SMITHSONIAN
HERPETOLOGICAL
INFORMATION
SERVICE

The SHIS series publishes and distributes translations, bibliographies, indices, and similar items judged useful to individuals interested in the biology of amphibians and reptiles, but unlikely to be published in the normal technical journals. Single copies are distributed free to interested individuals. Libraries, herpetological associations, and research laboratories are invited to exchange their publications with us.

We wish to encourage individuals to share their bibliographies, translations, etc. with other herpetologists through the SHIS series. If you have such items please contact George Zug for instructions. Contributors receive 50 free copies.

Please address all requests for copies and inquiries to George Zug, Division of Amphibians and Reptiles, National Museum of Natural History, Smithsonian Institution, Washington, D.C. 20560, U.S.A. Please include a self-addressed mailing label with requests.

Introduction

The literature on the herpetofauna of Florida is, as expected, rather diverse and widely scattered. This is due to the large number of species of amphibians and reptiles within the state and to the many herpetologists, both professional and amateur, who have studied its many endemic species, subspecies, and unique phenotypes, and published their findings in short notes and long books. Few states can match its biotic diversity, yet increasing human population is leading to more and more habitat alteration and fragmentation, thus jeopardizing crucial habitats and the species that depend upon them.

In order to assist biologists and others who are interested in and concerned about Florida's amphibians and reptiles, we have assembled this bibliography. We have included standard scientific references, popular articles, theses and dissertations, and much of the so-called "gray" literature dealing with contracted but often unpublished government and privately funded research. Our hope is that by making these references available in a single source, future research and conservation activities will be facilitated.

We would like to thank James N. Stuart, who started the project to assemble these references, and the following individuals who provided additional information: Ray Ashton, David Auth, John Iverson, Dale Jackson, Howard Kochman, Julian Lee, D. Bruce Means, Paul Moler, Henry Mushinsky, Paul Raymond, and Richard Seigel. We especially thank Luana Whitehead for typing the initial drafts of the manuscript, and Anita Brand for typing the many revisions.
