Scolecophagus preoccupied.

Scolecophagus Swainson, 1831, commonly used for a genus of North American birds, is preoccupied by Scolecophagus Geoffroy, 1795. For the genus of birds known as Scolecophagus the term Euphagus may be employed. The latter was used by Cassin in 1866 (Proc. Acad. Nat. Sci. Phila., 1866, p. 413) for Psarocolius cyanocephalus Wagler. The two species will thus stand as: Euphagus carolinus (Müller), and Euphagus cyanocephalus (Wagler).—Charles W. Richmond.

On the name Eniconetta.

Polysticta Eyton, 1836, as the generic name for Steller's Duck, has long since been rejected in favor of Eniconetta Gray, 1840, because of an alleged earlier Polysticte Smith, 1836 (sometimes erroneously quoted "1835"). It can be said, however, that Eyton's Polysticta was published in April, 1836 (Catal. Brit. Birds, p. 58), while Smith's Polysticte appeared not earlier than June (Smith consistently quotes it "June, 1836" in his Illustrations of South African Zoology), and possibly even later. Smith did not return from his expedition into the interior of South Africa until the middle of March, 1836, after which he prepared his "Report of the Expedition for Exploring Central Africa," published at Cape Town. The date cited by Smith may mean that of the completion of his MS. In any event Eyton's name Polysticta is prior to Polysticte Smith, and should be used for Anas stelleri Pallas.—Charles W. Richmond.
