## **SERIES PUBLICATIONS OF THE SMITHSONIAN INSTITUTION**

Emphasis upon publication as a means of “diffusing knowledge” was expressed by the first Secretary of the Smithsonian. In his formal plan for the Institution, Joseph Henry outlined a program that included the following statement: “It is proposed to publish a series of reports, giving an account of the new discoveries in science, and of the changes made from year to year in all branches of knowledge.” This theme of basic research has been adhered to through the years by thousands of titles issued in series publications under the Smithsonian imprint, commencing with Smithsonian Contributions to Knowledge in 1848 and continuing with the following active series:

Smithsonian Contributions to Anthropology  
Smithsonian Contributions to Botany  
Smithsonian Contributions to History and Technology  
Smithsonian Contributions to the Marine Sciences  
Smithsonian Contributions to Museum Conservation  
Smithsonian Contributions to Paleobiology  
Smithsonian Contributions to Zoology

In these series, the Institution publishes small papers and full-scale monographs that report on the research and collections of its various museums and bureaus. The Smithsonian Contributions Series are distributed via mailing lists to libraries, universities, and similar institutions throughout the world.

Manuscripts submitted for series publication are received by the Smithsonian Institution Scholarly Press from authors with direct affiliation with the various Smithsonian museums or bureaus and are subject to peer review and review for compliance with manuscript preparation guidelines. General requirements for manuscript preparation are on the inside back cover of printed volumes. For detailed submissions requirements and to review our manuscript preparation and style guides for authors, visit the Submissions page at [www.scholarlypress.si.edu](http://www.scholarlypress.si.edu).

## ABSTRACT

Janssen, Barbara Suit. Patent Models Index: Guide to the Collection of the National Museum of American History, Smithsonian Institution – Volume 2, Listings by Inventor and Inventor's Country of Residence. *Smithsonian Contributions to History and Technology*, number 54, xviii + 359 pages, 80 figures, 2010. — This two-volume catalog consists of four indexes providing information on more than ten thousand patent models housed throughout the National Museum of American History's collections. These nineteenth century artifacts are the original models submitted to the United States Patent Office by their inventors.

In Volume 1, the *Listing by Patent Number* sorts the NMAH patent models chronologically by the issued patent number. The *Listing by Invention Name* organizes the patent models alphabetically by the name of the invention.

In Volume 2, the *Listing by Inventor* organizes the NMAH patent models alphabetically by the inventor's last name. The *Listing by Residence* sorts the patent models by residence of the inventor at the time of patent issue by country, state, and city.

The patent number is a unique number that ties all of the indexes together. Issued by the Patent Office at the granting of a patent, the number links the model to its patent specification. The terminology used is consistent with the *Subject-Matter Index of Patents for Inventions Issued by the United States Patent Office from 1790 to 1873*, compiled by Mortimer D. Leggett, Commissioner of Patents in 1874.

*Cover images, from left to right:* Patent No. 6,469, Abraham Lincoln, Buoyant Air Chambers for Vessels, May 22, 1849 (SI neg. 86-6162); Patent No. 177,462, Ferdinand Braun, Combination Bed and Lounge, May 16, 1876 (SI neg. 83-5801); Patent No. 22,148, James Perry, Sewing Machine, November 23, 1858 (SI neg. 2005-36131). Photographs by Richard Strauss and Harold Dorwin.

# Introduction

---

The *Patent Models Index* consists of four lists of information relating to patent models, each containing different information and sorted by a different key detail: patent number, invention name, inventor, and residence of inventor. Nowhere else does there exist such a record of the patent model collections of the Smithsonian Institution's National Museum of American History (NMAH) in an organized and comprehensive manner. The priorities of the Smithsonian Institution Scholarly Press (SISP) are to diffuse the information relevant to NMAH collections and to offer a searchable tool from which end users will benefit. Within the framework of existing processes, SISP has published this set of indexes and makes it available online to all users as a fully searchable PDF.

The purpose of this index is specifically to document the collection of patent models in NMAH. A small number of patent models are in the collections of other Smithsonian museums. Those of the Anacostia Community Museum, the National Postal Museum, and the National Air and Space Museum are not included in this index. The index was not intended to address every question that might be of interest to historians of technology or the patent system, but rather to expose them to the breadth and depth of the NMAH collections. All of the listings include different fields, so their value varies. For example, in the listing by residence of inventor users may compare inventions by country, state, and city. The listing by inventor includes a field for multiple patentees, which is not included in the others. The listing by invention name groups models by name so users might realize the scope of any one set of models within a particular subject matter. All of the indexes include unique fields, with only major fields, such as invention name and patent number, being repeated. Just like Leggett's 1874 three volume patent index, the *Patent Models Index* provides the foundation on which others might build.

## THE PURPOSE OF PATENT MODELS

For most of the nineteenth century, the Patent Office required inventors to submit a model with their patent application. Inventors placed great importance on their models and viewed a well-executed model as the key element in obtaining a patent. The inventor would often hire a professional model maker to turn a two-dimensional paper drawing into a three-dimensional miniature machine. The inventor might also turn to other skilled craftsmen, such as blacksmiths, watchmakers, or cabinetmakers, to fabricate models. Some inventors would construct their own models.

How a model was constructed depended mostly on what the patented feature was. The inventor had a choice of showing the complete machine or only his patented device. Models could be fine miniatures of their commercial counterparts (like printing presses or plows) or they could be the actual manufactured machine (like sewing machines or firearms) with the patented feature added. While it was not essential that the model work, many of them did. In general, the models tended to adhere to requirements of the Patent Office that they not exceed one foot in any dimension. Some inventors took great care to ensure their models were neither too small to be seen on the cabinet shelves in the Patent Office Model Room nor too large to fit there.

Model makers advertised their services in scientific and mechanical journals and city directories. Many model makers set up shop in Washington, D.C. to be near the Patent Office. “A Model, Model Shop,” W. D. Doremus’s advertisement in *The Inventive Age*, December 30, 1890. (SI neg. 86-928)

In the second half of the nineteenth century, the U.S. Patent Office Model Room and its four halls showcasing thousands of models was of common interest for researchers as well as a popular destination for inventors, the curious public, and manufacturers seeking helpful mechanical inventions. To the inventor, the idea of investors and manufacturers studying his or her patent model offered great incentive to craft a striking, handsome model that would stand out on the crowded Model Room shelves. Stereoviews of the Patent Office Halls of seemingly endless rows of cabinets filled with models were a popular Washington, D.C., photographic souvenir. Viewed through a stereoscope, the double images were dizzyingly dimensional. In 1855 Alfred Hunter published a guide to the Patent Office Model Room, *A Catalogue Showing the Location of Every Model of Patented Inventions in the New Hall of the Patent Office*. In 1874 Charles H. Fisher compiled a small pamphlet titled *Directory of the Model Room U.S. Patent Office, Alphabetically Arranged*, with Morse’s “Original Telegraph” and Elias Howe’s “Original Sewing Machine” on the cover, both of which are currently in the NMAH collections. Fisher’s directory covered the classes of invention in a mere eight pages, starting with “Acids, Manufacture of . . .” to “Artificial Limbs, Bridges, Coffins, Dental, Electrical Apparatus, Fishing, Governors, Harvesters, Ice Boats, Jewelry, Knitting Machines, Laundry, Meters, Needles and Pins, Ordnance, Photography, Refrigerators, Steam Engines, Traps, Umbrellas, Valves, and . . .,” and finishing with “Writing Apps. for the Blind.” Fisher concluded his guide with a listing of the four halls of the Model Room, including length and width of each, the number of exhibition cases in each, and the number of classes of invention within the cases. Joseph West Moore, in his 1884 guide book *Picturesque Washington: Pen and Pencil Sketches*, wrote:

The Museum of Models is contained in four lofty, magnificent halls, extending throughout the second story of the department building [the Patent Office]. Here are to be seen 300,000 models of patented articles, arranged in classes and subdivisions, and filling hundreds of spacious cases, all properly labeled and indexed. By means of these models one can trace the progress of every line of industry, from crude designs to the perfected machine, wonderful in construction and almost human in action. Here is the result of the profound study of countless

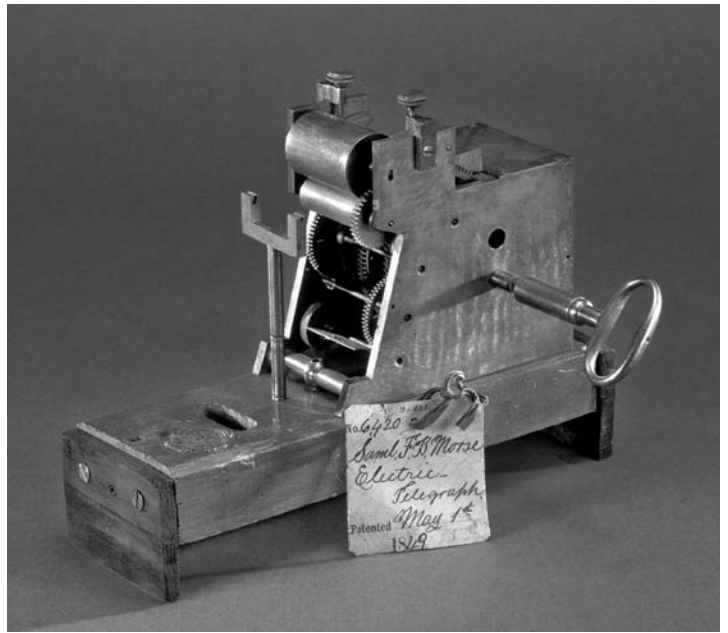

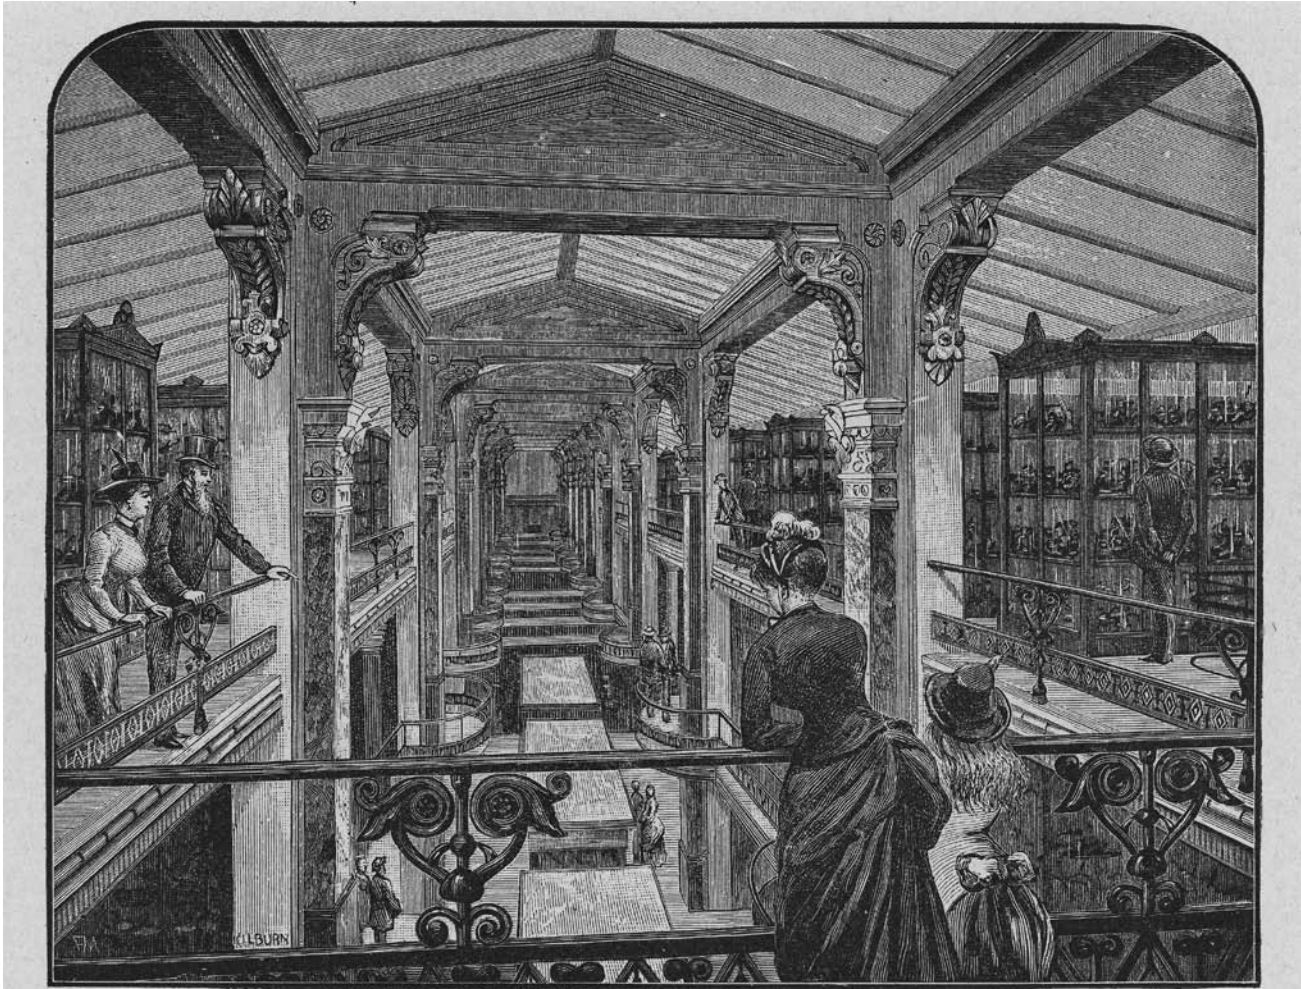

Stereoview of the South Hall of the Patent Office. Rows of cases containing patent models fill the Hall. Stamped on back: "T. W. Smillie, Photographer. Smithsonian Institution. Washington, D.C." About 1870–80. (SI neg. 2009-1830)

