.S. Dollar Equivalent in Polish Zlotys                      FY 1973              16,000

168. Office of Exhibit Programs, Smithsonian Institution, Washington, D.C. "Power in Numbers", an animated film exploring the U.S. Census as a basic inventory of American life.

The Smithsonian's Museum of History and Technology is preparing a major new exhibit area devoted to the history of the democratic experience in America to be opened to the public in 1974. An important part of this exhibition will be devoted to showing how the U.S. Census plays a basic role in the democratic process as an indicator of the political power of America. Because the theme is not one which can be effectively presented simply through the display of objects, an animated film is being prepared by Film Polsky in Warsaw because of the unique artistic and Technological quality of its animated films. The script for the film was prepared by the Smithsonian.

U.S. Dollar Equivalent in Polish Zlotys                      FY 1973              36,000

169. National Museum of History and Technology, A Survey of Polish Textiles,  
Smithsonian Institution, Past and Present  
Washington, D.C.

Poland is today a center of innovation in textile design and it has a long tradition of fine textile manufacture. This museum exchange project is part of a larger study particularly of the introduction of the Jacquard loom, of the examination of pre- and post-Jacquard loom devices used for weaving complex patterned fabrics in Poland, and of the textiles produced on these looms with a view to preparation of an exhibition at the Smithsonian.

U.S. Dollar Equivalent in Polish Zlotys      FY 1974      3,000

170. Department of Cultural History, Smithsonian Institution, Washington, D.C.      Traditional Polish Musical Instruments

The Smithsonian's Department of Cultural History and the Museum of Musical Instruments in Poznan, Poland joined in the study and exchange of traditional folk musical instruments of Polish, American and American Indian origin.

b. New Museum Programs in Poland

Institution	Title of Project
171. <u>National Air and Space Museum, Smithsonian Institution, Washington, D.C.</u>	To Conduct an Exchange of Historic Aircraft and to Study the History of Flight in Poland
Aircraft of two World Wars and of civilian airlines of Eastern Europe are available for study and exchange in Poland. It is proposed to support the exchange of airframes and parts within the programs of the rapidly developing National Air and Space Museum.	
U.S. Dollar Equivalent in Polish Zlotys	FY 1975 5,000
172. <u>American Association of Museums, Washington, D.C.</u>	Historic Preservation Seminar
Since the Second World War, Poland has emerged as a leading country in the fields of restoration and preservation of important buildings and other monuments and sites, particularly with regard to the development of coordinated plans and public policy. For this reason, the American Association of Museums plans to hold a seminar in Poland for Americans with professional interests or public policy responsibilities in historic preservation for the purpose of furthering American efforts in the field.	
U.S. Dollar Equivalent in Polish Zlotys	FY 1975 30,000
173. <u>Institute of Advanced Study, Princeton, New Jersey</u>	Study of Medieval Scientific Manuscripts at Krakow, Poland
Krakow, Poland, was one of the centers of Central European scholarship in the sciences, particularly in astronomy during the late medieval period. This project would support the collaboration of an American scholar and historian of science with current Polish efforts at examining and interpreting manuscripts of the period.

VIII. Tunisia

a. On-going and Pending Museum Programs in Tunisia

Institution	Title of Project
174. <u>Office of Museum Programs,</u> <u>Smithsonian Institution,</u> <u>Washington, D.C.</u>	Publication of the Cultural Property Handbook of the International Council of Museums

The Smithsonian, the Brooklyn Museum, the International Council of Museums (ICOM), and the Tunisian National Committee for ICOM have joined to support compilation of a compendium of the cultural property laws of the nations of the world. The publication and worldwide distribution of this compendium will contribute to the control of illegal international trade in cultural objects and the development of similar national laws for this purpose. This publication will enable cultural property importing countries of the world to determine whether such property comes to them through legal channels. Cultural property exporting nations will have a basic reference for the promulgation or amendment of laws regulating international traffic in cultural property.

175. <u>Office of Museum Programs,</u> <u>Smithsonian Institution,</u> <u>Washington, D.C.</u>	Tunis Museum of Natural History
--	---------------------------------

The Smithsonian Foreign Currency Program has supported a number of major natural sciences projects in Tunisia, notably in marine biology, desert ecology, and geology. Resulting research collections have been deposited in Tunisia where a national museum of natural history is being organized. The Smithsonian is assisting the natural sciences agency, the Tunisian Association for the Protection of Nature and the Environment (TAPNE) in establishing this museum which will serve as a base for future scholarly exchanges between the United States and Tunisia.

X. MULTI-COUNTRY

a. On-Going and Pending Multi-country Museum Programs

Institution	Title of Project
176. <u>Division of Perform- ing Arts, Smithsonian Institution, Washington, D. C.</u>	A Study of Cultural Cognates and Living Museology

The Smithsonian Bicentennial Program proposes to present side-by-side on the Mall in Washington and in conjunction with Bicentennial Programs in interested states, practitioners of folk arts and crafts as they exist in the lands of our forefathers and as they survive in the homes and communities of America today. This program, "Old Ways in the New World", is carefully seeking out the grass-roots practitioners of folk traditions, comparing those of the land of origin with those surviving in this country, and publishing the results as anthropological studies of cultural change and as lively films and records for both students and folk art enthusiasts.

E. GRANT ADMINISTRATION

Institution	Title of Project
181. <u>Office of International Activities, Foreign Currency Program, Smithsonian Institution, Washington, D.C.</u>	To Defray Costs of Grant Administration Payable in Foreign Currencies

In order to administer a national program of grants for research which is entirely conducted overseas, there is an irreducible minimum amount of time which must be spent on the ground in the countries abroad by program personnel. The program endeavors to keep administrative costs to a minimum but some are unavoidable. Some of the costs shown represent dollar savings (for example, for audit), since if the work were not done abroad at a cost in foreign currencies, it would have to be done in the U.S. at dollar cost. Administrative costs have remained a small percentage of the total program appropriation. A breakdown of costs and estimated costs for Fiscal Years 1973, 1974. 1975 follows:

U.S. Dollar Equivalent in Egyptian Pounds	FY 1975 est.	2,000
	FY 1974 est.	2,000
	FY 1973	7,000
	FY 1972	2,000
U.S. Dollar Equivalent in Indian Rupees	FY 1975 est.	2,000
	FY 1974 est.	2,000
	FY 1973	17,000
	FY 1972	5,000
U.S. Dollar Equivalent in Pakistani Rupees	FY 1975 est.	2,000
	FY 1974 est.	2,000
U.S. Dollar Equivalent in Polish Zloties	FY 1975 est.	2,000
	FY 1974 est.	2,000
	FY 1973	3,000
U.S. Dollar Equivalent in Tunisian Dinars	FY 1975 est.	2,000
	FY 1974 est.	2,000
	FY 1973	13,000
	FY 1972	2,000
