NEWFOUNDLAND FISHING SEASONS.

SALMON, TROUT, AND EELS.

The following notes from the returns of 1897 of the Board of Conservators of the Dart Fishery District, as entered in the register of the St. John’s Harbour and Islands, mention, and know very little of their habits and habits...

Black Bass in Ponds.

The Dart is an entirely freshwater river, and we have found the full-grown bass much more common in the upper reaches than in the lower. Bass were seldom caught in the St. John’s Harbour during the summer months, but during the fall they were abundant in the lower part of the river. The bass are largest near the mouths of the tributary rivers, but they occur in considerable numbers throughout the length of the Dart.

The anglers who fish in the Dart for bass are usually those who live near the river, and are therefore able to get to the river before the other anglers. The bass are most abundant in the upper part of the river, and are seldom caught below the mouth of the river. The best time to fish for bass is in the fall, when they are running up to spawn.

The bass are usually caught on the fly, but sometimes on the dry fly. The best flies for bass are the salmon fly, the mayfly, and the damselfly. The best times to fish for bass are in the fall, when they are running up to spawn, and in the spring, when they are running down to feed.

Our experiments have shown that the best time to fish for bass is in the fall, when they are running up to spawn. The best flies for bass are the salmon fly, the mayfly, and the damselfly. The best times to fish for bass are in the fall, when they are running up to spawn, and in the spring, when they are running down to feed.

These bass are usually caught on the fly, but sometimes on the dry fly. The best flies for bass are the salmon fly, the mayfly, and the damselfly. The best times to fish for bass are in the fall, when they are running up to spawn, and in the spring, when they are running down to feed.