Patent No. 4,750. Elias Howe, Jr. Sewing Machine. September 10, 1846. (SI neg. 90-4210)

Patent No. 6,420. Samuel F. B. Morse. Electric Telegraph. May 1, 1849. (SI neg. 89-6904)

men diligently working in all the industrial fields through many years, and it is a marvelous exhibition of human capability, and can be inspected for hours, even days, with plentiful profit and enjoyment.”

### THE ORIGIN OF NMAH'S COLLECTIONS

In 1880 the Patent Office dropped the requirement for submitting models, except in unusual circumstances. This action was taken primarily because the Patent Office had simply run out of space in which to store or display an ever-rising flood of models. It was also true that inventions were becoming more complex and less amenable to representation by models. Once the requirement for submission of a model was rescinded, a decline in the large number of professional model makers in Washington, D.C., was inevitable. After 1893, public interest in the Model Room declined as other museums became popular. The patent models in the Model Room were crated and moved off site for storage.

Before the Smithsonian Institution acquired the model collection from the Patent Office, the models had suffered through two major fires at the Patent Office. The first, in 1836, destroyed all the models that had been submitted up to that date

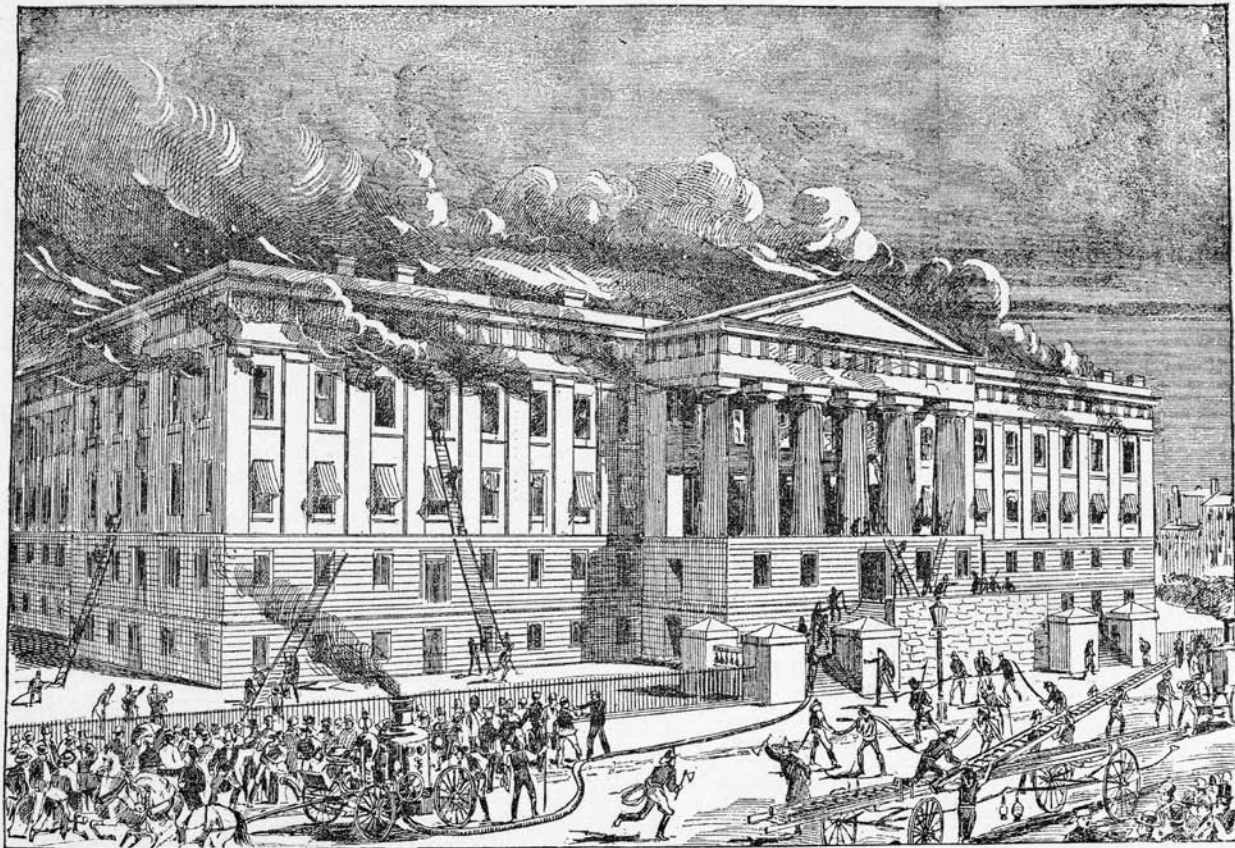

Dr. Frederick Lewton, Curator of Textiles, places Allen B. Wilson's sewing machine patent model on exhibition (c. 1934). He was responsible for selecting the main group of patent models from the Patent Office in 1926. (SI neg. 76-8985)

(approximately 7,000). Not only were all the models lost, but all of the patent drawings and records of patent applications and grants were also destroyed. These records were irreplaceable, and the U.S. Congress considered the loss so great that \$100,000 was appropriated to restore the drawings and the most important models. The Patent Office conferred with inventors when and where possible to ensure an accurate reproduction of each invention. This restoration program continued until 1849, by which time several thousand drawings and models had been restored. Prior to the 1836 Patent Office fire, patents had not been numbered. After the 1836 fire, patent models began to be numbered consecutively. Restored patents were given a series of new numbers called the "x-series." A second fire in 1877 destroyed 75,000 models out of a collection of 200,000.

In 1908 the NMAH patent model collection started with acquisition of 284 models from the Patent Office. The United States National Museum's Department of Anthropology, Division of Technology originally accessioned this collection of models and sent the museum's wagon to pick up the models from the Patent Office in June 1908. The particular strengths of this selection were firearms, with other smaller categories including printing presses, sewing machines, scales, typewriters, telegraphs, electric lamps, time locks, locomotives, gas and steam engines, agricultural implements, and textile machinery. Before the summer ended, curators made further selections for photography, musical instruments, lighting and heating, firearms and mechanical devices, bringing the total to just over 1,000.

The Patent Office packed the remaining models into more than 3,000 crates and moved them several times. In 1926 Congress decided to dispense with the Patent Office's stored collection of patent models. The subsequent bill gave the Smithsonian Institution first choice of the models. The Secretary of the Smithsonian, Charles Doolittle Walcott, appointed two curators, Frederick Lewton and Carl Mitman, to select the historically important models. Mitman chose models

THE GREAT PATENT OFFICE FIRE, SEPTEMBER 24, 1877.

SCENE DURING THE HEIGHT OF THE CONFLAGRATION.

In 1877 another fire in the Patent Office destroyed about 75,000 models. Illustration from *Curiosities of the U.S. Patent Office* by William Chandler Raymond, 1888. (SI neg. 83-14629)

specifically for the mechanical engineering collection. Lewton selected a broad range of models—his area of specialty was textile machinery and, in particular, sewing machines.

In the museum accession record for this large selection of models (accession number 89797), Lewton wrote in a memorandum dated July 19, 1926: “Of the approximately 155,000 models examined by the commission appointed to dispose of them, something over 3,000 were brought to the National Museum for preservation. The rest were turned over to the Bureau of Supply, Treasury Department, for sale as useless Government property. The Bureau of Supply has held four sales and practically all the models have been disposed of by auction.” Later Lewton would contradict himself in his autobiography, “I examined 352,000 models selecting about 15,000 for preservation, which were taken to the National Museum for study and recording.” Unfortunately, there was no overall list made at the time of accession that detailed the individual patent models collected.

The National Museum gave away an unknown number of models to schools, universities, other museums, and industry, and to descendants of inventors. The U.S. government sold the models that remained in the Patent Office collection to private parties. Today, patent models continue to attract buyers and collectors, and are often for sale on eBay.

At present the condition of patent models in the NMAH collections varies greatly. There are many fine models in excellent shape, and many other models that are in need of conservation before they can be exhibited. Some models bear tags that

say “removed from the debris of the 1877 fire.” On a scale of poor to excellent, most of the models fall somewhere in the middle. Curators at the Smithsonian hope that a conservation program will be funded to conserve the models in the future.

The fame and success of inventions such as Eli Whitney’s cotton gin and Elias Howe’s sewing machine spurred Americans to patent almost everything imaginable. This mania for patenting is illustrated in the NMAH patent model collection by its diversity and number of models. This profusion of patent models testifies to the enthusiasm of Americans to conceive a better idea, create an improved machine, and efficiently mechanize America from the home to the farm to the factory. During the nineteenth century, the patent models were proudly exhibited as icons of American invention. In the twenty-first century, the models remain in storage as “mute stones,” waiting to be rediscovered by individuals and scholars in search of the inventive wonders of an earlier era.

## **PATENT SPECIFICATIONS**

From its beginnings, American patent law followed the English tradition of requiring the submission of a written description of ideas for patent as well as drawings. Such a paper submission was referred to as a “patent specification.” The specification included a detailed description of the patent claims and a drawing of the invention. Information in the specification included the patent number, invention title, date the patent was granted, name and residence of the inventor(s). In the written specification, the inventor explained the general nature of his or her invention or improvement and ended with detailed patent claims. The text would refer to numbered figures and lettered details in the drawing. Often the patent model drawing was made directly from the model and provided an illustration of a moment of inspiration fixed in time and space. The drawings created a “still life” of invention.

Following is a typical example of a United States Patent Office patent specification with the accompanying patent drawing and model. The photograph pictures the clothes pin patent model that the inventor, Henry Mellish, submitted to the U.S. Patent Office in 1871. The requirement for a model was a uniquely American prerequisite for receiving a patent in the nineteenth century.

## **PATENT MODEL DATABASE PROJECT**

The NMAH holds several collections of patent models, housed within different divisions at the museum. The Patent Model Database is a repository of information about these collections of over 10,000 patent models identified to date. It includes such simple devices as clothespins and more complex machines like printing presses and the then-new nineteenth-century technology of electricity. The models in the database range in date from 1836 into the early twentieth century. The database was designed as a research tool and is published now as a guide to the collections. Individual division catalog cards, collection lists, and museum accession records were used as original sources of data. There has never been one list for all of the patent models or even for each division’s collection. These paper records are imperfect. Missing Patent Office tags meant that authoritative identification was not possible. In the future, more models may be identified in the vast holdings of NMAH, as well as new accessions added to the collections.

The available patent model information was entered into a Microsoft Access database and drafts of the patent model printouts were verified by division staff. The information about each patent model was confirmed by comparing the divisional information to the data in the patent specification. Additional information from the patent specification was added to the database and inaccurate data was corrected.

Often the original patent tag was tied to the model with the official red tape of the Patent Office. Penned in ink, the tags identify the inventor and coinventors (if any), the invention name, the patent date, and the issued patent number. The patent number links the model to its corresponding patent specification and drawing.

The inventor’s written specification explained the patented claims and matched the model’s features to the drawing of the invention. The patent specification provided provenance for the inventor’s name, including names of coinventors, the date of patent issue, and the residence of the inventor at the time of the patent issue. Nomenclature for the name of the invention also came from the specification. Sometimes the wording of the invention title would vary from the drawing to the written specification. In those cases, the description with the clearest meaning was used. For instance, the specification for

119,938

# UNITED STATES PATENT OFFICE.

HENRY MELLISH, OF WALPOLE, NEW HAMPSHIRE.

## IMPROVEMENT IN CLOTHES-PINS.

Specification forming part of Letters Patent No. 119,938, dated October 17, 1871.

*To all whom it may concern:*

Be it known that I, HENRY MELLISH, of Walpole, in the county of Cheshire and State of New Hampshire, have invented certain Improvements in Clothes-Pins, of which the following is a specification:

The nature of my invention relates to the construction of a bifurcated clothes-pin in such form that the act of placing it on the line will cause the points of the prongs to approach nearer to each other, and their inner surfaces near the body of the pin to spread further apart. The object of the invention is to produce a pin that shall be light and convenient to carry in the pocket; one that shall be easily put on and taken off the clothes-line; and one that shall always hold the clothes firmly to the line, notwithstanding any blowing about by the wind; and, finally, a pin that can be made and sold at a lower price than any pin heretofore in use.

Figure 1 is a side elevation of the pin. Fig. 2 is a side elevation with a cross-section of the clothes-line between its prongs, showing the extended position of the prongs when on the line. Fig. 3 is a perspective view of the pin.

Fig. 1 shows the shape of the pin, which should be made of straight-grained springy timber by cutting the slit A, between the prongs and the

openings B, through the prongs at right angles to the plane surfaces of the timber, which should be of suitable dimensions out of which to construct a pin in the form and about the size represented in the figures or drawing, although the size or proportions may be varied to suit the purpose to which the pin is to be applied. The openings A and B are connected with each other by dividing the inside bars *c* of the prongs from their attachment to the body of the pin at D, as represented in Fig. 1, for the purpose of allowing the ends of the bars to be spread apart, and, by their action upon the spring portions E of the prongs, to cause their ends to approach each other when placed upon the line, as represented in Fig. 2, so that the pin shall move on instead of off by movement of the clothes.

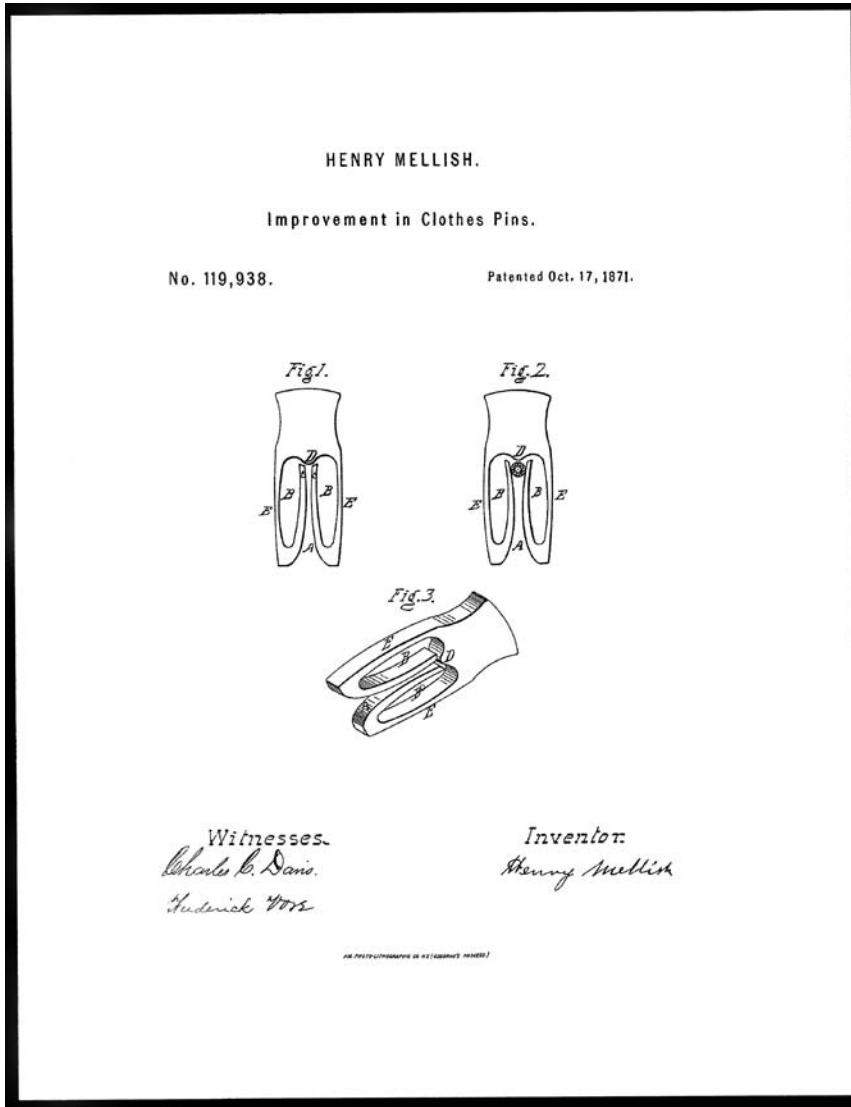

I claim—

The prongs of a clothes-pin when consisting of the springs E E in connection with the spring-bars C C, with the elliptical openings B B through them, and the ends of the spring-bars C C separated at the point D from the body of the pin, substantially as and for the purpose hereinbefore set forth.

Witnesses: HENRY MELLISH.

FREDERICK VOSE,  
CHARLES C. DAVIS.

(91)

Patent No. 119,938. Henry Mellish. Clothes Pin. October 17, 1871. (SI neg. 2005-37597)

Mellish's Patent Drawing for his Clothes Pin, Patent No. 119,938. (SI neg. 2009-1831)

John A. Roebling's patent no. 6082 is titled "Improvement in Tops for Wire Ropes," and the drawing titles it "Wire Rope Machine." The resulting choice, "Rope Making Machine, Wire," was selected for publication. Careful thought was given to the order of the terms within the name of an invention to provide for standardized searching by invention. Terminology used was consistent with the nineteenth-century Patent Office nomenclature.

The patent number for each model is unique and becomes the primary key to each patent model record. The uniqueness of the patent numbering system is fortunate as NMAH's catalog numbers include many problematic combinations of numbers and letters and, in a few cases, duplicate numbers. Searches on the database can be done by invention name, inventor, date, patent number (which is chronological), and country, state, and city, and by any combination of sorts. Using the database, it is now possible to answer inquiries across the entire collection. For example, what models are from Pennsylvania, or just Philadelphia? How many of Thomas Edison's patent models are in the collection? Are there patent models for cameras in the collections? This catalog provides a straightforward reference to answer these kinds of questions. In Volume 1, the patent model listings are by patent number and invention name. In Volume 2, the information is available by inventor and residence of inventor.

---

Patent No. 202, 586. William G. Rhoads. Flushing Box for Water Closets. April 16, 1878. (SI neg. 86-6556)

---

This index includes only utility patent models. Not included are a small number of early x-series, design and reissue patent models that use a separate lettered numbering system.

### **KEY TO NMAH DIVISIONS WITH PATENT MODEL COLLECTIONS**

The patent model collections found their present home in 1964 with the opening of the National Museum of History and Technology (now the National Museum of American History). In this index's listing by patent number, the name of the NMAH division that originally housed a patent model is provided. These division names are contemporary to cataloging the models, but like all changing and growing institutions, the collecting divisions of NMAH have been reorganized and renamed over time. The current division names at NMAH, reflecting current collecting interests, are listed below, and the corresponding former division names—found in the listing by patent number—are identified.

**Division of Music, Sports, and Entertainment**

Description: Contains the models pertaining to musical instruments, sports, and recreation.  
 Former divisions: Community Life  
 Musical Instruments

**Division of Information Technology and Communications**

Description: Incorporates the patent model collections of electricity, graphic arts, mathematics, and photography.  
 Former divisions: Electricity  
 Graphic Arts  
 Mathematics  
 Photographic History

**Division of Home and Community Life**

Description: Consists of the patent model collections concerning ceramics and glass, costume, domestic life, furniture, lighting, and textiles.  
 Former divisions: Ceramics and Glass  
 Costume  
 Domestic Life  
 Textiles

**Division of Work and Industry**

Description: Consolidates the former collections of agriculture, natural resources, mechanical and civil engineering, mechanisms, extractive industries, and transportation.  
 Former divisions: Extractive Industries (included agriculture and natural resources)  
 Mechanical and Civil Engineering  
 Mechanisms  
 Transportation

**Division of Medicine and Science**

Description: Includes patent model collections of medical sciences and physical sciences. The collection of medical sciences includes models relating to dentistry, surgery, pharmacy, medicine, and health. The physical science collection contains models for surveying, weighing, and navigation.  
 Former divisions: Medical Science  
 Physical Sciences

**Division of Military History and Diplomacy**

Description: Concerns the collection of military technology.  
 Former division: Armed Forces History

**Division of Politics and Reform**

Description: Houses the sole patent model of Abraham Lincoln's river boat buoyancy model.  
 Former division: Political History

# Acknowledgments

---

I am grateful to colleagues, past and present, who cared for and shared their knowledge of their patent model collections. Many museum specialists and curators of the National Museum of American History (NMAH) helped with the verification of the patent models in their collections. In the Division of Music, Sports and Entertainment, Ellen Hughes and Gary Sturm provided information about models pertaining to musical instruments, sports, and recreation. Assistance for the models in the Division of Information Technology and Communications was given by Joan Boudreau, Nance Briscoe, Barney Finn, Elizabeth Harris, Ray Hutt, Peggy Kidwell, Shannon Perich, Jim Spears, and Hal Wallace. This Division incorporates the patent model collections of electricity, graphic arts, mathematics, and photography. Information concerning the patent models in the Division of Home and Community Life was provided by Rita Adrosko, Reggie Blaszczyk, Doris Bowman, Bonnie Campbell Lilienfeld, Shelly Foote, Anne Golovin, Rodris Roth, Anne Serio, Jennifer Strobel, and William Yeingst. This Division consists of the patent model collections concerning ceramics and glass, costume, domestic life, furniture, lighting, and textiles. Information on the models in the Division of Work and Industry was provided by Michael Harrison, Francis Gadson, Paul Johnston, Terry Sharrer, David Shayt, Carlene Stephens, Susan Tolbert, Bob Walther, John White, Roger White, William Worthington, and Kay Youngflesh. This division consolidates the former collections of agriculture, natural resources, mechanical and civil engineering, mechanisms, extractive industries, and transportation. For the Division of Medicine and Science, Judy Chelnick, Jon Eklund, Michael Harris, George Norton, Ann Seeger, Deborah Warner, and Diane Wendt provided information on the patent model collections of medical sciences and physical sciences. Information on the military technology patent models in the Division of Military and Diplomacy was provided by Harry Hunter, David Miller, and Sarah Rittgers. In the Division of Politics and Reform, Harry Rubenstein confirmed the existence of the sole patent model of Abraham Lincoln's river boat buoyancy model.

Photographs of the models were taken by Richard Strauss, Hugh Talman, Eric Long, Laurie Minor, Jeff Tinsley, and Harold Dorwin. Michael Barnes and John Dillaber provided scans of photographs for this publication. Nancy Brooks furnished editorial assistance. Accession files from Collection Records were copied by Nan Card. Ginger Strader, Meredith McQuoid-Greason, and Deborah Stultz of Smithsonian Institution Scholarly Press managed the many details involved in the production of the publication.

I particularly wish to thank Rita Adrosko, Curator Emeritus of the Division of Textiles, Douglas Evelyn, former Deputy Director of the National Museum of American History, and Kendall J. Dood, former U.S. Patent Office Classifier, for their support and advice. The Ruth and Vernon Taylor Foundation deserves special thanks for providing funding for the Patent Model Database Project upon which this index is based.

I am grateful to my husband, Theodore Jon Janssen, for his belief in the importance of this patent model project. Computer wizard, problem solver, and first editor of endless patent lists, his considerable talents enabled the database to evolve into this index.

# Guide to the Listing by Inventor

---

The *Listing by Inventor* organizes NMAH patent models alphabetically by inventor's last name. When there are inventors with the same last name, the next sort is alphabetically by first name. Within similar first names a third level sort is by patent number. The last names of any coinventors are included, as well as the invention name.

Within the listings, a dagger (†) next to the patent number indicates that a photograph of the model is included in Volume 1; two daggers (††) indicate a photo is in Volume 2. See the Appendix for a complete list of all illustrations in the present volume.

Patent No. 490. Charles R. Harvey. Hair Cloth Loom. November 25, 1837. (SI neg. 80-16793)

---

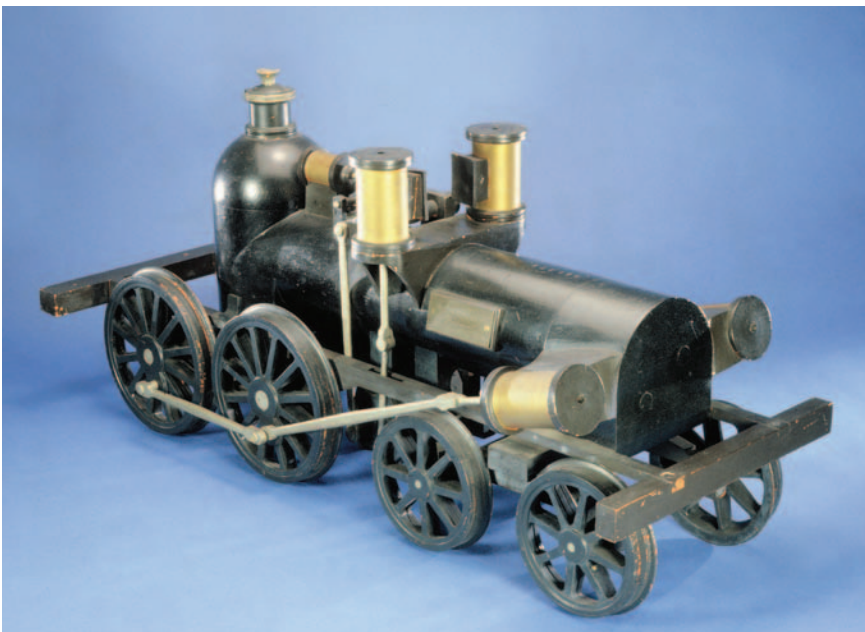

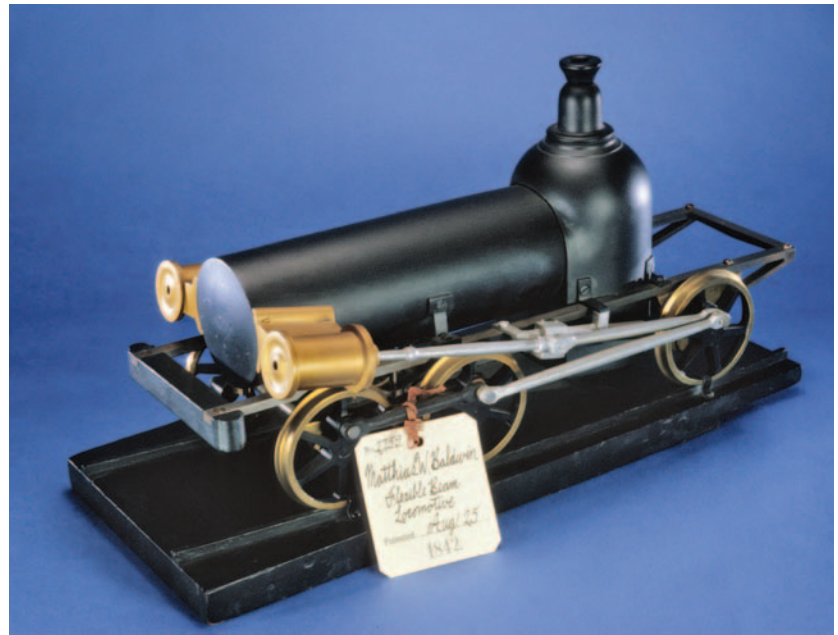

Patent No. 2,489. John H. Coburn.  
Loom Shuttle. March 12, 1842. (SI neg.  
83-14922)

---

---

Patent No. 2,759. Matthias W. Baldwin. Locomotive.  
August 25, 1842. (SI neg. 89-6732)

---

---

Patent No. 6,818. Andrew Cathcart. Locomotive.  
October 23, 1849. (SI neg. 89-6723)

---

From left to right: Patent No. 9,257. Samuel Aldrick. Clothes Pin. September 14, 1852. Patent No. 20,364. Dexter Pierce. Clothes Pin. May 25, 1858. Patent No. 60,627. T. L. Goble. Clothes Pin. December 18, 1866. Patent No. 119,938. Henry Mellish. Clothes Pin. October 17, 1871. Patent No. 365,755. Solon Moore. Clothes Pin. June 28, 1887. (SI neg. 2005-37591)

---

Patent No. 60,627. T. L. Goble. Clothes Pin. December 18, 1866. (SI neg. 2005-37593)

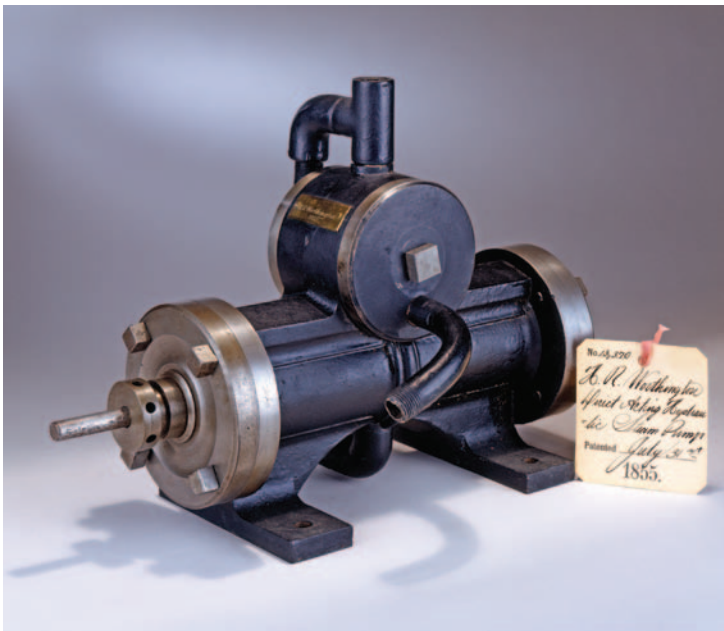

---

Patent No. 10,769. Francis Arnold. Foot Stove and Lantern. April 11, 1854. (SI neg. 89-6676)

Patent No. 11,120. Samuel Fay. Double Woven Cloth. June 20, 1854. (SI neg. 91-18695)

Patent No. 13,370. Henry R. Worthington. Direct Acting Steam Pump. July 31, 1855. (SI neg. 86-6334)

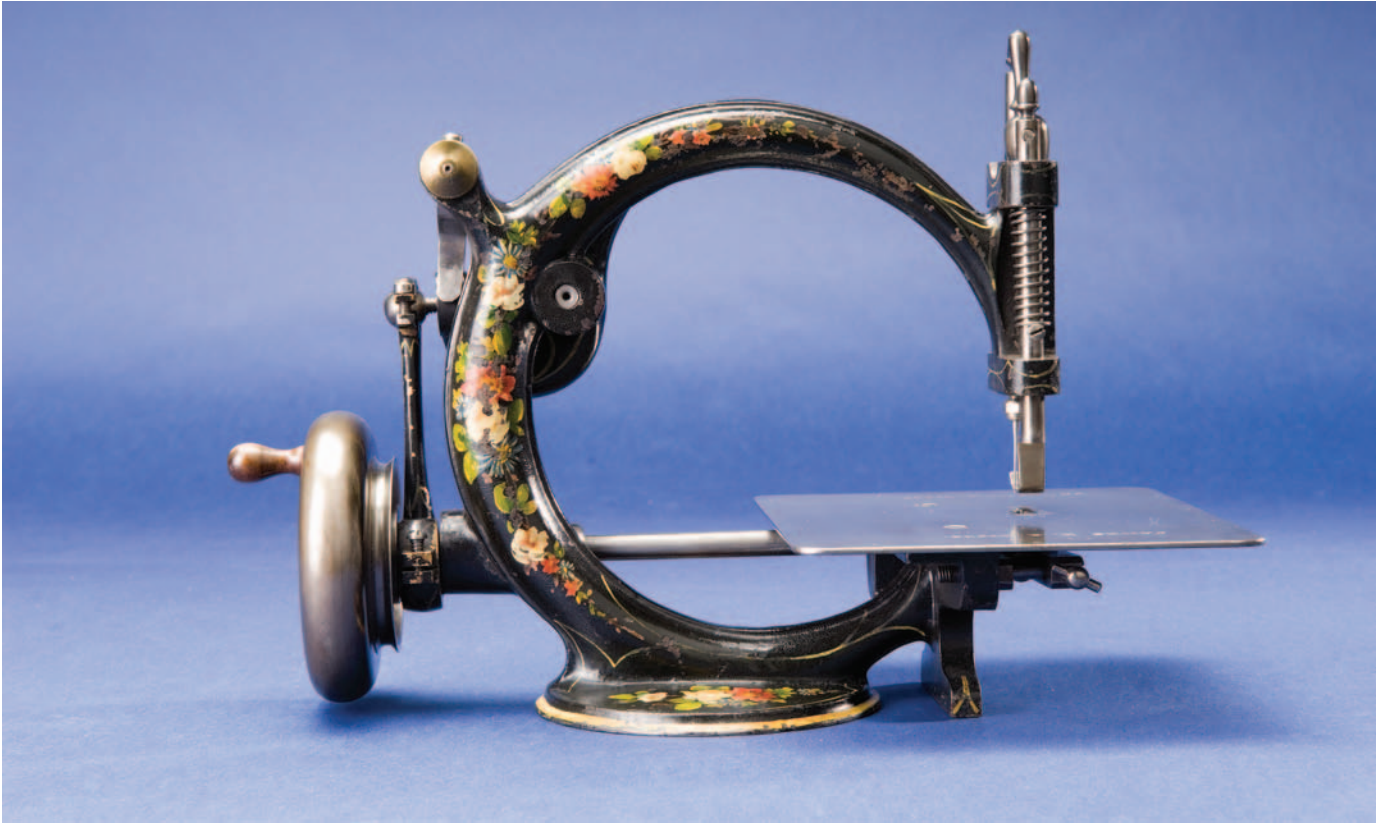

Patent No. 16,387. Albert F. Johnson. Sewing Machine. January 13, 1857. (SI neg. 83-15473-21)

Patent No. 17,427. James E. A. Gibbs. Sewing Machine. June 2, 1857. (SI neg. 2007-6314)

From left to right: Patent No. 19,129. David W. Clark. Sewing Machine. January 19, 1858. Patent No. 19,015. David W. Clark. Sewing Machine. January 5, 1858. Patent No. 21,322. David W. Clark. Sewing Machine. August 31, 1858. (SI neg. 86-5798)

---

Patent No. 21,129. James E. A. Gibbs. Sewing Machine. August 10, 1858. (SI neg. 2007-6320)

---

---

Patent No. 21,722. Joseph E. Hendrick. Sewing Machine. October 5, 1858. (SI neg. 83-15474.14A)

---

---

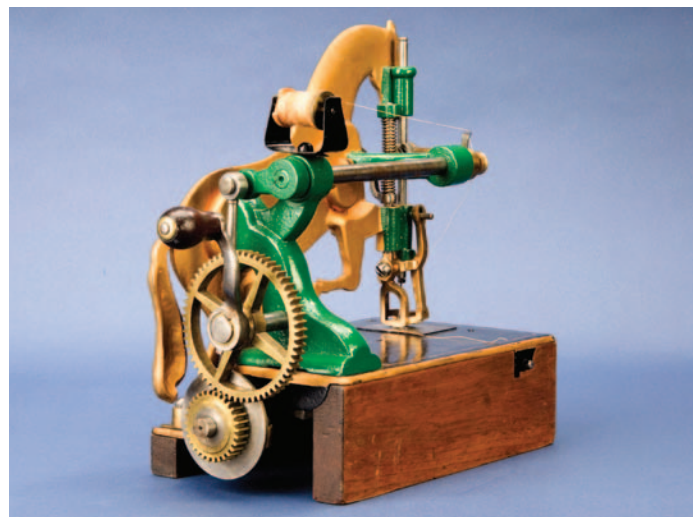

Patent No. 22,148. James Perry. Sewing Machine.  
November 23, 1858. (SI neg. 2005-36132)

---

---

Patent No. 22,148. Back view. (SI neg. 2005-36140)

---

Patent No. 22,148. Back view. (SI neg. 2005-36144)

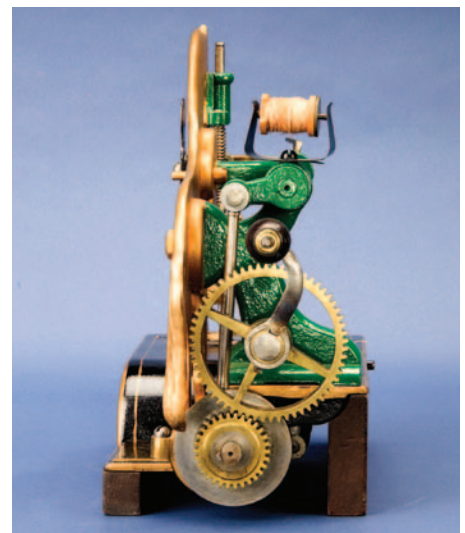

---

Patent No. 22,148. Side view. (SI neg. 2005-36135)

---

Patent No. 22,148. Side view. (SI neg. 2005-36137)

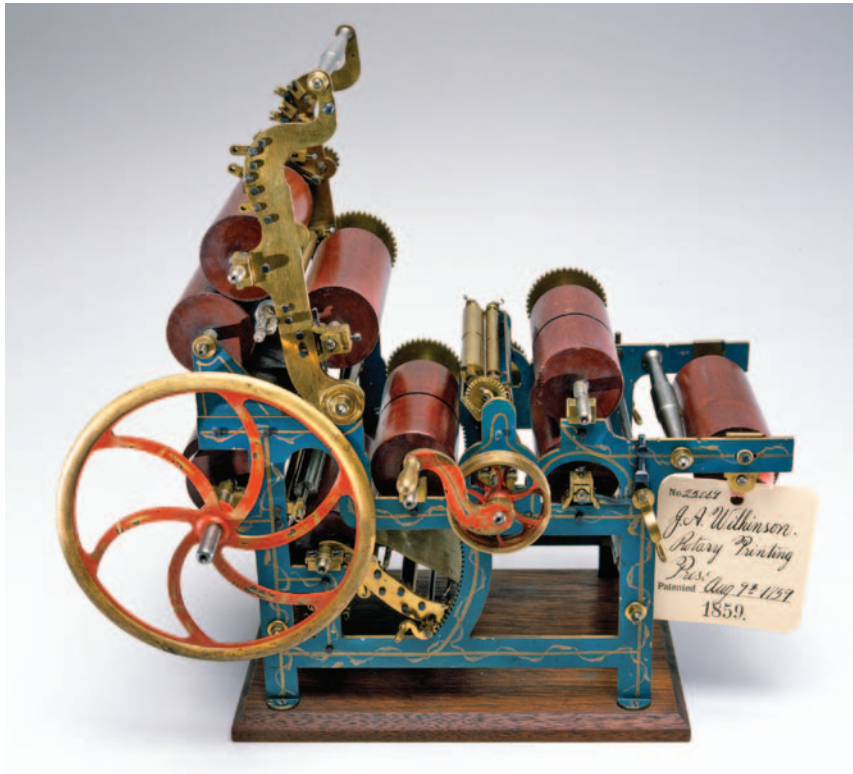

---

Patent No. 22,148. Side view. (SI neg. 2005-36146)

---

---

Patent No. 25,069. Jephtha A. Wilkinson. Printing Press. August 9, 1859. (SI neg. 83-13270)

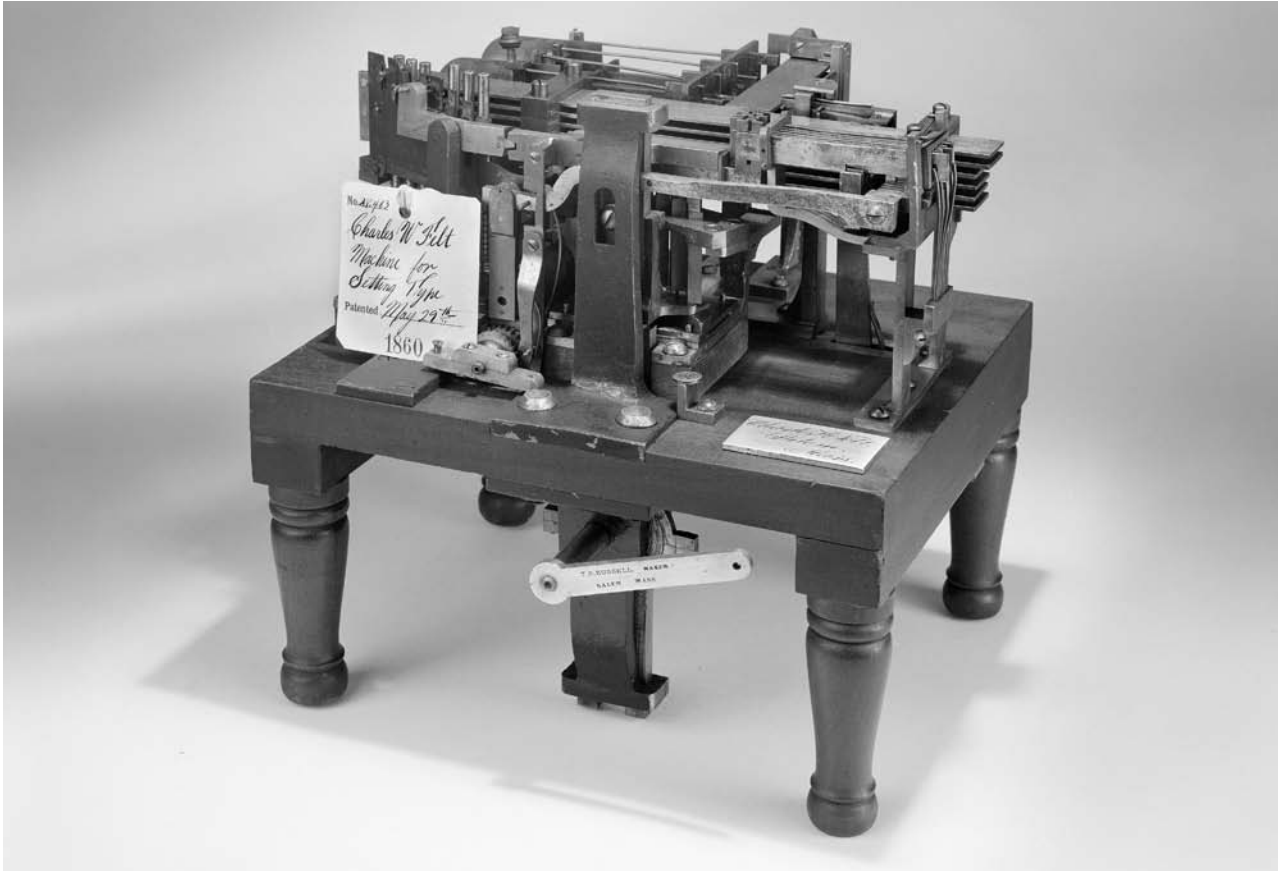

---

---

Left: Patent No. 26,390. William F. Yeager. Plow. December 6, 1859. Right: Patent No. 31,749. Daniel W. Smith. Shovel Plow. March 19, 1861. (SI neg. 86-6156)

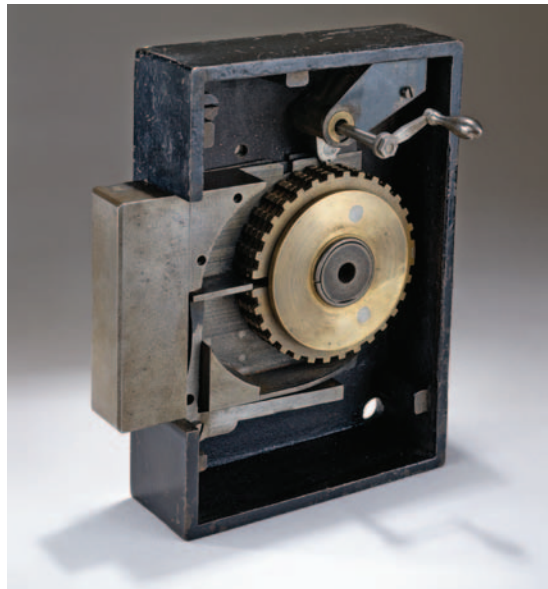

---

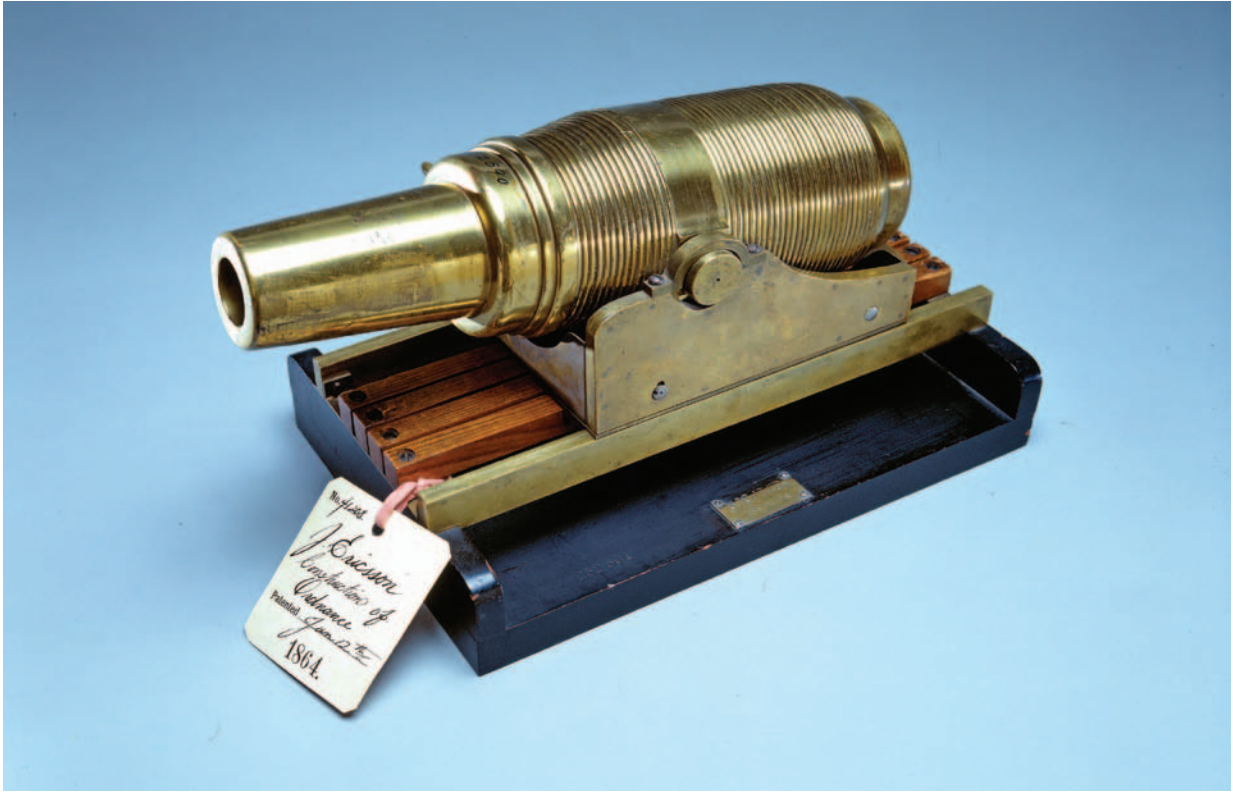

Patent No. 28,463. Charles W. Felt. Type-Setting Machine. May 29, 1860. (SI neg. 86-6169)

Patent No. 29,963. George Freeman. Wood Screw. September 11, 1860. (SI neg. 83-15472.21)

Patent No. 32,330. Linus Yale, Jr. Lock. May 14, 1861. (SI neg. 86-6336)

Patent No. 41,208. John Ericsson. Ordnance Construction. January 12, 1864. (SI neg. 85-18094)

Left: Patent No. 45,121. George O. Monroe. Fastening for Medals. November 15, 1864. Right: Patent No. 40,302. Simon Wing. Photographic Card Mount. October 13, 1863. (SI neg. 86-6559)

---

Patent No. 51,977. A. J. Stafford and S. Crossman. Washing Machine. January 9, 1866. (SI neg. 80-13964)

---

---

Patent No. 84,537. Stephen Culver. Stove. December 1, 1868. (SI neg. 89-6650)

---

---

Patent No. 94,112. George W. Hoffman. Sewing Machine. August 24, 1869. (SI neg. 86-9957)

---

---

Patent No. 105,080. George Horter. Saddle. July 5, 1870. (SI neg. 86-6553A)

---

---

Patent No. 107,140. William Westlake. Lantern. September 6, 1870. (SI neg. 83-15479.27)

---

Patent No. 115,255. George Thompson. Fan Attachment for Sewing Machines. May 23, 1871. (SI neg. 2006-1865)

Patent No. 115,255 (detail). Close-up of the Fan Attachment patent model. (SI neg. 2006-1868)

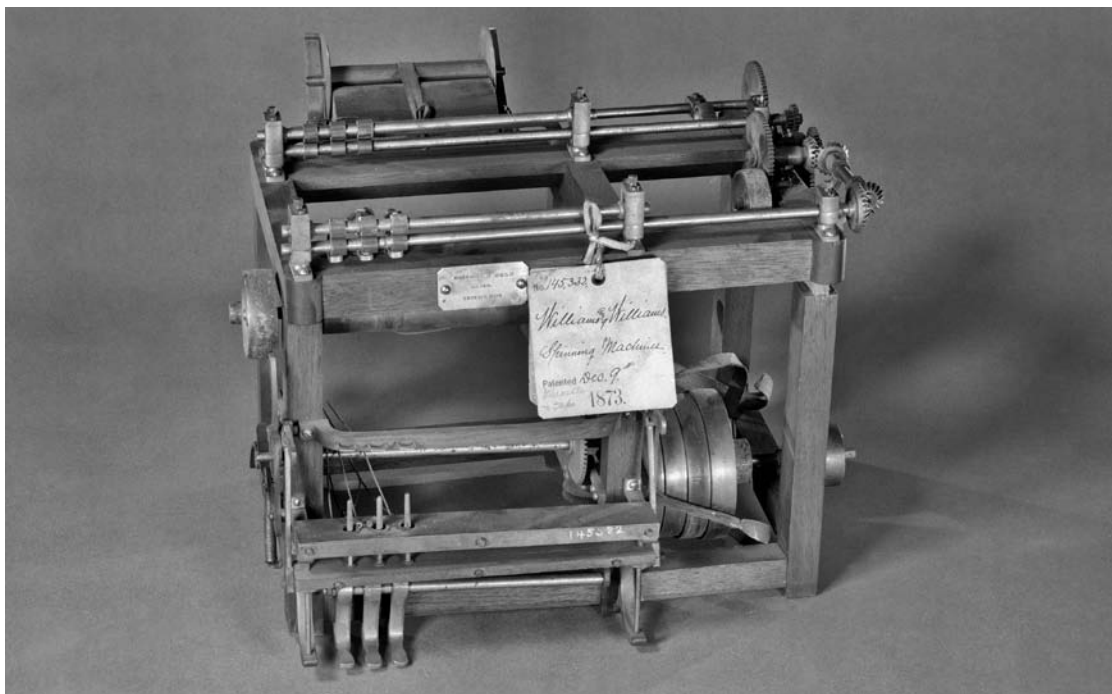

Patent No. 115,255 (detail). Plate identifying Fan Attachment patent model. (SI neg. 2006-1867)

Patent No. 118,537 and Patent No. 118,538. Solomon Jones. Electro-Motors for Sewing Machines. August 29, 1871. (SI neg. 2009-11222)

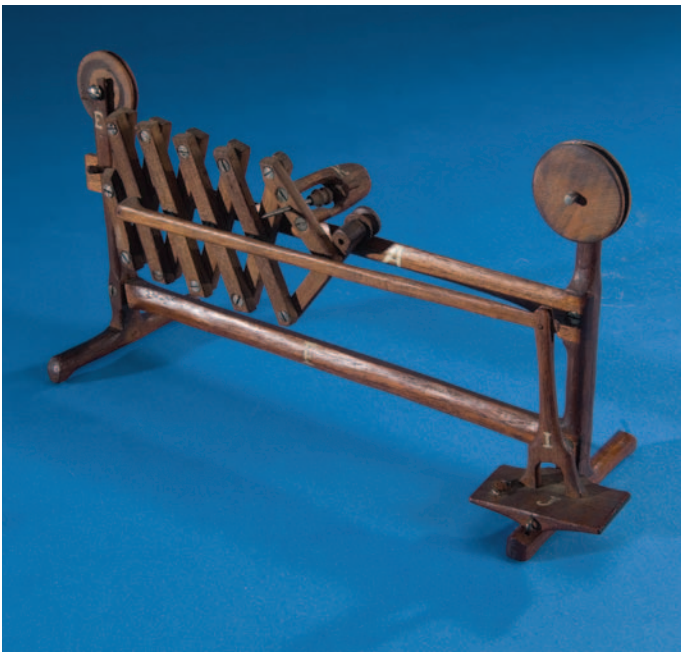

Patent No. 129,797. Andrew Dick. Locomotive Signal Light. July 23, 1872. (SI neg. 83-15476.17)

Patent No. 145,322. Chauncey Williams, Samuel M. Williams, and Henry M. Williams. Spinning Machine. December 9, 1873. (SI neg. 90-16422.8)

Patent No. 149,068. Charles Rogers. Steam Engine Valve. March 31, 1874. (SI neg. 86-6170)

Patent No. 154,969. Walter B. Walker. Spinning Wheel. September 15, 1874. Arms contracted. (SI neg. 2009-11199)

Patent No. 154,969. Spinning Wheel, arms extended. (SI neg. 2009-11196)

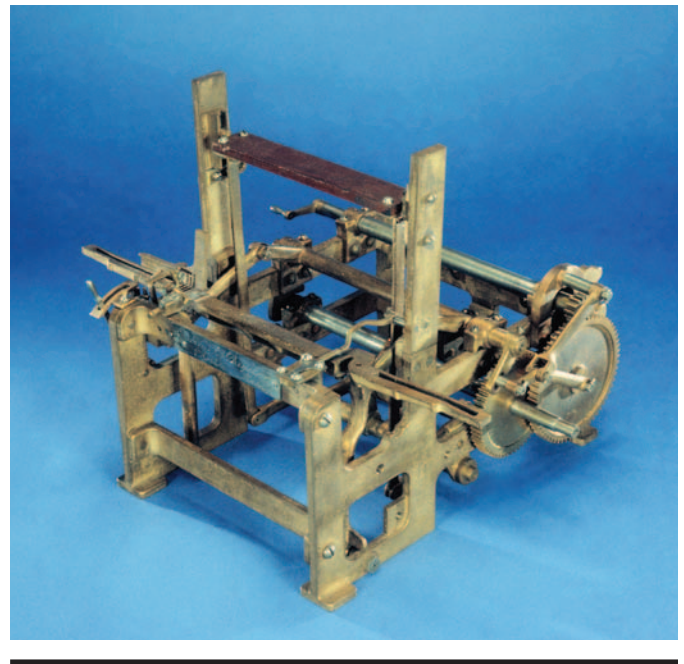

Patent No. 162,385. Samuel Homer, Jr. Carpet. April 20, 1875. (SI neg. 83-14915)

Patent No. 167,492. Helen A. Blanchard. Method of Uniting Knit Goods. September 7, 1875. (SI neg. 97-1900)

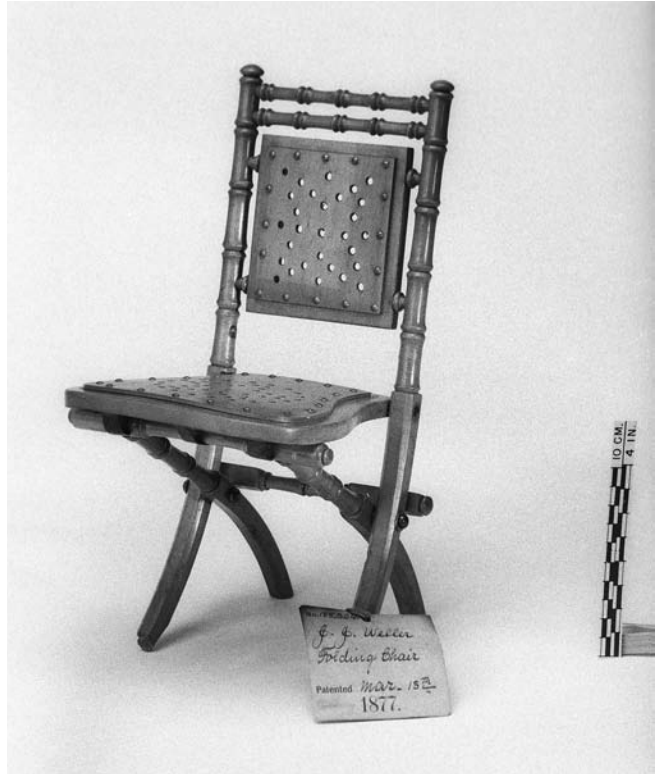

Patent No. 177,059. George H. Corliss. Valve Gear for Steam Engines. May 9, 1876. (SI neg. 86-6342)

Patent No. 177,920. Erastus B. Bigelow. Carpet Loom. May 30, 1876. (SI neg. 89-6651)

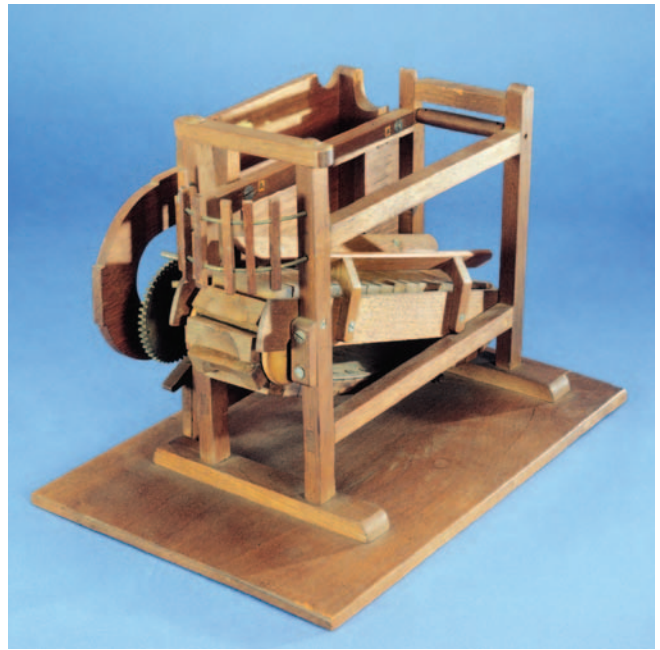

Patent No. 182,511. C. Latham Scholes and Matthias Schwalbach. Typewriter. September 19, 1876. (SI neg. 89-6582)

Patent No. 188,324. Jacob J. Weller. Folding Chair. March 13, 1877. (SI neg. 83-15989.23)

Patent No. 191,368. Sarah M. Rennie. Dustpan. May 29, 1877. (SI neg. 86-5806)

Patent No. 202,679. Frederick K. Traxler. Dog-Powered Treadmill. April 23, 1878. (SI neg. 89-6683)

Patent No. 205,623. Thaddeus Fairbanks. Platform Weighing Scales. July 2, 1878. (SI neg. 86-6325)

Patent No. 209,853. Jesse Benson. Windmill. November 12, 1878. (SI neg. 86-6550)

Patent No. 211,807. George Tremberger and Michael Stein. Life Boat. January 28, 1879. (SI neg. 86-5808)

Patent No. 212,941. Philip Jarvis. Bridge. March 4, 1879. (SI neg. 83-14413)

Patent No. 216,698. Henry B. Price. Wood Plane. June 17, 1879. (SI neg. 89-6705)

Patent No. 220,925. Margaret Knight. Paper Bag Making Machine. October 28, 1879. (S.I. neg.86-6161)

Back/left: Patent No. 225,361. Andrew French. Roller Skate. March 9, 1880. Front/right: Patent No. 77,901. Achille F. Migeon. Ice Skate. May 12, 1868. (SI neg. 86-6549)

Patent No. 226,673. Charles R. Otis and Norton P. Otis. Elevator. April 20, 1880. (SI neg. 86-6159)

Patent No. 233,331. Martin S. Davis. Fur-Covered Sleigh. October 19, 1878. (SI neg. 86-6173)

Patent No. 244,119. Alexander C. Frankel. Trunk Hinge. July 12, 1881. (SI neg. 86-5803)

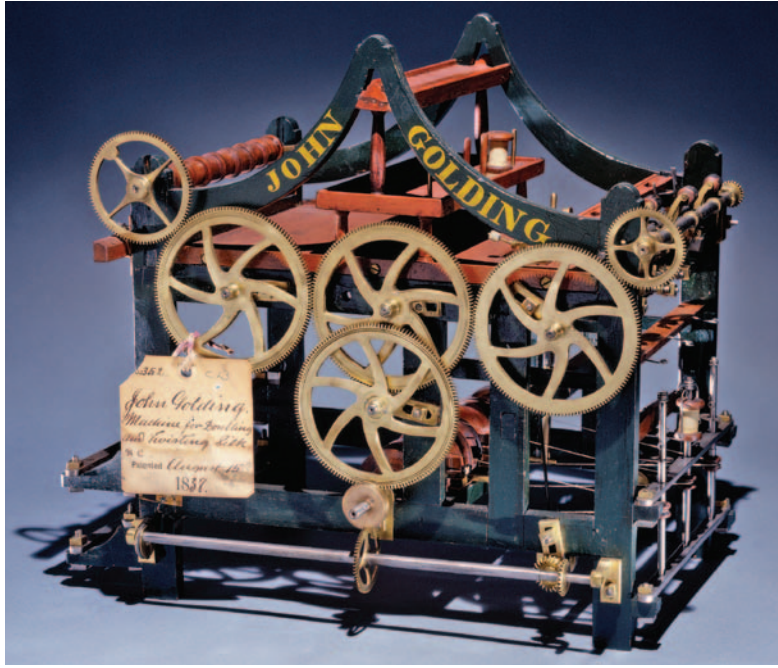

Patent No. 247,690. John C. Rodman. Minnow Bucket. September 27, 1881. (SI neg. 83-15992.4)

Patent No. 268,149. Mary E. Tillinghast. Needlework Tapestry. November 28, 1882. (SI neg. 91-18661)

Patent No. 287,808. Wilbur H. Davis and Alfred A. Hawley. Felted Woolen Sock. November 6, 1883. (SI neg. 97-1892)

Patent No. 352. John Golding. Machine for Doubling and Twisting Thread. August 16, 1837. (SI neg. 86-5800)

Patent No. 388,425. Elizabeth N. Little. Basket. August 28, 1888. (SI neg. 90-15658.7)

Patent No. 539,699. Max Moeller. Blue Dye. May 21, 1895. (SI neg. 86-6560)

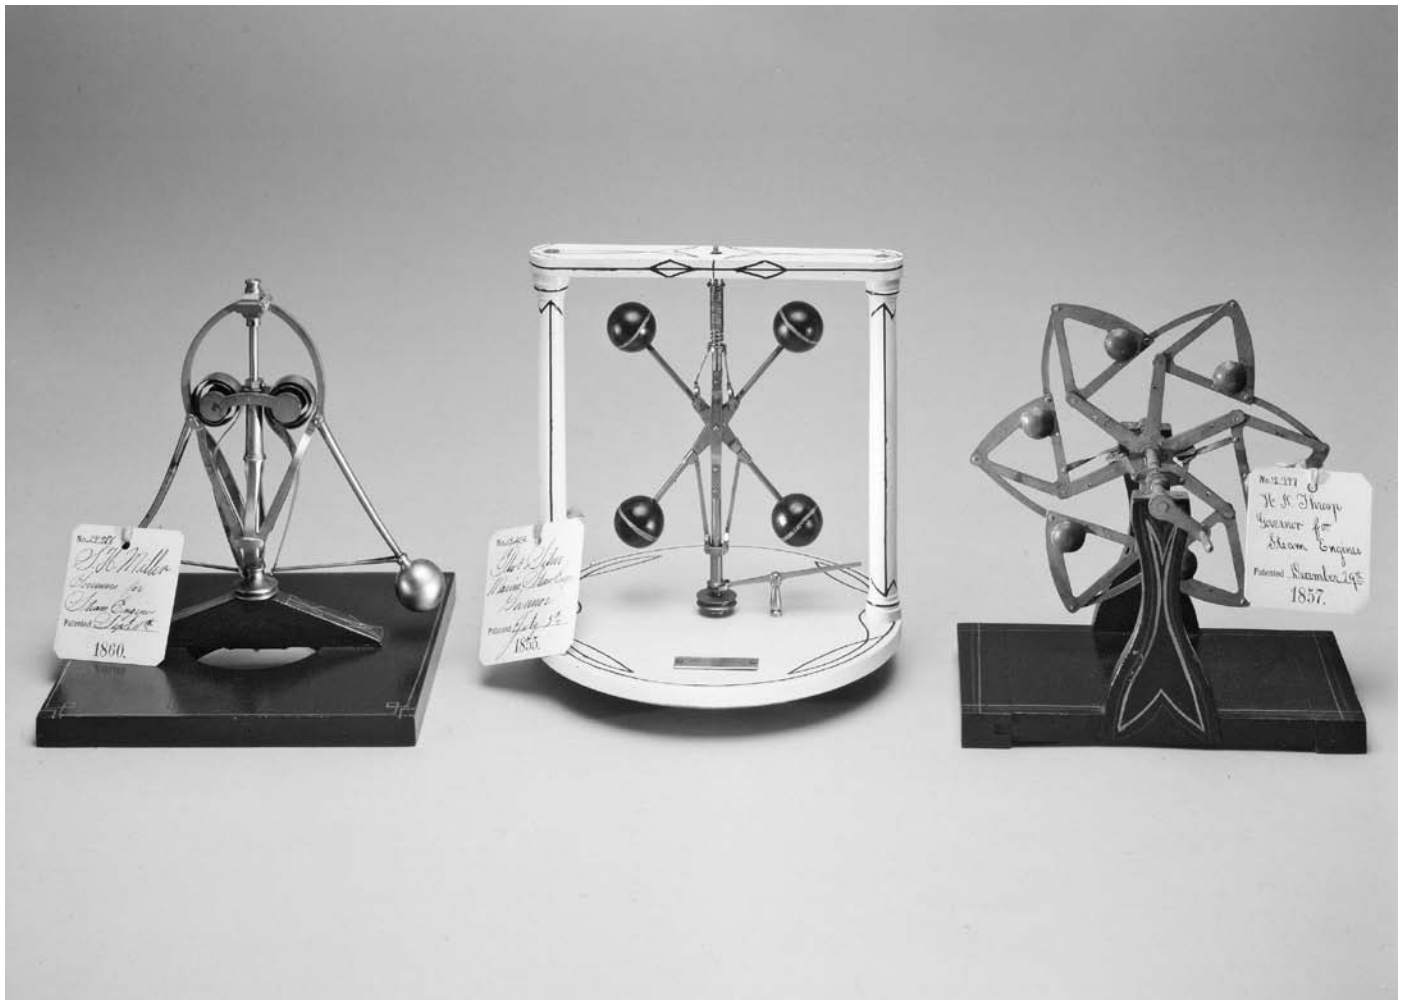

# Guide to the Listing by Residence of Inventor

---

The *Listing by Residence of Inventor* sorts the patent models by residence of the inventor at time of the patent issue by country, state, and city. The majority of patents are by inventors who resided in the United States. The first sort is alphabetical by country. For United States patents, the next sorts are by state and by city. Note that spelling of a city name matches that given in the patent specification at the time a patent was awarded; in some cases the modern city name is spelled differently or has been changed. For countries without states, a dash is displayed in the “state” field. If the city is the same for several patents, such as Boston, then the models are further sorted within the city by patent number. The last name of the inventor, and invention name is also included. Coinventors are not included in the *Listing by Residence of Inventor*.

Within the listings, a dagger (†) next to the patent number indicates that a photograph of the model is included in Volume 1; two daggers (††) indicate a photo is in Volume 2. See the Appendix for a complete list of all illustrations in the present volume.

Left: Patent No. 29,986. S. H. Miller. Steam Engine Governor. September 11, 1860. Center: Patent No. 13,202. Thomas Silver. Steam Engine Governor. July 3, 1855. Right: Patent No. 18,997. H. N. Throop. Steam Engine Governor. December 29, 1857. (SI neg. 83-13267).

*Listed in order of appearance, beginning on page 165*

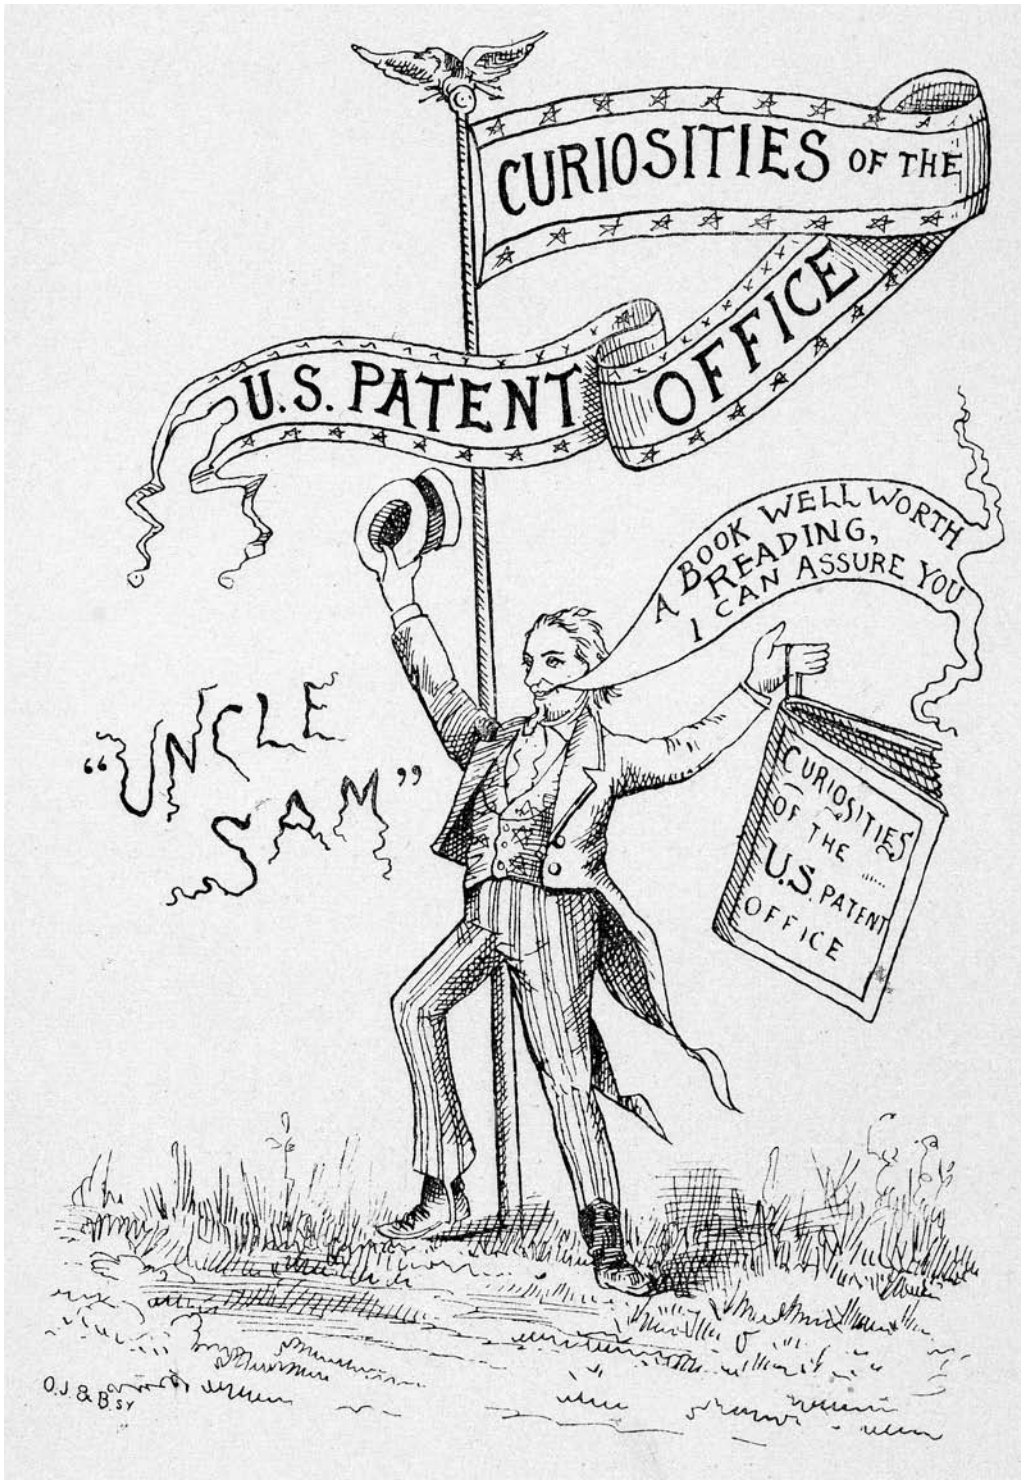

Patent No. 490. Hair Cloth Loom (SI neg. 80-16793)

Patent No. 2,489. Loom Shuttle (SI neg. 83-14922)

Patent No. 2,759. Locomotive (SI neg. 89-6732)

- Patent No. 6,818. Locomotive (SI neg. 89-6723)
- Patent Nos. 9,257, 20,364, 60,627, 119,938, and 365,755. Clothes Pins (SI neg. 2005-37591)
- Patent No. 60,627. Clothes Pin (SI neg. 2005-37593)
- Patent No. 10,769. Foot Stove and Lantern (SI neg. 89-6676)
- Patent No. 11,120. Double Woven Cloth (SI neg. 91-18695)
- Patent No. 13,370. Direct Acting Steam Pump (SI neg. 86-6334)
- Patent No. 16,387. Sewing Machine (SI neg. 83-15473-21)
- Patent No. 17,427. Sewing Machine (SI neg. 2007-6314)
- Patent Nos. 19,129, 19,015, and 21,322. Sewing Machines (SI neg. 86-5798)
- Patent No. 21,129. Sewing Machine (SI neg. 2007-6320)
- Patent No. 21,722. Sewing Machine (SI neg. 83-15474.14A)
- Patent No. 22,148. Sewing Machine (SI neg. 2005-36132)
- Patent No. 22,148. Back view (SI neg. 2005-36140)
- Patent No. 22,148. Back view (SI neg. 2005-36144)
- Patent No. 22,148. Side view (SI neg. 2005-36135)
- Patent No. 22,148. Side view (SI neg. 2005-36137)
- Patent No. 22,148. Side view (SI neg. 2005-36146)
- Patent No. 25,069. Printing Press (SI neg. 83-13270)
- Patent Nos. 26,390 and 31,749. Plows (SI neg. 86-6156)
- Patent No. 28,463. Type-Setting Machine (SI neg. 86-6169)
- Patent No. 29,963. Wood Screw (SI neg. 83-15472.21)
- Patent No. 32,330. Lock. (SI neg. 86-6336)
- Patent No. 41,208. Ordnance Construction (SI neg. 85-18094)
- Patent Nos. 45,121, Fastening for Medals, and 40,302, Photographic Card Mount (SI neg. 86-6559)
- Patent No. 51,977. Washing Machine (SI neg. 80-13964)
- Patent No. 84,537. Stove (SI neg. 89-6650)
- Patent No. 94,112. Sewing Machine (SI neg. 86-9957)
- Patent No. 105,080. Saddle (SI neg. 86-6553A)
- Patent No. 107,140. Lantern (SI neg. 83-15479.27)
- Patent No. 115,255. Fan for Sewing Machines (SI neg. 2006-1865)
- Patent No. 115,255. Detail (SI neg. 2006-1868)
- Patent No. 115,255. Detail (SI neg. 2006-1867)
- Patent Nos. 118,537 and 118,538. Electro-Motors for Sewing Machines (SI neg. 2009-11222)
- Patent No. 129,797. Locomotive Signal (SI neg. 83-15476.17)
- Patent No. 145,322. Spinning Machine (SI neg. 90-16422.8)
- Patent No. 149,068. Steam Engine Valve (SI neg. 86-6170)
- Patent No. 154,969. Spinning Wheel (SI neg. 2009-11199)
- Patent No. 154,969. Alternate View (SI neg. 2009-11196)
- Patent No. 162,385. Carpet (SI neg. 83-14915)
- Patent No. 167,492. Method of Uniting Knits (SI neg. 97-1900)
- Patent No. 177,059. Valve Gear for Steam Engines (SI neg. 86-6342)
- Patent No. 177,920. Carpet Loom (SI neg. 89-6651)
- Patent No. 182,511. Typewriter (SI neg. 89-6582)
- Patent No. 188,324. Folding Chair (SI neg. 83-15989.23)
- Patent No. 191,368. Dustpan (SI neg. 86-5806)
- Patent No. 202,679. Dog Powered Treadmill (SI neg. 89-6683)
- Patent No. 205,623. Platform Weighing Scales (SI neg. 86-6325)

Patent No. 209,853. Windmill (SI neg. 86-6550)  
Patent No. 211,807. Life Boat (SI neg. 86-5808)  
Patent No. 212,941. Truss Bridge (SI neg. 83-14413)  
Patent No. 216,698. Wood Plane (SI neg. 89-6705)  
Patent No. 220,925. Paper Bag Making Machine (S.I. neg.86-6161)  
Patent Nos. 225,361, Roller Skate, and 77,901, Ice Skate (SI neg. 86-6549)  
Patent No. 226,673. Elevator (SI neg. 86-6159)  
Patent No. 233,331. Fur-Covered Sleigh (SI neg. 86-6173)  
Patent No. 244,119. Trunk Hinge (SI neg. 86-5803)  
Patent No. 247,690. Minnow Bucket (SI neg. 83-15992.4)  
Patent No. 268,149. Needlework Tapestry (SI neg. 91-18661)  
Patent No. 287,808. Felted Woolen Sock (SI neg. 97-1892)  
Patent No. 352. Machine for Doubling and Twisting Thread (SI neg.  
86-5800)  
Patent No. 388,425. Basket (SI neg. 90-15658.7)  
Patent No. 539,699. Blue Dye (SI neg. 86-6560)

“Uncle Sam” character recommends reading *Curiosities of the U.S. Patent Office*, written by William Chandler Raymond in 1888. (SI neg. 83-14630)

# Selected Bibliography

---

Smithsonian exhibitions are even more ephemeral than the Patent Office's *Museum of Models* was in the nineteenth century. Viewable briefly at one point in history, they then are dismantled and the artifacts removed to storage. The record of an exhibition may be captured in a catalog, a newspaper, or a magazine review, but most often the exhibit is only a fleeting memory for those who saw it.

In this bibliography I feature publications that accompanied patent model exhibitions and catalogs written by curators to document their collections. Writings from the 1930s may seem stilted by today's latest social theory of technology and invention, but the catalogs stand as foundations of information about the models upon which other thoughts may be built or, if desired, deconstructed. Included are publications chronicling the history of the United States Patent Office and indexes for patents and their inventors in the nineteenth century.

Various publications are available that provide information on nineteenth century patents. The most useful are probably the series *Annual Report of the Commissioner of Patents*—started in 1841 and containing patent listings arranged by invention (class), patentee's name, and/or patent number—and the three volume set *Subject-Matter Index of Patents for Inventions Issued by the United States Patent Office from 1790 to 1873*, which lists patents in an alphabetical form by invention.

Since this project began, the Patent Office has set up a web site where patent specifications and drawings may be retrieved. In addition GOOGLE Patent Search provides searchable access to the patent specifications and drawings. Before the advent of these web sites, the best source for patent specifications and drawings was the microfilm series *United States Patents, 1790–1906*, available at libraries throughout the country designated as Patent Office Depository Libraries.

## REQUIREMENTS FOR SMITHSONIAN SERIES PUBLICATION

ALL MANUSCRIPTS ARE REVIEWED FOR ADHERENCE TO THE SISP MANUSCRIPT PREPARATION AND STYLE GUIDE FOR AUTHORS (available on the “Submissions” page at [www.scholarlypress.si.edu](http://www.scholarlypress.si.edu)). Manuscripts not in compliance will be returned to the author. Manuscripts intended for publication in the Contributions Series are evaluated by a content review board and undergo substantive peer review. Accepted manuscripts are submitted for funding approval and scheduling to the Publications Oversight Board.

MINIMUM MANUSCRIPT LENGTH is thirty manuscript pages. If a manuscript is longer than average, an appropriate length will be determined during peer review and evaluation by the Content Review Board. Authors may be asked to edit manuscripts that are determined to be too long.

TEXT must be prepared in a recent version of Microsoft Word; use a Times font in 12 point for regular text; be double spaced; and have 1" margins. Each chapter/section must be saved in a separate file.

REQUIRED ELEMENTS are title page, abstract page, table of contents, main text, and reference section. See the SISP Manuscript Preparation and Style Guide for Authors for the order of all elements.

HEADINGS should be styled so different levels of headings are distinct from each other and so the organization of the manuscript is clear. Insert one line space above and one line space below all headings.

FRONT MATTER should include title page, abstract page, and table of contents. All other sections are optional. Abstracts must not exceed 300 words. Table of contents should include A-, B-, and C-level headings.

TABLES (numbered, with captions, stubs, rules) should be submitted in separate MS Word files; should include footnotes, if appropriate; should have rules only at top, bottom, and beneath column heads. Printouts of each table should accompany the manuscript to ensure correct layout of data. Tabulations within running text should not be numbered or formatted like formal tables, and should be included in the text of the manuscript.

FIGURE CAPTIONS should be provided in a separate MS Word file.

FIGURES (e.g., photographs, line art, maps) should be numbered sequentially (1, 2, 3, etc.) in the order called out; be placed throughout text, not at end of manuscript; have all components of composites lettered with lowercase letters and described in the caption; include a scale bar or scale description, if appropriate; include any legends in or on the figure rather than in a caption.

ART must not be embedded in the main text.

Figures must be original and submitted as individual TIFF or EPS files. Resolution for art files must be at least 300 dpi for grayscale and color images and at least 1200 dpi for line art. Electronic images should measure no more than 100% and no less than 75% of final size when published. JPG files will not be accepted. Color images significantly increase costs so should be included only if required. Funding for color art is subject to approval by SISP and the Publications Oversight Board.

IN-TEXT REFERENCES should be used rather than bibliographic notes and should follow the author-date system in the following format: “(author last name, year)” or “. . . author (year)”; “(author, year:page used within the text)” or “. . . author (year:page).” A full citation should be included in a “References” section.

ENDNOTES are to be used in lieu of footnotes and should be keyed manually into a separate MS Word file, in a section titled “Notes.” Notes should not contain bibliographic information. Manually type superscript numerals in text and use full-sized numerals at the beginning of each note in the “Notes” section. SISP will determine the best placement of the notes section, either at the end of each chapter or at the end of the main text.

REFERENCES should be in alphabetical order, and in chronological order for same-author entries. Each reference should be cited at least once in main text. Complete bibliographic information must be included in all citations (e.g., author/editor, title, subtitle, edition, volume, issue, pages, figures). For books, place of publication and publisher are required. For journals, use the parentheses system for volume(number):pagination [e.g., “10(2):5–9”]. Do not use “et al.”; all authors/editors should be included in reference citations. In titles, capitalize first word, last word, first word after colon, and all other words except articles, conjunctions, and prepositions. Examples of the most common types of citations are provided in the SISP Manuscript Preparation and Author Style Guide.

For questions regarding the guidelines, please email SISP at [schol.press@si.edu](mailto:schol.press@si.edu).
